REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour of submitting for Your Excellency's consideration the Forty-fourth Annual Detailed Report, on the Marriages, Births, and Deaths registered in Ireland during the year 1907.

GENERAL SUMMARY.

In Table I. on this page it may be seen that the number of Marriages registered in Ireland during the year 1907, was 22,509; the number of Births, 101,742; and the number of Deaths, 77,334. The marriage-rate was 5.14 per 1,000 of the estimated population, showing a decrease of 0.02 as compared with that for the year 1906, but is 0.05 above the average rate for the ten years 1897-1906; the birth-rate was 29.2 per 1,000 of the estimated population, showing a decrease of 0.4 as compared with that for the preceding year, and is the same as the average rate for the ten years 1897-1906; and the death rate (17.7 per 1,000) is 0.7 above the rate for the preceding year, but 0.2 under the average rate for the ten years 1897-1906.

The returns for the year 1907 show that the natural increase of population, or excess of births over deaths, was 24,408; the loss by emigration amounted to 39,082 (which number exceeds the number of Emigrants enumerated in 1906, namely, 35,344, and also the average number—37,381—for the ten years 1897-1906). It would appear, therefore, that there was a decrease of 14,674 in the population during the year; with respect to immigration, there is no official record, nor is it taken into account in the estimate of the population to the middle of the year which was 4,377,064.

TABLE I.—Showing for each of the years 1897-1907 the estimated Population*; the number of Marriages, Births, and Deaths registered, and the number of Emigrants enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1897-1906.

| Years | * Estimated Population to the middle of each year | Numbers Registered | | | Number of Emigrants as returned by the Emigration Office | Rate per 1,000 of Estimated Population | | | |
|------------------------------|---|--------------------|---------|--------|--|--|--------|--------|-----------|
| | | Marriages | Births | Deaths | | Marriages | Births | Deaths | Emigrants |
| 1897 | 4,555,517 | 22,502 | 136,564 | 82,525 | 22,502 | 5.05 | 29.8 | 18.3 | 7.2 |
| 1898 | 4,532,475 | 22,509 | 135,571 | 81,464 | 22,502 | 5.05 | 29.8 | 18.0 | 7.1 |
| 1899 | 4,530,423 | 22,521 | 135,206 | 79,889 | 22,521 | 5.05 | 29.8 | 17.7 | 6.9 |
| 1900 | 4,495,001 | 22,530 | 134,460 | 77,719 | 22,530 | 5.05 | 29.7 | 17.6 | 6.8 |
| 1901 | 4,462,580 | 22,534 | 133,716 | 75,113 | 22,534 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1902 | 4,432,374 | 22,549 | 133,555 | 73,075 | 22,549 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1903 | 4,413,583 | 22,550 | 133,555 | 71,525 | 22,550 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1904 | 4,408,539 | 22,561 | 133,555 | 70,535 | 22,561 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1905 | 4,381,565 | 22,575 | 133,555 | 69,571 | 22,575 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1906 | 4,350,006 | 22,582 | 133,555 | 68,535 | 22,582 | 5.05 | 29.7 | 17.5 | 6.7 |
| Ten Years Average, 1897-1906 | 4,438,554 | 22,550 | 133,555 | 70,571 | 22,550 | 5.05 | 29.7 | 17.5 | 6.7 |
| 1907 | 4,377,064 | 22,509 | 101,742 | 77,334 | 39,082 | 5.14 | 29.2 | 17.7 | 8.9 |

Diagram (No. 1), shows the respective rates per 1,000 of the population, represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1888-1907, and by the number of Emigrants enumerated in each of these years.

* See page 145.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,687. The cases of vacancies or appointments which were dealt with during the year 1907, number 614.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1907, numbered 775 of the former and 660 of the latter); also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES MADE; NUMBER OF CERTIFICATES ISSUED, AND AMOUNT RECEIVED AS FEE FOR SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 44 years 1864-1907.

| Year. | Annual Number of Searches in the Registers. | Annual Number of Certificates. | Amount received as fees for searches, &c., and paid into His Majesty's Exchequer. | Year. | Annual Number of Searches in the Registers. | Annual Number of Certificates. | Amount received as fees for searches, &c., and paid into His Majesty's Exchequer. |

Offences against the Acts administered by this Department reported during the financial year ended 31st March last, numbered 556. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 45 cases. In 83 of these the parties were convicted and punished; 2 were dismissed; and in 10 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law.

Amongst the offences dealt with the following are included:—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; failure of Registrar to deliver certified copies of entries to Superintendent Registrar; neglect to comply with Requisition to correct entry.

A sum of £120 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £85 9s. 0d., of which sum £40 17s. 6d. was paid for local professional assistance, and £4 6s. 0d. for mileage to the Registrars.

MARRIAGES.

There were 22,509 Marriages registered during the year, corresponding to 5.14 per 1,000 of the estimated population,* which rate is 0.02 below that for the previous year, but 0.05 above the average for the ten years 1897-1906.

Of the 22,509 Marriages registered during last year, 15,571 were between Roman Catholics; 3,668 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,347 were in Presbyterian Meeting-houses; 479 in "Registered Buildings" belonging to various religious denominations; only 422 by civil contract in the Registrars' offices; 7 were according to the usages of the Society of Friends; and 15 according to the Jewish rites.

The Roman Catholic Marriage rate is 4.79 per 1,000 of the Roman Catholic population estimated to the middle of 1907, or 0.05 over the corresponding average rate for the preceding ten years, and the other Marriages represent a rate of 6.15 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0.10 over the corresponding average rate for the ten years ending with 1906.

The 3,668 Marriages celebrated according to the rites of the Church of Ireland, include 44 by special licence, 3,040 by licence, 556 after the publication of banns, 3 on Registrar's certificate, and in 25 instances no information was afforded as to which of these methods was adopted.

*The rates for the total of Ireland and for the county boroughs of Dublin and Belfast and for Londonderry county and county borough are based on the estimated population in the middle of the respective years, those for the provinces for the years 1906-1907, and for the remaining counties for the year 1907 on the population according to the Census of 1901, and those for the provinces for the years 1898-1906 on the population according to the Census of 1891. The provinces and counties adopted for 1898-1907 are the areas as constituted after alterations made under the Local Government (Ireland) Act, 1898.

TABLE IV.—*Marriages registered in Ireland in 1907, and in each of the previous ten years, according to the modes of celebration; with the rate per 1,000 of the population represented:—*

The number of Licences for Marriages issued by the Registrars during the year 1907 in Registered Buildings and in the Registrars' Offices was 787.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

| Presbytery or Synod. | Number of Licences issued on 31st December, 1907. | Number of Registered Meeting-houses on 31st December, 1907. | Number of Licences issued. |
|--|---|---|----------------------------|
| 1. General Assembly of the Presbyterian Church in Ireland. | 102 | 226 | 2,475 |
| 2. Synod of Ulster. | 10 | 19 | 54 |
| 3. Presbytery of Antrim. | 6 | 10 | 17 |
| 4. District Presbytery of Synod of Minister. | 1 | 2 | 7 |
| 5. Presbytery of Ireland (United Free Church of Scotland). | 5 | 9 | 70 |
| Total. | 124 | 266 | 2,563 |

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized without special licence. From this it appears that, on the 31st December, 1907, there were 1,488 churches and chapels of the Church of Ireland, 636 registered Presbyterian Meeting-houses, and 411 "Registered Buildings" belonging to various religious denominations. These numbers show a decrease of 1 as regards the Church of Ireland, a decrease of 2 in the number of Presbyterian Meeting-houses; and an increase of 1 in the total number of "Registered Buildings" as compared with the previous year.

The following list shows the number of "Registered Buildings" belonging to the several religious bodies as revised for the year, 1907.

| Denominations. | No. of Places of Worship. | Denominations. | No. of Places of Worship. | Denominations. | No. of Places of Worship. |
|--------------------------------------|---------------------------|----------------------------------|---------------------------|-----------------------------|---------------------------|
| Methodists. | 226 | Salvation Army. | 9 | United Original Seceders. | 1 |
| Reformed Presbyterians. | 38 | Seceders. | 8 | "Un denominational." | 1 |
| Independents, or Congregationalists. | 29 | Non-Suscribing Unitarians. | 5 | Jews. | 1 |
| Baptists. | 27 | "The Catholic Apostolic Church." | 9 | "Holiness Movement" Church. | 1 |
| Christian Brethren. | 22 | Covenanters. | 1 | | |
| Moravians, or United Brethren. | 9 | Welsh Presbyterians. | 1 | Total. | 411 |

Of the 23,509 marriages registered during the year 1907, there were 6,023 recorded in the first quarter, 5,643 in the second, 5,609 in the third, and 5,229 in the fourth.

As derived from the numbers given in the Abstract of Marriages, commencing on page 2, it would appear that the marriages of bachelors with spinsters formed 80·3 per cent. of the total; that those of widowers and spinsters was 6·8 per cent.; that the marriages of bachelors and widows was 2·4 per cent.; and that those of widowers and widows formed 1·0 per cent. of the total marriages. Thus of the men married 8·4 per cent. were widowers, and 4·0 per cent. of the women were widows; and in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1897-1907, and the average number for the ten years 1897-1906, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

As a complete record of the ages of the persons married would be valuable, it is therefore with regret I have to report an increasing majority of instances in which the ages of the persons married are not stated. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1907 the ages of both parties were specified in 2,881 cases only, being nearly one-eighth of the total number of marriages. In the year 1895, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances. In England and Wales, in the year 1906, only 0·91 per cent. of the husbands and 0·99 per cent. of the wives failed to make definite statement of age in the marriage register.

Of 22,509 men married during the year, the number of minors was 824, or 1·44 per cent.; and of the women married 1,175, or 5·22 per cent., were under age.

The highest proportion of husbands (1·62 per cent.) who married under age in 1907 was in the province of Ulster, and of wives (6·68 per cent.) was also in the province of Ulster.

The percentage of persons married in Ireland, who were under age, it may be observed, is very far below the corresponding percentages in England and Scotland.

A crude test of the progress of elementary education is afforded by the signatures of the contracting persons, as seen in the marriage-registers or certificates. In the year 1907, 20,706, or 92·0 per cent., of the husbands, and 21,164, or 94·0 per cent., of the wives, wrote their names, and the remainder signed by marks, as against 19,421, or 84·6 per cent., of the husbands, and 19,857, or 86·7 per cent., of the wives, in the

year 1897; 16,294, or 77·8 per cent., of the husbands, and 15,753, or 75·2 per cent., of the wives, in the year 1887; and 17,217, or 69·6 per cent., of the husbands, and 15,816, or 64·9 per cent., of the wives, in the year 1877.

The percentages for 1907, when compared with the corresponding results in the first of the preceding ten years, show a considerable improvement, the percentage of men married in 1897 who wrote their names, being—81·8, and of women 86·7; and they exhibit a great advance when compared with the percentage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

For the several provinces the percentages among men during the year 1907, range from 89 in Connaught to 98 in Leinster and Munster; and, for women, from 93 in Connaught to 96 in Munster.

Both of the persons married signed the register by "mark" in 532 cases, and the register was thus signed by either the husband or the wife in 2,085 cases, so that in 2,617 cases, or 11·8 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 19,892 or 88·4 per cent., both parties wrote their names.

In the following table the proportion per cent. of persons married in each of the eleven years 1897-1907, who wrote their names in the registers or certificates; of minors; of widowers; and of widows; is given for Ireland, and for each of the four provinces.

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1897-1907, the proportion per cent. of Persons who **signed their names**, of Persons **not of Full Age**, and of **Re-marriages**.

| Provinces, &c. | Signed their Names in Register | | Persons not of Full Age | | Re-marriages | | Provinces, &c. | Signed their Names in Register | | Persons not of Full Age | | Re-marriages | | | |

In the province of Ulster, the highest provincial marriage rate per 1,000 of the population according to the Census of 1901 was recorded. The rate for that province, however, being only 5·6 per 1,000 of the population of the province; Leinster comes next with 5·5 per 1,000; Munster third, with 4·5 per 1,000; and Connaught last, the rate being 3·7 per 1,000.

For county, or county borough areas, the highest marriage rate (8·0 per 1,000 of the population) was in the county borough of Dublin, and in the county borough of Belfast; and the lowest 3·2 in each of the counties of Galway and Roscommon. Between these extremes the most favourable rates were 5·6 for the county of Dublin, and 5·3 for the county of Down, and the least so 3·4 for the county of Longford, 3·6 for the county of Tipperary N.R., and 3·7 for the counties of Kilkenny, Meath, Kerry, Cavan, Carlow, and Clare.

BIRTHS.

The births registered during the year 1907, namely, 101,742 include 52,171 boys, and 49,571 girls, or 105·2 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·0, or 23·2 per thousand, which is equal to the average rate per 1,000 for the ten years, 1897-1906.

Of the 101,742 children whose births were registered in Ireland during the year 1907, 99,178, or 97·5 per cent. were legitimate, and 2,564, or 2·5 per cent. were illegitimate, the latter being 0·1 below the corresponding average percentage for the preceding 10 years. These results bear favourable comparison with the returns for most other countries.

The number of male children born in wedlock during the year was 50,896 and of female, 48,282, or 105·4 of the former to every 100 of the latter; of the illegitimate children 1,275 were males and 1,289 females, being 99·9 boys to 100 girls.

Of the children born in Ulster, 3·3 per cent. were illegitimate; in Leinster, the percentage was 2·7; in Munster, 2·1; and in Connaught 0·6, as shown in Table VII.

TABLE VII.—The Percentage of Legitimate and of Illegitimate Births registered in Ireland during the years 1903-1907 by Province.

| Provinces | Proportion per cent. of Legitimate Births. | | | | | Proportion per cent. of Illegitimate Births. | | | | |
|-----------|--|------|------|------|------|--|------|------|------|------|
| | 1903 | 1904 | 1905 | 1906 | 1907 | 1903 | 1904 | 1905 | 1906 | 1907 |
| IRELAND | 97·4 | 97·3 | 97·6 | 97·4 | 97·5 | 2·6 | 2·6 | 2·4 | 2·6 | 2·5 |
| LEINSTER | 97·4 | 97·4 | 97·5 | 97·5 | 97·3 | 2·6 | 2·6 | 2·5 | 2·5 | 2·7 |
| MUNSTER | 97·7 | 97·5 | 97·7 | 97·6 | 97·9 | 2·3 | 2·5 | 2·3 | 2·4 | 2·1 |
| ULSTER | 96·7 | 96·6 | 96·5 | 96·3 | 96·7 | 3·3 | 3·4 | 3·5 | 3·6 | 3·3 |
| CONNAUGHT | 99·5 | 99·2 | 99·3 | 99·3 | 99·6 | 0·5 | 0·7 | 0·7 | 0·7 | 0·6 |

The provincial rates represented by the total births registered during the year 1907 were—Leinster, 23·2 per 1,000 of the population in 1901; Munster, 21·7; Ulster, 24·2; and Connaught, 20·5.

The four highest birth-rates for the county or county borough areas were 31·7 for Dublin county borough; 30·6 for Belfast county borough; 23·6 for county Kildare; and 23·3 for Limerick county and county borough. The four lowest rates were—17·7 for county Roscommon; 18·0 for county Cavan; 18·4 for Queen's county; and 18·6 for county Leitrim.

Of the total births 51·8 per cent. were registered in the first six months of the year (181 days), and 48·2 per cent. in the second half of the year (184 days).

In the first quarter of the year the total number of births registered was 26,123; in the second, 26,624; in the third, 24,930; and in the fourth, 24,066.

DEATHS.

The number of deaths registered in Ireland during the year 1907, was 77,334, equivalent to 1 in 57, or 17·7 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 38,618, and those of females to 38,716, the rate per 1,000 males and 1,000 females, respectively, being 17·8 and 17·6.

The death-rate (17·7) is 0·7 above that for the year 1906, but 0·2 under the average rate for the preceding ten years.

As heretofore, many of the Registrars have furnished me with valuable notes on the sanitary condition of their respective districts appended to their Quarterly Reports. These notes were published in the Quarterly Returns issued from this Department, and it is most desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

For the four provinces the recorded death-rates are as follows:—Connaught, 18·5; Munster, 16·5; Ulster, 18·7; and Leinster, 19·4 per 1,000 of the population according to the Census of 1901.

The six county or county borough areas having the lowest mortality rates per 1,000 of the population were:—County Kerry, 12·7; county Mayo, 12·9; county Roscommon, 13·1; county Galway, 13·6; and county Clare and county Tipperary, N.R., 14·0 each.

The highest rates are as follows:—Dublin county borough, 25·6; Belfast county borough, 21·0; county Armagh, 19·9; county Monaghan, 19·4; county Down, 18·4; and county Tyrone, 18·4.

The number of deaths registered in the first half of the year generally exceeds the number registered in the second half, the deaths registered in the six months of 1907, January to June inclusive, constituting 56·5 per cent. of the total for the year, and those in the remaining six months 43·5 per cent.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 21·3 per 1,000 of the population; second, 18·6; third, 14·2; and fourth, 16·5. The rate for the first quarter is 0·1 below, the second 0·2 below, the third 0·7 below, and the fourth equal to the average rate for the corresponding quarter in the ten years 1897-1906.

Of the 77,334 deaths registered during the year, as will be observed from the table on pp. 136-145, 8,312 took place in Infirmarys and General and Special Hospitals; 1,467 in Public Lunatic Asylums; 11,096 in Workhouses and Workhouse Hospitals; and 61,459, were of persons who died "At their Own Homes, &c."

The number of deaths, in "Infirmarys and General and Special Hospitals," is equivalent to 4·8 per cent. of the total deaths registered in Ireland, the percentages for the four provinces varying from 0·5 in Connaught to 9·1 in Leinster. Of the deaths registered, 14·3 per cent occurred in Workhouses or Workhouse Hospitals, the respective percentages for the provinces being—Leinster, 16·8; Munster, 19·6; Ulster, 10·7; and Connaught, 10·4.

TABLE VIII.—Showing, by QUARTERLY PERIOD, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1897-1907, and the average number for the ten years, 1897-1906.

| YEARS. | BIRTHS. | | | | | DEATHS. | | | | |
|---|--------------------------------|--------|--------|--------|---------|--------------------------------|--------|--------|--------|---------|

CAUSES OF DEATH.

The text which follows relating to the year 1907 is compiled chiefly from the Abstracts of Diseases and Causes of Deaths which appear towards the end of this Report. These Abstracts are arranged according to the system laid down in the Official Nomenclature of Diseases (1903); this system is also adopted by the Registrar-General for England and Wales, and by the Registrar-General for Scotland.

A comparison of the numbers for each of the principal causes of death for the year 1907 with the respective averages for the same diseases or groups of diseases in the 10 years ending with 1906, and with the numbers for the year 1906, is submitted in the following tabular statement, which will allow your Excellency to observe at a glance the special features of mortality in Ireland for the year 1907.

Statement showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1906 and 1907, with the annual average number for the ten years, 1897-1906.

| CAUSES | NUMBERS OF DEATHS REGISTERED | | | CAUSES | NUMBERS OF DEATHS REGISTERED | | |
|----------------------|------------------------------|-------|----------------------------|----------------------------------|------------------------------|--------|----------------------------|
| | YEARS | | Average 10 years 1897-1906 | | YEARS | | Average 10 years 1897-1906 |
| | 1907 | 1906 | | | 1907 | 1906 | |
| Small-pox | 1 | - | 7 | Furunculæ (all forms) | 4,322 | 5,796 | 1,600 |
| Measles | 564 | 838 | 750 | All Forms of Tuberculous Disease | 11,673 | 11,236 | 12,433 |
| Scarlet Fever | 89 | 149 | 242 | Malignant Diseases | 1,338 | 1,441 | 2,029 |
| Typhoid | 55 | 63 | 185 | Diseases of Nervous System | 4,321 | 4,179 | 4,267 |
| Infantia | 1,736 | 922 | 1,194 | " Heart | 3,157 | 6,232 | 16,325 |
| Whooping cough | 329 | 349 | 368 | " Blood Vessels | 2,381 | 5,106 | 7,937 |
| Diphtheria | 402 | 354 | 722 | Bronchitis | 1,505 | 5,886 | 8,528 |
| Scarlet Fever | 1,057 | 1,372 | 1,816 | Diseases of Digestive System | 5,622 | 1,965 | 1,745 |
| Diarrhoeal Diseases | 681 | 13 | 66 | " Urinary | - | - | - |
| Cerebro-spinal Fever | 158 | 254 | 326 | " Pregnancy and Child-birth | 840 | 378 | 366 |
| Furunculæ and Boils | - | - | - | Violent Deaths | 1,377 | 1,875 | 1,690 |

It may be seen that for each of the principal Epidemic Diseases* there is a reduction in the mortality as compared with the average, but that for influenza the mortality nearly equals the high average for the preceding decennium and is considerably in excess of the mortality for 1906; that there is an increased mortality from pneumonia (all forms); that the deaths from tuberculosis, the bane of Irish mortality statistics, are practically unaltered from previous years; that there is an increase in deaths from malignant disease (as compared with the decennial average), but a decrease compared with 1906; that cerebro-spinal fever caused 631 deaths, and that there was a decrease in the number of deaths from diseases and accidents caused by the duty of maternity.

All these are successively dealt with in detail in the following pages.

I have, moreover, in this Report inserted 6 diagrams which I have considered as being most useful for the purposes of illustrating the problems arising from the study of the vital statistics of the country.

GENERAL DISEASES.

Small-Pox.—There was one death from small-pox registered in the whole of Ireland during the year 1907; the deceased was a male, aged 19 years. The death occurred in the Union of Balrothery, and Registrar's district of Holmpatrick, in the County of Dublin, where he had returned from Glasgow three days previous to his death. *He had been vaccinated in infancy, and one mark was distinguishable, but he had not been re-vaccinated.* In the same period, namely, the June quarter of the year, two cases of small-pox were returned by the Registrar of Florencecourt, in the Union of Enniskillen, who reported that the first patient stated that he caught the infection in Belvoir. In the following September and December quarters of the year each of the Registrars of Celbridge and Maynooth refer to cases of small-pox, remarking that all recovered who were stricken by the disease.

The following tabular statements which I reproduce from previous Reports give information regarding the mortality from small-pox in Ireland from the year 1882, and also give the numbers of vaccinations which were returned by the Registrars annually since that year. The second statement gives particulars regarding the vaccination of children whose births were registered in each of the years 1904-1906.

The number of deaths from small-pox registered during each of the years 1882-1907, together with the number of all successful primary vaccinations registered in each of those years, is shown in the subjoined tabular statement.

The Registrars of Births and Deaths report that 89,207 Successful Primary Vaccinations were registered by them during the year 1907.

| Year. | Number of Deaths registered from Small-pox. | Number of successful Primary Vaccinations in each year. | Year. | Number of Deaths registered from Small-pox. | Number of successful Primary Vaccinations in each year. | Year. | Number of Deaths registered from Small-pox. | Number of successful Primary Vaccinations in each year. |
|-------|---|---|-------|---|---|-------|---|---|
| 1882 | 129 | 107,413 | 1891 | 7 | 83,287 | 1900 | 1 | 91,150 |
| 1883 | 18 | 105,361 | 1892 | .. | 84,607 | 1901 | 1 | 91,095 |
| 1884 | 1 | 105,021 | 1893 | 1 | 85,698 | 1902 | 1 | 96,709 |
| 1885 | 4 | 105,480 | 1894 | 25 | 107,504 | 1903 | 40 | 105,885 |
| 1886 | 3 | 97,137 | 1895 | 108 | 90,237 | 1904 | 10 | 113,375 |
| 1887 | 14 | 96,988 | 1896 | 4 | 86,617 | 1905 | 5 | 93,284 |
| 1888 | 3 | 95,020 | 1897 | 3 | 89,725 | 1906 | .. | 90,271 |
| 1889 | .. | 91,611 | 1898 | .. | 87,188 | 1907 | 1 | 89,207 |
| 1890 | .. | 90,186 | 1899 | 1 | 84,107 | | | |

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, pyæmia (septicæmia), enteric fever and diarrhoeal diseases.

The following Table gives particulars regarding the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1906, with their percentage to the total Births registered during each year.

| Year. | Successful Vaccinations (Form A, First Schedule.) | | Vaccinations Postponed (Form B, First Schedule.) | | Symptoms of Vaccine Disease (Schedule D.) | | | | Died before Vaccination. | | Vaccinated for, owing to removal from District or otherwise. | | Defections who have not been granted an extension of time under Form B, First Schedule. | | Total Births Registered. | |
|-------|---|------|--|-----|--|------------|--|------------|--------------------------|-----|--|-----|---|-----|--------------------------|-------|
| | | | | | On the ground of constitutional unsuitability of the Vaccine Disease | | In respect of the children having already had Small-pox. | | | | | | | | | |
| | | | | | Number | Percentage | Number | Percentage | | | | | | | | |
| 1904 | 81,028 | 80.0 | 2,064 | 2.0 | 125 | 0.4 | 3 | 0.0 | 7,108 | 6.9 | 5,774 | 5.6 | 8,460 | 8.2 | 101,911 | 100.0 |
| 1905 | 81,225 | 81.6 | 2,025 | 2.0 | 50 | 0.1 | - | - | 6,024 | 5.9 | 3,425 | 3.3 | 8,598 | 8.2 | 100,222 | 100.0 |
| 1906 | 82,223 | 81.1 | 2,026 | 2.0 | 21 | 0.0 | - | - | 6,025 | 5.7 | 4,225 | 4.0 | 8,423 | 8.0 | 101,628 | 100.0 |

From this Table it appears that of the children whose births were registered in the year 1904, 81 per cent. were returned as having been successfully vaccinated; of the children whose births were registered in the year 1905, 82 per cent., and of the children whose births were registered in the year 1906, 80.4 per cent. were so returned.

In the Report for the year 1906 of the Registrar General for England and Wales, the following remark is made by Dr. Tatham:—"It is desirable, in the interest of vital statistics, that in certifying deaths from small-pox, medical practitioners should specify the patient's condition with respect to vaccination, say, by one or other of the following phrases, according to circumstances—

- (1.) No evidence of vaccination.
- (2.) Vaccinated in infancy only—number of scars.
- (3.) Vaccinated only after infection by small-pox.
- (4.) Stated to have been vaccinated, but no scars visible.

If the patient has been re-vaccinated, the date of re-vaccination should be given, where possible."

Chicken-pox.—There were 3 deaths registered from chicken-pox, all being of infants under one year of age.

Measles.—The mortality from measles, although considerably in excess of that in the preceding year, was below the average for the 10 years, 1897-1906, the figures being for 1907, 584 deaths; for 1906, 388 deaths; and the average for the decennium 750 deaths, representing rates of 0.13, 0.09, and 0.17 per 1,000 respectively. Of the total deaths, 303 were of males, and 281 were of females.

A reference to the abstracts shows that, of the total deaths from measles, 516 were of children under 5 years of age, 145 of this figure being deaths of infants under 1 year of age. The localities in which the mortality principally occurred, were as follows:—In Belfast county borough, 227 deaths; in Dublin county borough, 169 deaths; in Limerick county and county borough, 57 deaths (of which 42 were in the union of Limerick), and in Dublin county, 46 deaths (of which 37 occurred in the union of Rathdown). In other unions, deaths from measles were registered as follows:—In Armagh, 9 deaths; in Ballina, 17 deaths; in Ballinasloe, 7 deaths; in Banbridge, 8 deaths; in Cavan, 6 deaths; in Dundalk, 14 deaths; in Kilmallock, 11 deaths; in New Ross, 6 deaths; in Newry 7 deaths; and in Tipperary union, 9 deaths.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years 1897-1906; and (2) the respective

Note.—In this Table the figures for the years 1902-7
The figures for the years 1897-1901 have been

| YEAR. | Total Number of Deaths. | CAUSES OF DEATH | | | | | | | | | | | | |

Scarlet Fever.—The diminished mortality rate from scarlet fever, which becomes noticeable on a retrospective survey of Table IX., page xvi., in this Report, is a subject of interest. It may be seen from the Table mentioned that in the first year of the decennial period, commencing with the year 1897, the deaths from scarlet fever (522) for the whole of Ireland corresponded to a rate of 0·12 of the estimated population of the country, and that in the year now under notice deaths from scarlet fever numbered 99, corresponding to a rate of 0·02 per 1,000 of the population estimated to the middle of the year 1907. The average annual number of deaths for the decennial period was 242. Of the 99 deaths, 90 were registered in the province of Leinster, of which number 12 occurred in Dublin county borough; 16 deaths were registered in the province of Munster; 50 deaths were registered in Ulster, of which 12 took place in Belfast county borough, and only 3 deaths from scarlet fever were registered in the whole of the province of Connaught. Of the 99 deaths, 50 were of males, and 49 were of females. Eleven deaths from scarlet fever took place in infants under one year old; and between the ages of one year and 5 years, 48 deaths from scarlet fever were registered.

Typhus.—The history of specific fever known as typhus is, in the present epoch in Ireland, worthy of more than a passing consideration, although the mortality from typhus in the year 1907 cannot be said to form a feature of this Report.

In the year 1869, in the Report of the Registrar General for Ireland, the deaths formerly returned under the general designation "Fever" were analysed under three heads, namely, enteric fever, typhus, and simple, continued, or ill-defined fever; in that year the number of deaths which were attributed to typhus, numbered 891; in 1880 there were 934 deaths; in 1890 there were 391 deaths; in 1900 the number had fallen to 129; and in the year 1907, now under review, the number of deaths attributed to typhus was 56. Reference may here be made to a remarkable paper by Dr. Arthur Newsholme, now Chief Medical Inspector of the Local Government Board of England and Wales, entitled "Poverty and Disease," as illustrated by the course of typhus and phthisis in Ireland.

In the following table the number of deaths from typhus registered in Ireland for each year from 1869 to 1907 is given.

TABLE showing the number of Deaths from Typhus registered in Ireland during each of the years 1869-1907.

| YEAR | No. of Deaths from Typhus | YEAR | No. of Deaths from Typhus | YEAR | No. of Deaths from Typhus |
|------|---------------------------|------|---------------------------|------|---------------------------|
| 1869 | 891 | 1882 | 744 | 1895 | 193 |
| 1870 | 745 | 1883 | 810 | 1896 | 129 |
| 1871 | 873 | 1884 | 628 | 1897 | 121 |
| 1872 | 702 | 1885 | 505 | 1898 | 223 |
| 1873 | 691 | 1886 | 394 | 1899 | 117 |
| 1874 | 756 | 1887 | 405 | 1900 | 128 |
| 1875 | 694 | 1888 | 362 | 1901 | 92 |
| 1876 | 619 | 1889 | 359 | 1902 | 83 |
| 1877 | 724 | 1890 | 391 | 1903 | 77 |
| 1878 | 749 | 1891 | 286 | 1904 | 53 |
| 1879 | 753 | 1892 | 208 | 1905 | 68 |
| 1880 | 934 | 1893 | 227 | 1906 | 86 |
| 1881 | 859 | 1894 | 233 | 1907 | 56 |

Of the 56 deaths from typhus registered in the course of the year 1907, 11 were in the province of Leinster, 8 of these occurring in Dublin county borough; in the province of Munster there were 19 deaths; of this number 9 occurred in Cork union, 4 in the union of Cahersiveen, and 2 in the union of Lismore; of 8 deaths in Ulster 5 were in the union of Newry and 2 in Belfast; and in the province of Connaught there were 18 deaths from typhus; of these there were 3 in each of the unions of Killala, Oughterard and Sligo, and 2 in each of the unions of Belmullet and Galway.

Whooping-cough.—With the exception of the diarrhoeal group of diseases, the mortality arising from whooping-cough exceeded that caused by any of the so-called principal epidemic diseases.* As may be seen in Table IX. and in the abstracts, the number of deaths resulting from whooping-cough was 809; of this figure, 378 were deaths of males and 431 were deaths of females. The mortality from this disease is altogether confined to the earlier periods of life, 351 of the deaths occurring in the first year of life, 205 in the second, 113 in the third, 60 in the fourth and 38 in the fifth year. Notwithstanding the heavy tribute this disease exacted in the year under review, the rate was lower than that in the preceding year and considerably below the average rate for the 10 years 1897-1906; these rates being respectively 0.19, 0.21, and 0.26 per 1,000 of the estimated population.

With the exception of 4 counties in the province of Leinster, namely—Carlow, King's, Louth and Westmeath, and one county in the province of Munster, namely, Tipperary, North Riding, no county in Ireland is free from mortality from whooping-cough. It is moreover to be seen that in Dublin county borough 179 deaths were registered; in Cork union, which contains the city of Cork, 74 deaths were registered; in Belfast county borough 70 deaths were registered; and in the following unions deaths from whooping-cough numbered respectively—in Antrim 12 deaths; in Carrickmacross 17 deaths; in Castlereagh 16 deaths; in Ennistimon 11 deaths; in Kilkenny 10 deaths; in Kilrush 14 deaths; in Limerick 13 deaths; in Lishurn 10 deaths; in Lisnakea 10 deaths; in Listowel 34 deaths; in Lurgan 12 deaths; in Rathdown 16 deaths; and in Rathdrum 11 deaths.

Diphtheria.—In comparison with the mortality in the year 1906, and also with the average mortality from diphtheria in the preceding decennial period, the mortality from this disease shows a decline in the year 1907, the rates being for 1906, 0.08, for the ten years 1897-1906 the average rate was also 0.08, and for the period under review the rate was 0.07 per 1,000 of the population of Ireland estimated to the middle of the year, the latter rate representing 283 deaths returned in the year 1907 as from diphtheria or from membranous croup. Of the total deaths, 140 were of males and 143 were of females. There were 157 deaths from diphtheria of children under 5 years of age, and 84 deaths between the ages of 5 years and of 10 years.

Of the 283 deaths, 44 were in Dublin county borough, 34 were in Belfast county borough and there were 11 in each of the unions of Cork and Lishurn.

The following remarks are copied from a circular of suggestions to medical practitioners, which I have just issued:—

"The term croup should not be used. When *membranous laryngitis* is returned as the cause of death, it should be qualified by the use of the term *non-diphtheritic*. The employment of the designation, *membranous croup*, as a synonym for laryngeal diphtheria, should be abandoned."

Enteric Fever.—The mortality from enteric fever, which had declined from 0.28 per 1,000 of the population in the year 1898 to 0.09 in the year 1906, further declined to 0.08 per 1,000 of the estimated population in the year under notice. The number of deaths represented by the above-mentioned rates were respectively, 1,284 in 1898; 894 in 1906, and 362 deaths from enteric fever in the year 1907. It may be seen in the abstracts of causes of death that in Dublin county borough there were 34 deaths, in Belfast county borough there were 64 deaths, in Cork and Cork county borough there were 26 deaths, 16 of this number being in Cork union, which contains the county borough of Cork. In the union of Lishurn 21 deaths were recorded, and 13 in the union of Manorhamilton. The majority of the decedents from enteric fever were males, namely, 205, the deaths of females being 157 in number. In Table XI. the number of deaths from enteric fever is given by sexes and age-periods. In the age-period from 25 to 35 years there were 62 deaths of males and 31 of females, and of the total deaths only 34, i.e., 13 males and 21 females, were under the age of 10 years.

The number of deaths returned as from pyrexia (origin uncertain) was 26. This condition was formerly described as *simple, continued, or ill-defined fever*.

* See note (*) on page xiv.

TABLE XI.—Showing for the year 1907 the Deaths from the several forms of *Fever* at each Age-Period with the proportion to the number of the living at each Age represented thereby.

* Formerly described as "Simple, Continued, or Ill-defined Fever".

Diarrhoeal Diseases.—The year 1907 records a sharp decline in deaths from diarrhoeal diseases, namely from 1,675 deaths in 1906 to 1,067 deaths in 1907; the average for the ten preceding years being 1,616 deaths; these figures are represented by the following rates, 0·38, 0·24 and 0·26, per 1,000 of the respective populations. These figures do not include deaths from enteritis and gastro-enteritis, which are classified under diseases of the digestive system; 291 deaths from the former and 289 from the latter cause appear to have been registered in the course of the year 1907. The position of the column in Diagram 2, facing page xiii., which represents the mortality from this group of diseases is transferred from the position of ninth in 1906 to that of eleventh among the 23 principal causes of death in Ireland in the year 1907. Of the 1,067 deaths, 752 occurred under the age of 5 years; of the latter figure 580 were deaths of infants under one year.

It may here be observed that the mean temperature for the year 1906 was 49·3° and the mean rainfall was 36·09 inches; in the year 1907 the mean temperature was 48·7° and the mean rainfall was 39·56 inches.

In the following table, which I have reproduced from my Quarterly Report on Marriages, Births and Deaths in Ireland for the September quarter of the year 1907, the number of deaths from diarrhoeal diseases registered during the quarter, the mean temperature of the air, the mean of the earth temperature at 4 feet, the average number of hours of bright sunshine observed, and the average rainfall in the September quarters of the years 1904-1907 are given.

| — | September Quarter of Year | No. of Deaths from Diarrhoeal Diseases | Mean Air Temperature | Mean Earth Temperature at 4 feet | Bright Sunshine No. of hours observed | Rainfall in inches |
|----------|---------------------------|--|----------------------|----------------------------------|---------------------------------------|--------------------|
| Ireland, | 1904 | 607 | 57·2° | 56·8° | 464 | 11·71 |
| | 1905 | 730 | 57·3° | 57·3° | 392 | 9·39 |
| | 1906 | 835 | 58·4° | 57·4° | 486 | 7·25 |
| | 1907 | 325 | 57·5° | 56·4° | 414 | 7·85 |

With respect to locality and mortality from diarrhoeal diseases, it is to be observed that 175 deaths were registered in Dublin county borough and 200 in Belfast county borough, in other words, more than one-third of the total deaths from diarrhoeal diseases were in Dublin and Belfast. In the unions of Cork, Londonderry and Waterford, which contain the respective county boroughs of the same name, 62, 26, and 46 deaths from diarrhoeal diseases were severally recorded.

TABLE XII.—Showing, by Provinces, Counties, &c., the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1907, with the rate per 10,000 of the population* represented by the deaths at all ages.

| PROVINCE, COUNTY, &c. | | Population in 1901. | No. of Deaths from Influenza. | | | | | Total. | Rate per 10,000 of Popula- tion.* |

* See note (*) on page vii.

Influenza.—The fatalities attributed directly to influenza were 1,720 in number, showing an increase of 742 deaths on the number recorded in the preceding year, but 58 below the average for the 10 years, 1897-1906. It may here be observed that mortality from bronchitis and from pneumonia (all forms) exhibits an increase when compared with the figures for the year 1906.

In Table XII., page xxii., is given the number of deaths from influenza, by provinces, counties, etc., at each of five age-periods, also the rate per 10,000 of the population represented by deaths at all ages.

From this table it appears that of the 1,720 deaths, 774 were of males and 946 were of females; also that the disease does not spare life at any age period. With regard to the distribution of the mortality (which for the whole of Ireland was represented by a rate of 0.39 per 1,000 of the estimated population), in the province of Leinster the rate was 0.39; in Munster 0.26; in Ulster 0.47, and in Connaught 0.37 per 1,000 of the population of the province, according to the Census of 1901. The mortality rate varied from 0.12 per 1,000 in Clare county to 0.81 per 1,000 in Tyrone county. Between these the three county or county borough areas having the lowest death rate from influenza are Belfast county borough 0.16 per 1,000, Tipperary, North Riding 0.19 and Kerry county 0.21; and the three counties having the highest death rate from this cause are Kilkenny county 0.77 per 1,000, Fermanagh county 0.75, and Leitrim county 0.74.

The widespread prevalence of the disease during the year is evident from the mortality which has been reported from the superintendent registrars' districts or poor law unions of Ireland. The unions, alphabetically arranged, in which 20 deaths or upwards occurred were as follows:—in Armagh 29 deaths; in Baurbridge 24 deaths; in Belfast 64 deaths; in Cork 24 deaths; in Downpatrick 33 deaths; in Dublin North 56 deaths; in Dublin South 50 deaths; in Dungannon 46 deaths; in Enniskillen 28 deaths; in Inishowen 20 deaths; in Kanturk 28 deaths; in Letterkenny 20 deaths; in Lisburn 23 deaths; in Lurgan 35 deaths; in Magherafelt 28 deaths; in Mohill 35 deaths; in Monaghan 21 deaths; in Omagh 28 deaths; in Rathdown 20 deaths; in Stranorlar 22 deaths; in Thomastown 26 deaths; in Tullamore 22 deaths; and in Waterford 28 deaths.

Cerebro-spinal Fever.—An unusual but not unprecedented feature in the mortality statistics of Ireland was an epidemic of cerebro-spinal fever, which was manifest in Belfast at the close of the year 1906, and to which I made reference in my detailed Annual Report for that year.

The first outbreak of cerebro-spinal fever which was recognised in Ireland occurred in 1846, principally in Dublin, and lasted until 1850. Again, in the year 1865, the disease appeared, and assumed grave proportions in the two succeeding years 1866 and 1867; it was then known as "Black Death," or "Malignant Purpuric Fever"; in the year 1878 a few deaths were reported in Dublin, and in 1900 another epidemic of the disease again prevailed in Dublin.

From tables which have been published in the Quarterly Summaries of the Weekly Reports during the year (52 weeks) ended 28th December, 1907, the incidence of the epidemic in Belfast may be studied.

In the calendar year 1907, out of a total of 631 deaths for the whole of Ireland (of males 358, and of females 273), there were 495 of the total deaths appertaining to Belfast county borough. Of the deaths for Belfast, 154 were registered in March quarter, 242 in June quarter, 70 in September quarter, and 29 in the December quarter of the year. In each of the weeks ending the 20th and 27th of April the greatest number of deaths of residents of Belfast for any one week was registered, namely, 27 deaths in each week.

During the 52 weeks ended 28th December, 1907, 623 cases of cerebro-spinal fever were notified to the Public Health Committee of the Belfast Corporation, namely:—293 in March quarter; 291 in June quarter; 54 in September quarter; and 45 in December quarter.

In diagram 2, facing page xiii, it may be seen that the column representing the mortality from cerebro-spinal fever occupies the sixteenth place among the 22 principal causes of death for the year 1907.

In the following table the duration of illness of the persons whose deaths were registered is given by sexes.

STATEMENT showing, by sexes, the duration of illness of the persons whose deaths were registered from cerebro-spinal fever in Ireland during the year 1907.

| SEXES | DURATION OF ILLNESS | | | | | | | | | | | | | | | | | | | | | | | | | | | Totals |
|---------|---------------------|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----------------------|-------|-------|-------------|----------------------|-----|--|--------|
| | Days | | | | | | | | | | | | | | | | | | | | Months | | | Unspecified | | | | |
| | Under 74 Hours | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 days to one month | 1 | 2 | | 3 months and upwards | | | |
| MALES | 40 | 45 | 27 | 31 | 31 | 28 | 24 | 7 | 30 | 8 | 6 | 8 | 8 | 4 | 8 | 3 | 9 | 3 | 9 | 3 | 14(4) | 10(4) | 16(0) | 8(0) | 7 | 328 | | |
| FEMALES | 45 | 46 | 32 | 25 | 15 | 11 | 11 | 15 | 3 | 6 | 1 | 1 | 3 | 1 | 9 | 3 | 3 | 1 | 1 | 4 | 15(0) | 11(7) | 21(0) | 8(0) | 6 | 313 | | |
| TOTAL | 85 | 91 | 59 | 56 | 46 | 39 | 35 | 22 | 33 | 15 | 7 | 9 | 11 | 5 | 17 | 6 | 12 | 4 | 10 | 7 | 29 | 21 | 37 | 16 | 13 | 641 | | |

(c) including one 30 days, one 31 days, two 32 days, two 34 days, three 37 days, one 38 days, and one 39 days.

[illegible]

(c) Including three 3 months, one 60 days, one 90 days, two 70 days, one 2½ months, one 70 days, one 74 days, one 77 days, one 78 days, one 81 days, two 82 days, and one 87 days.

(4a) Twelve-hour term: 3 months, one 6 months, one 17 months, one 4 months, one 5 months, one 6 months, and one 8 months.

(c) Including one 20 days, three 21 days, one 22 days, one 23 days, two 24 days, one 25 days, one 4 weeks, and two 26 days.

(f) Including two 1 month, one 30 days, one 32 days, one 34 days, one 1 month 7 days, one 30 days, one 1 month 8 days, one 41 days, one 42 days, one 44 days, one 47 days, and one 48 days.

(g) Including one 60 days, two 3 months, one 64 days, one 2 months 7 days, one 70 days, one 2 months 13 days, one 75 days, one 78 days, one 80 days and one 82 days.

(b) Including one 3 months, one 92 days, one 4 months 6 days, one 43 months and one 36 months.

It is apparent that in the large majority of the deaths from cerebro-spinal fever the fatal issue was exceedingly rapid.

The following statement shows the Unions in which the deaths from Cerebro-spinal fever of 631 persons (338 males and 293 females) were registered during the year 1907:—

| Union | M. | F. | TOTAL | Union | M. | F. | TOTAL |

Although this table does not appear to throw light on the origin of this mysterious disease, I have decided to publish it, in the hope that it may be of some use to those who are investigating the origin and spread of the disease.

I may here again venture to remind the members of the medical profession that the use of ill-defined causes of death in medical certificates entails a great amount of unnecessary work, both in this Office, and also for those who use such ill-defined terms; in this connection I may state that the term *cerebro-spinal meningitis*, without qualification as to its probable cause, comes under this category. The following table, which has been prepared for the 4 years 1904-1907, shows the result of querying in 327 instances in which the term *cerebro-spinal meningitis* was returned as a cause of death without further qualification.

TABLE showing Result of Inquiry in 327 instances in which the term *cerebro-spinal meningitis* was registered as a cause of death during the years 1904-1907.

| Years | No. of Queries sent | WHEN TABULATED FINALLY | | | | | | | |
|-------|---------------------|------------------------|------------------------|------------|--------------------------|---------|-----------------------|-----------|--------------|
| | | Cerebro-Spinal Fever | Tuberculous Meningitis | Meningitis | Tubercle of other Organs | Infusum | Othio, Marial Disease | Furunculæ | Other Causes |
| 1904 | 33 | 4 | 5 | 1 | 8 | 2 | 1 | 1 | 11 |
| 1905 | 44 | 16 | 13 | 8 | - | - | - | - | - |
| 1906 | 20 | 5 | 12 | 6 | - | - | - | - | 1 |
| 1907 | 230 | 204 | 1 | 10 | - | 2 | - | - | 1 |
| Total | 327 | 229 | 31 | 25 | 9 | 4 | 1 | 1 | 13 |

* It appears from above statement that out of 327 certificates of death from *cerebro-spinal meningitis*, the writers in 234 instances used the term as being synonymous with *cerebro-spinal fever*, and in 93 cases it was used with a different meaning.

In the abstracts, the deaths from *cerebro-spinal fever* are given by ages and sexes; there it will be seen that of 358 deaths of males, 155 were under 5 years of age and 80 were between the ages of 5 years and 10 years; and of 273 deaths of females, that 125 were under 5 years of age, and 58 were deaths between the ages of 5 years and 10 years. It will be seen that the mortality from the disease appears to diminish in the period of early manhood and middle age, and that no mortality occurred in males over 55 years or among females over 65 years of age.

As already mentioned out of a total of 681 deaths from *cerebro-spinal fever*, 495 appertained to Belfast County Borough; in Dublin North and South Unions, 43 deaths were registered from this disease, and in the following unions, arranged in alphabetical order, one or more deaths were registered, namely:—in Antrim, Armagh, Athlone, Athy, Ballieborough, Ballina, Ballycastle, Ballymena, Banbridge, Carlow, Castleblayney, Cavan, Clones, Cootehill, Cork, Dingle, Downpatrick, Dunfanaghy, Inishowen, Larne, Lisburn, Lurgan, Newry, Newtownards, Omagh, Rathdown, Rathfriland, Roscommon, and Waterford. (For the number of deaths registered in each Union see Table on page xxiv.)

Rabies (Hydrophobia).—The records of mortality did not contain the entry of one death from rabies. The last death from rabies which was registered in Ireland was in the year 1898, in the course of which year 4 fatalities from the disease were reported.

Puerperal Septic Diseases.—Under the head of puerperal septic diseases, the deaths of 163 women (all between the ages of 15 years and 55 years) were returned. Of the 163 deaths, 105 were returned as from puerperal septicaemia; 6 as from puerperal pyæmia; 11 from phlegmæsia dolens and 41 were tabulated to *puerperal fever*, a term the use of which should be discontinued. The deaths in this group, for the year 1907, compare favourably with the mortality in the previous year (234) and with the average (324) for the preceding 10 years. Further reference will be made to this subject in the paragraph dealing with the mortality from accidents of childbirth. The number of deaths from puerperal septic diseases, at each of five age-periods, is included in the following table :—

TABLE XIII.—Deaths of Women in Ireland in 1907 definitely returned as either caused by or associated with Pregnancy or Childbearing.*

| Cause of Death. | All Ages | Age. | | | | |

* These deaths are included in the general tables of Cause of Death.

Septicaemia, &c.—There were 65 deaths from septicaemia, 39 of males and 26 of females (not puerperal); there were 25 deaths from pyæmia, 19 of males and 6 of females (not puerperal); phlegmon, carbuncle (not anthrax) was the cause of 54 deaths.

Pneumonia.—Under the general head of pneumonia, the deaths from lobar pneumonia, broncho-pneumonia, epidemic pneumonia, and pneumonia (not defined) are returned; these deaths in the aggregate numbered 4,102, and are represented in diagram 2 by the fifth column among the principal causes of death in Ireland for the year 1907. The total forms more than 5 per cent. of deaths from all causes registered in Ireland during the year, and represents a death rate of 0.94 per 1,000 of the estimated population of the country, as against a rate of 0.87 per 1,000 in the year 1906 and an average rate of 0.81 for the 10 years 1897-1906. It may be noted that the highest number of deaths from pneumonia which occurred in any year of the preceding decennial period was in the year 1900, in that year also the mortality from influenza was at its maximum for the decennial period 1897-1906. The total deaths in 1907 include the deaths of 168 males and 94 females from lobar pneumonia; 668 males and 600 females from broncho-pneumonia; and 1,534 males and 1,043 females from pneumonia (not defined).

No less than 655 deaths from pneumonia (all forms) were registered in Dublin county borough, and 658 were registered in Belfast county borough; in Cork union 148 deaths were registered, in Limerick union 73, in Londonderry union 88, and in Waterford union 26 deaths. The total number of deaths from pneumonia registered in the unions containing the six county boroughs was 1.56 per 1,000 of their aggregate population. In the remaining parts of Ireland such deaths were represented by a rate of 0.73 per 1,000 of the population.

With regard to the incidence of pneumonia on age conditions, it may be seen in the abstracts that of the total deaths (252) from lobar pneumonia, only 27 were of children under 5 years of age, and that of 1,263 deaths from broncho-pneumonia 678 deaths were of children under 5 years; 314 of the latter deaths being of infants under 1 year of age; in this connection it is to be remembered that broncho-pneumonia is a frequent complication of influenza and of measles, both of which diseases, especially the latter are particularly destructive to infant life in the overcrowded and poorer portions of the urban districts.

TUBERCULOSIS.

I have had the honour on two previous occasions, namely in my annual detailed reports for each of the years 1905 and 1906, of bringing the subject of tuberculosis mortality in Ireland specially under Your Excellency's notice, and much regret that it is now my painful duty again to report an excessive mortality in Ireland from tuberculous disease during the year 1907. The deaths from all forms of tuberculous disease for that year were in number 11,679, as compared with 11,756 deaths registered in the year 1906. The total deaths are represented by a rate of 2.7 per 1,000 of the population of Ireland estimated to the middle of the year 1907. These deaths are over 15 per cent. of deaths from all causes registered during the year. I present in this report 4 diagrams which in part or in whole represent the position of tuberculous disease as a cause of mortality. In diagram No 2, facing page xiii, the mortality from 23 principal causes of death in Ireland is shown, by comparison. From this diagram it appears that the column representing mortality from tuberculous disease stands first in the list. In diagram No. 3, facing this page, the rates for England and Wales and for Scotland are compared with that for Ireland for a series of years—namely, from 1864 to the latest available records. The diagram shows that the recorded rate for all forms of tuberculous disease in England and Wales fell from 3.3 per 1,000 in 1864 to 1.6 per 1,000 in 1906, and that in Scotland it fell from 3.6 per 1,000 in 1864 to 2.1 per 1,000 in 1906, while the rate from tuberculous disease in Ireland which had been 2.4 per 1,000 in 1864 rose to 2.7 per 1,000 in each of the years, 1906 and 1907. In diagram No. 4, facing page xxxiii, I have compared the death rates at certain age-periods from all forms of tuberculous disease in Ireland with those of England and Wales and of Scotland for the year 1905. A comparison with a similar diagram for the year 1903 (published in my detailed annual report for the year 1905), shows that no essential change has taken place in the relative positions of the death rates at similar age-periods for Ireland and for the sister countries in each of the years for which these diagrams were framed. In 1905, as in 1903, the preponderance of the rates for Ireland at the effective age-periods over England and Wales and Scotland is manifest. In Ireland, in 1905, the rate from all forms of tuberculous disease at the age-period 15 and under 20 years was 3.0 per 1,000; at 20 and under 25 it was 3.8;

at 25 and under 35 it was 4·6, and at 35 and under 45 it was 3·6. The corresponding rates for England and Wales were 1·1 per 1,000, 1·5 per 1,000, 1·9 per 1,000, and 2·2 per 1,000; the rates for Scotland at these age periods being 1·8 per 1,000, 2·3 per 1,000, 2·5 per 1,000, and 2·4 per 1,000 respectively. Diagram 5, facing page xxxiv., shows for each of four general classes in the Dublin Registration Area the mortality per 1,000 of the population in 1901, represented by deaths from tuberculous phthisis registered in each of the years 1901-1907. It may be seen from this diagram that among the Professional and Independent Class the death rate from tuberculous phthisis has declined from 1·0 per 1,000 in 1901 to 0·8 per 1,000 in 1907; that in the Middle Class, the rate which in 1901 was 2·1 per 1,000 had declined to 1·6 per 1,000 in 1904, but rose again to 2·1 per 1,000 in 1907; that among the Artisans and Petty Shopkeepers, the rate in 1901, which was 2·8 per 1,000, reached 2·8 per 1,000 in each of the years 1902 and 1903; the rate declined to 2·8 in the year 1905, rose to 2·4 per 1,000 in 1906 and again declined to 2·3 in 1907; in the 4th or General Service Class, the excessive rate of 3·2 per 1,000 occurred in 1901, but declined steadily with exacerbations in 1904 and 1905 to 2·4 per 1,000 in the year 1907.

In my last report I referred to the inauguration of the Women's National Health Association of Ireland, by Her Excellency the Countess of Aberdeen, and I ventured to express the hope that this Association would bring forward prominently the importance of the prevention of consumption and other forms of tuberculosis in this country. Since the date of that report Her Excellency's Irish Tuberculosis Exhibition, opened by Your Excellency in Dublin, in the month of October, 1907, has done signal service, by means of the Exhibits, Lectures and Demonstrations, in enlightening the people regarding the nature of the disease, and the preventive measures which should be adopted to limit its ravages. The provincial Exhibitions organized and administered by Her Excellency have aroused the greatest interest in the Cities and Towns which have been visited, and the Lectures delivered in connection with these Exhibitions have been everywhere attended by crowded and interested audiences. Indications are abundant that the people are being thoroughly aroused to the dangers which beset them from this source.

The fact that the mortality in the year 1907 was practically the same as that for the year 1906 need not discourage those who are so deeply interested in the anti-tuberculosis movement, as there has not been time as yet for the energetic measures taken by Her Excellency in combating the disease to show their effect on the mortality statistics published by this Department.

Tuberculous Phthisis (Phthisis).—Passing on to the enumeration of the various forms of tuberculous disease, it appears that the number of deaths attributed to tuberculous phthisis or *phthisis* was 8,828; this number represents a death rate of 2·02 per 1,000 of the estimated population of Ireland; of the deaths 4,371 were of males, representing a death rate of 2·01 per 1,000 males living, and 4,457 were deaths of females, representing a rate of 2·02 per 1,000 females living. In the following table the total number of deaths from tuberculous phthisis (*phthisis*) during the year 1907 are giving by age-periods and by sexes.

| AGE PERIODS | Deaths from Phthisis in Ireland. | | | | | |
|----------------|----------------------------------|----------------|----------|----------------|------------|----------------|
| | Total of both Sexes | | Of Males | | Of Females | |
| | Number | Rate per 1,000 | Number | Rate per 1,000 | Number | Rate per 1,000 |
| 0-5 years | 173 | 0·40 | 86 | 0·89 | 87 | 0·41 |
| 5-10 " | 148 | 0·32 | 53 | 0·54 | 95 | 0·41 |
| 10-15 " | 356 | 0·79 | 164 | 0·65 | 254 | 1·15 |
| 15-20 " | 1,067 | 2·35 | 442 | 1·91 | 635 | 2·82 |
| 20-25 " | 1,425 | 3·28 | 708 | 3·00 | 715 | 3·24 |
| 25-30 " | 2,553 | 5·97 | 1,380 | 4·25 | 1,323 | 3·60 |
| 30-35 " | 1,492 | 3·15 | 775 | 3·56 | 717 | 1·91 |
| 35-40 " | 885 | 3·13 | 457 | 1·77 | 406 | 1·49 |
| 40-45 " | 507 | 1·47 | 235 | 1·14 | 73 | 0·78 |
| 45-50 " | 121 | 0·39 | 106 | 0·29 | 20 | 0·43 |
| 50 and upwards | 60 | 0·04 | 13 | | | |
| Total all ages | 8,828 | 2·02 | 4,671 | 2·01 | 4,457 | 2·02 |

It appears that the highest rates both for males and for females take place in the age-period between 25 and 35 years; that for males being 4.20 and that for females 3.74 per 1,000 of the respective male and female populations. It may also be noticed that, with the exception of the first four age-groups and the last age-period, the death rate for males is in excess of that for females.

Table XIV, on this page, gives for 37 years the number of deaths from different forms of tuberculous disease, in four divisions, also the rate per 1,000 from all forms of the disease, the total deaths from all causes and the death rate, also the percentages of the total deaths from tuberculous disease to the total deaths from all causes. Averages for three decennial periods, one period of 6 years, and for the total period of 36 years are also given.

Tuberculous Meningitis, Acute Hydrocephalus.—In the course of the year, 843 deaths were ascribed to tuberculous meningitis, and 23 to acute hydrocephalus; of the former figure, 436 were deaths of males, and 407 were deaths of females; and of 23 deaths from acute hydrocephalus, 15 were deaths of males. The total deaths, 866, represent a rate of 0.220 per 1,000 of the population, the deaths of males representing a rate of 0.21 per 1,000 males living, and the deaths of females a rate of 0.19 per 1,000 females living in the population at the middle of the year 1907. Of the total deaths from tuberculous meningitis, more than 55 per cent. were of children under the age of 5 years, and about 35 per cent. were of persons between the ages of 5 years and 20 years.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Tuberculous Phthisis (*Phthisis*), Tuberculous Meningitis, Tuberculous Peritonitis and *Tuberculous Mesenteric*, Other Forms of Tuberculous Disease and *Scrophula* and from all causes, registered in Ireland in each of the thirty-seven years 1871–1907, with the Rate per 1,000 of Estimated Population represented by (a) Deaths from the above-mentioned forms of Tuberculosis, (b) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

| Years. | Number of Deaths from | | | | Total Deaths from all the foregoing causes. | | Total Deaths from all causes. | | Percentage of Deaths caused by the Diseases referred to in Columns 5, 6, and 7. |
|---------------------------------|--|------------------------|--|---|---|---|-------------------------------|-----------------|---|
| | Tuberculous Phthisis (<i>Phthisis</i>) | Tuberculous Meningitis | Tuberculous Peritonitis and Tuberculous Mesenteric | Other Forms of Tuberculous Disease and <i>Scrophula</i> | Number. | Rate per 1,000 of Estimated Population. | Number. | Rate per 1,000. | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) |
| 1871 | 12,497 | 1,093 | 1,079 | 471 | 15,149 | 0.6 | 86,248 | 2.04 | 399 |

Tuberculous Peritonitis.—The mortality due to tuberculous peritonitis was 259 deaths (117 of males and 142 of females); to *tuberculosis mesenterica*, 182 deaths (88 of males and 94 of females) were attributed. In the total, deaths from tuberculous peritonitis and *tuberculosis mesenterica* numbered 441, and were equal to a rate of 0·10 per 1,000, the rate for males being 0·09 per 1,000, and that for females 0·11 per 1,000.

Seventy-eight of the deaths from tuberculous peritonitis and 126 of the deaths from *tuberculosis mesenterica* were those of children under 5 years of age.

Other Tuberculous Diseases.—Among the deaths from other forms of the disease there were 14 deaths from lupus, 610 deaths from tubercle of other organs or parts of the body, 878 returned as from general tuberculosis or from tuberculosis (not otherwise defined), and 42 deaths which were attributed to *scrophula*. The aggregate total of the above-mentioned is 1,544 deaths, and is represented by a rate of 0·35 per 1,000 of the estimated population.

Further information with respect to ages, sexes, and the distribution of the disease in the provinces, counties and unions of Ireland is contained in the various Abstracts dealing with diseases and causes of death, commencing at page 112 of this Report.

Alcoholism.—The deaths of 221 persons were directly attributed to the effects of alcohol. Of these persons, 180 were males and 41 were females. The deaths in this category do not include deaths returned as from acute alcoholic poisoning, which are included amongst violent deaths and classified as being due to poison. See Table XVI.

That the influence of intemperance on the death rate is not fairly represented by the above figures is recognised, nevertheless, a retrospect of the Irish figures for alcoholic mortality, as returned, shows that an increase has occurred. In the year 1891 there were 131 deaths recorded, in 1900 the number had increased to 181, and in the period under review the figure again rose to 221. It has, however, to be remembered that since the year 1902—in the Irish records—deaths from accidental violence, stated to be associated with alcoholism, have been referred to the latter cause. The term “alcoholic poisoning” as frequently used in certificates, leads to queries being issued asking for further information, as to whether the alcoholic poisoning was acute; the amount and state of purity of the alcohol taken; and the time which elapsed before death took place.

Rheumatic Fever, etc.—Of 159 deaths from rheumatic fever, acute rheumatism, 84 were deaths of males and 75 were of females; there were, moreover, 54 deaths assigned to rheumatism of heart, 20 of males and 34 of females. Chronic rheumatism accounted for 473 deaths, of males, 200, and of females, 273; and to rheumatic arthritis or rheumatic gout the deaths of 120 persons were assigned; of the latter figure, 47 were deaths of males, and 73 were of females. The total number of deaths from this group of diseases was 806; in the year preceding, 681 deaths were assigned to one or other of these causes.

Gout.—Of 13 deaths from gout, 9 were of males and 4 were of females, as against 12 deaths registered in the year 1906, of which number 8 were of males and 4 were of females.

MALIGNANT DISEASE.

Turning to Table XIII. of the Decennial Report, 1891-1900, pages 24 and 25, it may be seen that the rate for cancer mortality increased from 46·2 per 100,000 of the population in 1891 to 60·8 per 100,000 in 1900. In the year 1901 it further increased to 65·1, but declined in the year 1902 to 64·5, rising to 69·1 in 1903, to 69·4 in 1904, to 74·9 in 1905, and to 79·3 in 1906, but declining in the year under review to 76·2 per 100,000 of the population.

The deaths classified under the heading of malignant disease include those returned as from carcinoma, sarcoma, and from malignant disease, cancer (undefined); in addition, when a tumour is stated as being the cause of death or connected with death, its nature not being stated, a letter asking for information regarding the

structure of the tumour is issued to the medical practitioner who certified, and on receiving the reply, if authorised, the death from tumour is removed from the ill-defined cause to malignant disease. It is of interest to report that by means of letters of enquiry regarding tumours and other ill-defined conditions, no less than 75 deaths in the year 1907 have been removed from causes of a more or less doubtful nature and allocated to one or other of the divisions of malignant disease.

Of the total deaths, 3,338, from malignant disease (all forms), 1,530 were of males and 1,808 were of females. This total includes 1,039 deaths from carcinoma—of males 456 and of females 583; 146 deaths from sarcoma—89 of males and 57 of females; and 2,153 deaths assigned to cancer, malignant disease; of these 985 were deaths of males and 1,168 were deaths of females. For the purpose of comparing the death rates from malignant disease as it affects the sexes, it has been the custom to exclude the deaths of persons under the age of 35 years in making the necessary calculations, and to calculate the death rates of males and of females on the respective populations living in the middle of the year who were aged 35 years and upwards. Obtained by these calculations, the death rate for males was 2.02 per 1,000, and the death rate for females was 2.22 per 1,000 of the respective male and female populations at 35 years and upwards. In the year 1906 the death rate for males was 2.07 per 1,000 of the estimated male population, and that for females was 2.36 per 1,000 of the estimated number of females living in the population, aged 35 years and upwards.

In the abstracts commencing on page 112 the deaths from malignant disease in Ireland are given by sexes and age periods; while the number of deaths registered during the year in each province, county and union in Ireland is set forth on page 136 and following pages.

The following table shows for males and females the parts affected by the tumours, which caused the deaths of 52 persons (not including those deaths from tumours of the brain, uterus or ovary) and which were either stated to be non-malignant in character, or the pathological structure of the tumours could not be ascertained.

Statement showing the parts affected by the Tumours which caused the deaths of 15 males and 37 females.

* Including Cancer, Scrofula and Cancer, Malignant Diseases.

DISEASES OF SPECIAL ORGANS.

The mortality included in this group is about 42 per cent. of the mortality from all causes registered during the year 1907.

Meningitis.—The deaths which were assigned to meningitis, or inflammation of the brain or of its membranes, were in number 699, of which 369 were deaths of males and 330 were deaths of females. Of the total deaths from meningitis, 357 were under 5 years of age, and of this latter figure 143 fatalities occurred among infants under one year of age.

Softening of the Brain.—To this condition 191 deaths were attributed in the course of the year, 102 being deaths of males and 89 of females; all these deaths occurred in persons above the age of 25 years, more than 41 per cent. of the deaths from softening of the brain occurring among persons between the ages of 65 and 75 years.

General Paralysis of the Insane.—Of 88 deaths from general paralysis of the insane, 69 were of males and 19 were of females; the total exceeded the number recorded in the year 1906 by 21. All of these deaths were of people aged 25 years and upwards; in the age-period between 35 and 45 years the largest number of deaths occurred, namely 32, 28 being those of males and 4 of females.

Epilepsy.—During the years 1891-1900, the average number of deaths from epilepsy was 305, of males 163 and of females 142. In the period under notice, the number of deaths from this cause was 308, of males 181 and of females 127. The mortality from epilepsy would therefore appear to have slightly increased in the year 1907, when compared with the average rate for the 10 years, 1891 to 1900. Under the age of 10 years, deaths from epilepsy are not numerous.

Convulsions.—That 1,427 deaths should be classified to a condition which is symptomatic is a matter of regret. In the Official Nomenclature of Diseases (1906) in a foot note on page 31 the following occurs:—"This term—(*convulsions*)—being the name of a symptom should only be used when more precise information is wanting. When the cause is known the return should be made under the head of that cause." Of the 1,427 deaths attributed to *convulsions*, 1,151 were of infants under 1 year of age, this number being 12·8 per cent. of the total deaths of infants under one year old.

Locomotor Ataxy.—The number of persons who were returned as having died from locomotor ataxy was 52, as against 46 in the preceding year, and an average of 41 in the 5 years 1902-1906. Of the deaths in 1907, 41 were of males and 11 were of females. The earliest age-period in which mortality from this disease occurred was that between the ages of 25 and 35 years.

Neuritis, Peripheral, Poly-neuritis.—There were 34 deaths (16 of males and 18 of females) recorded from one or other of these conditions.

Tumour of Brain.—In the examination of the certified copies, when death is returned as being caused by "tumour of brain," a circular asking for more definite information is issued to the certifying practitioner regarding the nature of the tumour—e.g., whether caused by syphilis, tubercle or sarcoma; the replies to circulars enabled 14 such deaths to be classified according to the disease which produced the tumour, including 7 to malignant disease; in 35 instances, however, no further information was available, generally on the grounds of the difficulty of diagnosis, and the failure of obtaining a post-mortem examination. Of the 35 deaths, 22 were of males and 13 were of females.

Diseases of the Heart.—In the aggregate, diseases of the heart caused the deaths of 9,157 persons, a number which is represented by a rate of 2·09 per 1,000 of the population. The total deaths include 2,313 (of males 1,068 and of females 1,225) from valve disease, endocarditis; 34 (of males 23 and of females 11) from pericarditis; 23 (of males 14 and of females 9) from hypertrophy of heart; 62 (of males 41 and of females 21) from angina pectoris; 228 (of males 114 and of females 109) from dilatation of heart; 281 (of males 106 and of females 125) from fatty degeneration of heart. Of the remaining 6,271 deaths assigned to *syncope* or *heart disease* (not specified) 3,024 were of males and 3,247 were of females.

Diseases of the Blood Vessels.—It may be seen in Table IX., page xvii., that during the year 1907, the deaths from diseases of blood vessels represented a rate of 0·74 per 1,000 of the estimated population, and numbered 3,251. On referring to the abstracts it will appear that there were 1,283 deaths (of males 555 and of females 728) attributed to cerebral hæmorrhage; 1,550 (of males 678 and of females 886) to apoplexy, hæmiplegia; 59 (of males 50 and of females 9) to aneurysm; 197 (of males 97 and of females 100) to senile gangrene; 37 (of males 15 and of females 22) to embolism, thrombosis (not cerebral); 19 (of males 6 and of females 13) to phlebitis; 11 (of males 2 and of females 9) to varicose veins, and 86 deaths (of males 49 and of females 37) to other diseases of the blood vessels.

With reference to the use of the term *paralysis*, when certifying the cause of death, the attention of the medical profession is asked to the note on page 27 of the Official Nomenclature of Diseases (1906), where it is pointed out that *paralysis* is the name of a symptom, and should only be used when more precise information is wanting. In the course of the work of classifying the causes of death for the year 1907, it was found necessary to ask for further information in 158 instances where *paralysis* was given as the cause of death.

Laryngitis.—From diseases of the larynx and trachea there were 264 deaths, namely, from laryngitis 100 deaths; from membranous laryngitis (not diphtheritic) 6 deaths; from croup (not stated to be epsemodic or diphtheritic) 149 deaths; and from other diseases of the larynx and trachea there were 9 deaths. Compared with the average annual number (613) of deaths attributed to the above causes in the decade 1891-1900 there appears to be a considerable decrease.

Bronchitis.—In the pillar diagram No. 2, facing page xiii., representing 23 of the principal causes of death in Ireland during the year 1907, bronchitis stands in the fourth place, no less than 7,845 deaths being attributed to this disease. The deaths from bronchitis represent a rate of 1·79 per 1,000 of the population, and form over 10 per cent. of the total deaths from all causes.

The deaths from bronchitis are 669 in excess of the numbered registered in the preceding year, but below the average for the preceding 10 years by 82 deaths.

In England and Wales during the year 1906, the mortality from bronchitis, compared with the total deaths from all causes, was 6·7 per cent.

Of the total deaths from bronchitis in Ireland in 1907, 1,563 were of children under 5 years of age, 962 being of infants under one year of age, the former figure being represented by a rate of 3·61 per 1,000 of the number of children living at that age, and the latter representing a rate of 9·46 per 1,000 births registered. Between the ages of 5 years and 45 years, the death rate from bronchitis is comparatively small, but in the succeeding age periods the rates were 1·45 per 1,000 of the estimated number of persons living in the age-period, 45 to 55 years, 4·97 per 1,000 living in the age-period, 55 to 65 years; 11·47 per 1,000 in the age-period, 65 to 75 years, and 14·85 per 1,000 living in the age-period, 75 to 85 years. From a comparison of the death rates from bronchitis at all ages in England and Wales and in Ireland for the ten years, 1897 to 1906, it appears that the average annual rate for bronchitis in Ireland exceeds that in England and Wales by 0·43 per 1,000. If the death rate from tuberculous disease be taken into account the disparity is still more marked, namely, a difference against Ireland of 1·42 per 1,000, or, in other language, if the death rates for tuberculous disease and for bronchitis obtained in Ireland as in England and Wales the average annual death rate from all causes for Ireland in the ten years 1897-1906, would read 16·48 instead of 17·90 per 1,000 of the population.

In a certain sense bronchitis may, from the public health point of view, be considered as a preventable disease, and the reduction of its death rate regarded as one of the indices of improvement in the social conditions under which our people are living.

Pleurisy.—Among diseases of the organs of respiration, pleurisy caused a total of 205 deaths, 120 being of males and 85 being of females. In the Official Nomenclature of Diseases, page 113, in a footnote it is stated that—"When the pleurisy is known to be tuberculous the fact should be stated." During the year 1907, 34 deaths were stated to have been caused by empyema directly; in each of these instances a query for further

information was issued, with the result that 13 deaths were stated to be due to tuberculous disease, 3 to pneumonia, and one each to enteric fever, influenza, and disease of spleen; and one to injury.

These have been embodied in the following table, which shows by sexes and age-periods, the results of such inquiries for the years 1904-1907, according to the disease which caused the empyema, or was associated with it.

Table showing for the years 1904-1907, by age periods, the diseases or causes with which the deaths directly attributed to Empyema of 121 persons (94 males and 27 females) were associated.

Diseases or causes (by Age-Periods) with which 94 Deaths of Males from Empyema were associated.

Gastric Ulcer.—The number of deaths which were registered during the year 1907 was 295, as against 300 such deaths registered in the preceding year, and an average of 281 deaths for the 5 years 1902-1906. Of the total deaths in 1907, the males numbered 119, and the females 176.

Appendicitis.—Deaths from appendicitis which had risen from 89 in the year 1906 to 136 in the year 1907, declined to 120 in the period under notice; of the deaths in 1907 there were 70 of males and 50 of females.

Peritonitis.—The number of deaths from peritonitis, concerning which a primary cause could not be given, was 115 (of males 59 and of females 56); the number of such deaths in 1906 was 128, and in 1905 there were 296 deaths attributed to peritonitis. The decline in the number of deaths returned from this cause in the years 1906 and 1907 is accounted for by the fact that in all instances where peritonitis was certified to have been the cause of death, queries asking for further information as to the cause of the condition were issued. The result of this work for the year 1907 reduced the number of deaths originally assigned to peritonitis from 231 to 115.

Among the causes to which deaths from peritonitis were assigned as the result of the enquiry referred to, were the following:—18 deaths to intestinal obstruction; 17 deaths to gastric ulcer; 13 deaths to tuberculous peritonitis; 12 deaths to appendicitis, and 5 deaths to cancer.

Cirrhosis of Liver.—On reference to the abstracts it may be seen that among diseases of the digestive system, 354 deaths were attributed to cirrhosis of the liver; of these 207 were deaths of males and 127 were of females.

Acute Nephritis, Chronic Nephritis.—The total mortality from acute and chronic inflammation of the kidneys is represented by an annual rate of 0·35 per 1,000 of the estimated population of the country. The deaths, 1,521 in number, were classified as follows:—422 to acute nephritis, uræmia, and 1,099 to chronic Bright's disease, albuminuria. Of the deaths from acute nephritis, 219 were of males and 203 were of females, and of the 1,099 deaths from chronic nephritis, 592 were of males and 507 were of females. The figures for the deaths of females include 16 in which the disease was associated with pregnancy and childbirth. (See Table XIII., page xxxi.).

Tumours and other diseases of the Ovaries and Uterus.—Of 93 deaths from diseases included in this heading, 36 were attributed to ovarian tumour and 34 to uterine tumour; these figures include tumours of the ovary and uterus, which were returned as being non-malignant and also those in which a request for further information as to the nature of the tumour failed in its object.

The 93 deaths do not include deaths from malignant disease of the uterus and ovaries; in Table XV. it may be seen that 262 were due to malignant disease of the former and 17 to malignant disease of the latter organs.

It would facilitate the classification of the causes of death if the nature of the tumour—when returned as the cause of death or associated therewith—be stated in all cases where it is possible to do so.

Diseases or Accidents of Pregnancy and Childbirth.—In the paragraph dealing with the puerperal septic diseases, it has been already stated that the deaths of 163 women were registered under one or other of the headings of this group. In the abstracts it may be seen that 22 deaths were caused by abortion, miscarriage, 12 by puerperal mania, 55 by puerperal convulsions, 109 by placenta prævia, flooding, and 144 by other accidents of childbirth; these latter forming a total of 342 deaths of women from the accidents of pregnancy and childbirth; it is however found in the course of the classification of causes of death that, in many instances, a pre-existing disease is returned as being associated with the condition of pregnancy or childbirth, and in Table XIII., page xxxi., such deaths, in number 84, are shown in age-periods and in combination with the associated disease or condition.

In the following table the number and rates per 1,000 births registered are given for each of the 3 categories of mortality in the preceding paragraph for the years 1906 and 1907, respectively.

| | Deaths from Puerperal Septic Diseases | | Deaths from Accidents of Pregnancy or Childbirth | | Total Deaths from Puerperal Septic Diseases and other accidents of Pregnancy or Childbirth | | Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing) | | Total Deaths caused by or associated with Pregnancy or Childbirth | |
|-----------------------|---------------------------------------|-----------|--|-----------|--|-----------|--|-----------|---|-----------|
| | Year 1906 | Year 1907 | Year 1906 | Year 1907 | Year 1906 | Year 1907 | Year 1906 | Year 1907 | Year 1906 | Year 1907 |
| Number | 224 | 183 | 273 | 342 | 497 | 525 | 61 | 84 | 438 | 569 |
| Rate per 1,000 Births | 2·28 | 2·00 | 2·40 | 3·06 | 4·68 | 4·06 | 0·67 | 0·82 | 5·35 | 5·09 |

From the above table it appears that the deaths from puerperal septic causes were 71 below the number registered in the year 1906, and that the deaths from accidents of childbirth were 31 below those registered in 1906; the deaths from causes associated with pregnancy and childbirth, however, were 15 more than the number registered in 1906.

An analysis of the deaths from accidents of childbirth in which a secondary cause was stated shows that in 37 deaths the complicating cause was syncope, heart failure or heart disease; in 12 deaths it was rupture of the uterus; in 21 deaths it was embolism or thrombosis; in 4 deaths the complicating cause was pneumonia, and in 3 it was bronchitis; in 3 cases deaths after Caesarian section were returned.

In 36 instances, deaths from accidents of pregnancy and childbirth were registered as being uncertified, or as having no medical attendant.

From calculations made on the number of legitimate and illegitimate births, respectively, the rate represented by deaths of married mothers (493) from diseases or accidents of pregnancy and childbirth was 4.97 per 1,000 legitimate births, and the rate for deaths of unmarried mothers (numbering 12) was 4.68 per 1,000 of illegitimate births.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

I regret to have to report that no less than 14,296 of the deaths which were registered in the year 1907 were referred to causes which are ill-defined, or not specified. Of these, 6,860 were deaths of males and 7,439 were deaths of females, the total of these deaths constituting over 18 per cent. of all the deaths registered during the year. The deaths under this heading comprise deaths stated to be due to *atrophy, debility, old age, dropsy, ascites, anasarca, tumour, abscess, hæmorrhage, sudden death (cause unascertained), other ill-defined causes, and causes not specified*. In this connection I may mention I am now issuing suggestions to each member of the medical profession in Ireland whose name appears on the Register, regarding certificates of causes of death, and most earnestly ask for help from one and all, to enable me to produce the mortality statistics of Ireland in as perfect a condition as is possible.

UNCERTIFIED DEATHS IN IRELAND.

The proportion of uncertified deaths to the total deaths is very much greater in Ireland than in England or Scotland, the proportion of uncertified cases in 1906 being, for England, 1.5 per cent.; for Scotland, in 1905, 2.3 per cent.; while for Ireland the proportion per cent. was 24.4 in 1906 and 24.9 in 1907 of all deaths registered.

There is no doubt that the large number of uncertified deaths in some of the Rural Districts in Ireland is to some extent due to the custom which prevails in some of the Rural parts of this country of not seeking medical advice, especially for the aged and those suffering from chronic forms of disease, and also to the very large area of most of the Rural Dispensary Districts which involves geographical difficulties both with the people in sending for medical help and the Medical Officers in attending to their requirements. In October, 1905, and in May, 1908, I issued a circular to all Medical Registrars, impressing upon them the importance of certifying the Cause of Death in every case in which they were professionally in attendance; and I also addressed the Local Government Board with the view to their using their influence with the Dispensary Medical Officers in this important matter. The percentage of such deaths of all deaths registered in 1902 was 27.6; in 1903, 28.3; in 1904, 28.3; in 1905, 28.8; in 1906, 24.4; and in 1907, 24.9.

VIOLENCE.

According to the nature of the application of the violence, deaths returned under this heading are classified into accidental, homicidal, and suicidal fatalities. The total number of deaths from accident, homicide, and suicide which were registered in Ireland during the year 1907 was 1,877—by accident 1,680, by homicide 39, and by suicide 148 deaths. Of the total deaths attributed to accidental circumstances 1,095 were of males and 595 were of females. Among these, burns, scalds, or explosions caused the deaths of 181 males and of 242 females, 120 of the former figure and 107 of the latter being deaths of children under 5 years of age. There were among males 248 casualties by drowning, and among females 58; the deaths of males caused by accidents with vehicles and horses numbered 162, and of females 19; 116 males and 133 females died from the effects of falls; the deaths of 46 males and 43 females were attributed to suffocation, 32 of the former and 42 of the latter being deaths of infants.

TABLE XVI.—Showing the Deaths registered from Typhoid in 1907, distinguishing the Sex and Age of Deceased, the Name of the Poison or Poisonous Gas, and whether Acetabular, Bacillid, or Entericoid.

| Name of Victim or Poisonous Gas | Males | | | | | | | | | | | Females | | | | | | | | | | | Total, Males and Females | | |

under one year of age. There were 43 deaths by accidental poisoning—27 of males and 16 of females. Details relating to deaths by poisoning whether accidental, homicidal or suicidal, are given in Table XVI, page xliii.

Of the 39 deaths referred to homicide, 27 of the victims were males and 12 were females.

The number of deaths of males by suicide was 116 and of females, 32.

No death by execution was registered in Ireland during the year 1907.

Inquests.—There were 1,728 inquests reported to the Registrars during the year 1907, being one inquest to every 45 deaths registered.

AGES AT DEATH.

The following Statement shows by sexes the mortality from all causes in Ireland during the Year 1907, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

| SEXES. | Mortality from all causes per 1,000 Living at Ages | | | | | | | | | | | |
|----------|--|-------------|------|------|------|------|------|-------|-------|-------|-------|----------------------|
| | All Ages | Under Years | 5— | 10— | 15— | 20— | 25— | 30— | 35— | 40— | 45— | 50 years and upwards |
| MALES. | 17.08 | 15.96 | 3.46 | 2.41 | 4.21 | 5.97 | 6.71 | 10.63 | 10.43 | 13.67 | 43.63 | 110.11 |
| FEMALES. | 15.43 | 11.40 | 3.94 | 3.41 | 5.65 | 6.78 | 6.81 | 9.45 | 16.09 | 19.85 | 73.00 | 105.42 |
| TOTAL. | 17.47 | 13.68 | 3.69 | 2.93 | 4.93 | 6.36 | 6.75 | 10.04 | 13.26 | 16.76 | 58.31 | 107.76 |

Amongst children under 5 years of age 14,570 deaths occurred—a mortality equal to 38.52 in every 1,000 of the number living at that age. Of these 7,846 were boys and 6,724 girls; the former number representing 35.36 in every 1,000 boys, and the latter 31.60 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 101.96 per 1,000 of the number of the living at that age.

Among the deaths registered are 700 of persons stated to have been aged 95 years or upwards—842 males and 358 females; of these 145 (71 males and 74 females) were returned as having been aged 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

INFANT MORTALITY.

The deaths of 9,334 infants who had not reached the age of one year were registered in the period under notice. Of the total, 5,286 were deaths of males and 4,048 were deaths of females. The 9,334 deaths represent an annual death rate of 92 for every 1,000 births registered during the year, showing a decrease of one per 1,000 when compared with the year 1906, and of 10 per 1,000 when compared with the average rate for the ten years preceding.

The aggregate rate of infant mortality for Ireland appears low when compared with that for England and Wales, which was 132 per 1,000 births in 1906; and for Scotland, which was 115 per 1,000 births registered in 1906.

It will, however, be seen in the enjoined table that for the total "Civic Unions" of Ireland, comprising a population of 1,571,410, the death rate was 124, and that for the remainder of Ireland the rate was 70 per 1,000 of the births registered.

Table showing for Ireland, for Unions containing towns which, in 1901, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths of infants by sexes at the undermentioned ages, per 1,000 births registered.

| AREAS | Males | | | | Females | | | | Total | | | |
|----------------------------|----------------|-------------|-----------|----------------|----------------|-------------|-----------|----------------|----------------|-------------|-----------|----------------|
| | Under 6 months | 6-12 months | 1-2 years | Under one year | Under 6 months | 6-12 months | 1-2 years | Under one year | Under 6 months | 6-12 months | 1-2 years | Under one year |
| Total "Civic Unions" | 104 | 150 | 104 | 119 | 117 | 121 | 115 | 117 | 110 | 151 | 104 | 124 |
| Remainder of Ireland | 110 | 110 | 100 | 104 | 105 | 90 | 111 | 102 | 108 | 100 | 116 | 104 |
| Total of Ireland | 107 | 130 | 102 | 111 | 111 | 105 | 113 | 109 | 109 | 125 | 110 | 114 |

A further investigation of infant mortality in Dublin Registration Area, in Belfast and in Cork is shown in the following table, and is graphically represented in diagram 6, facing this page.

Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county boroughs of Belfast and Cork, in the Large Towns of England,* and in 8 of the Principal Towns of Scotland, during the years 1901-1907.

| AREAS | Deaths of Infants under 1 Year of Age to every 1,000 Births. | | | | | | |
|--------------------------------|--|------|------|------|------|------|------|
| | 1901 | 1902 | 1903 | 1904 | 1905 | 1906 | 1907 |
| Dublin Registration Area | 168 | 162 | 151 | 140 | 137 | 146 | 128 |
| Belfast County Borough | 158 | 151 | 134 | 136 | 127 | 144 | 128 |
| Cork | 140 | 137 | 133 | 115 | 110 | 123 | 120 |
| Large English Towns* | 138 | 145 | 118 | 100 | 140 | 145 | 117 |
| 8 Scottish Towns | 139 | 136 | 127 | 113 | 119 | 130 | 126 |

* Excluding 22 towns in 1901 and 16 towns in years 1905-7.

From this table it appears that the infant mortality rate in Dublin Registration Area has declined from 168 in the year 1901 to 128 in the year 1907, the latter being very much in excess of the average rate of 76 Great Towns in England, namely 127 per 1,000, and of the average of 8 Scottish Towns, namely 128 per 1,000; in Belfast county borough the rate which in 1901 was 154, had fallen in 1907 to 126 deaths per 1,000 births registered, and that in Cork the rate which was 140 per 1,000 in 1901, declined to 121 in the year 1907; in each of these towns the rate for 1907 appears to be higher, especially in Dublin, than the respective averages for 76 English and 8 Scottish towns.

The following table gives the rates at certain age periods for the deaths of infants under 1 year, by diseases or groups of diseases, for 14 principal causes of death.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the Year 1907, distinguishing between those under 3 months old, 3 months and under 6, and 6 months and under 12.

| Causes of Death | | | | 0-3 Months | 3-6 Months | 6-12 Months | Total under One Year |
|---------------------------|--|--|--|------------|------------|-------------|----------------------|

| | Stiff-neck (malady over-laying) | | | 0-43 | 0-18 | 0-25 | 0-73 |
| | Other Causes, | | | 2-77 | 1-14 | 2-43 | 6-34 |

It appears from this table that, among the "common infective diseases," whooping-cough is the most fatal to infants under 1 year of age, causing a death rate of 3-45 deaths per 1,000 births; measles caused a rate of 1-42 and diphtheria, croup, a rate of 0-67 per 1,000 births registered during the year. The diarrhoeal diseases grouped with diseases of the stomach and intestines (not tuberculous) caused a death rate of 11-15 per 1,000 of the births registered; tuberculous disease in its various forms caused an aggregate death rate of 4-42 per 1,000 births registered. The group of diseases or causes under the heading of "wasting diseases" accounted for a death rate of 24-17 per 1,000, and included deaths returned under the ill-defined terms of *atrophy*, *debility*, or *marasmus*. Among the other diseases, the rate from deaths returned as being due to convulsions was 11-31 per 1,000 births, or representing more than 12 per cent. of all deaths of infants under one year registered in the period under notice.

With reference to the use of the term "convulsions" in certifying the cause of death—the following appears in a footnote on page 31 of the Official Nomenclature of Diseases (1906).—"This term, (*convulsions*), being the name of a symptom, should only be used when more precise information is wanting. When the cause is known, the return should be made under the head of that cause."

Bronchitis caused a rate of 9·45; pneumonia a rate of 4·81, and meningitis (not tuberculous) a rate of 1·40 per 1,000 births registered.

In the table on page xlvii., which has been constructed from information derived from the Yearly Summaries issued from my Office for the 5 years, 1903-1907, an opportunity is afforded of comparing the number of births, the number of deaths of infants under one year of age, the rate for such deaths per 1,000 births registered, and the death rate per 1,000 of the respective populations from all causes, for the 23 Principal Town Districts of Ireland.

EMIGRATION.

From the Returns collected and forwarded to me by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, it appears that the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1907 was 39,082; 21,124 of these were males and 17,958 females. Of the whole number, 5,711 were natives of the province of Leinster, 11,288 natives of Munster; 14,518 of Ulster; and 7,570 of Connaught.

Of the total emigrants from Ireland in 1907, 9·5 per cent. were under 15 years of age; 83·2 per cent. were between 15 and 35 years old; and 6·6 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1907 was 5½d., the average price in the year 1906, being 5½d.* Oatmeal (1st quality) averaged 14s. 7d. per cwt. in Dublin; the average price for 1906 being 14s. 6d.; the average prices of potatoes in Dublin ranged from 4s. 0d. to 4s. 6d. per cwt., against 2s. 10d. to 3s. 3d. in 1906; and those of beef from 52s. 0d. to 56s. 6d. per cwt., against 50s. 6d. to 53s. 0d. in 1906.

TABLE XVII.—AVERAGE PRICES IN DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1897-1907, and the AVERAGE NUMBER OF PERSONS IN IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES OF PROVISIONS, and the AVERAGE NUMBER OF PERSONS IN RECEIPT OF RELIEF during each quarter of the year 1907.

| Year. | Average Prices of Provisions. | | | | | | PAUPERISM. | |

| 4th " " " " " " " " | 5½ | 14 11 | 4 0 | to 4 0 | 53 0 | to 56 0 | 44,411 | 55,888 |

* Prices derived from returns received from Messrs. "Holands, Langels," and Messrs. "Johnston, Mooney, and O'Brien, Limited."

† Compiled from Returns forwarded by the Local Government Board.

‡ Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 1,150 in First Quarter, 15,600 in Second Quarter and 1,000 in Third Quarter.

From a retrospect of the period covered by the foregoing Table, *i.e.*, for the year 1907, and the ten years preceding, it is found that in the year 1898 the prices of beef were lowest, when the average ranged from 44s. 6d. to 53s. per cwt., and in 1897, when they ranged from 44s. 6d. to 57s.; bread was cheapest in 1899, 1900, and 1901, respectively, when the average price (1st quality delivered) was 5½d. per 4lb. loaf. Oatmeal (1st quality) was cheapest in 1901, in which year the average price was 13s. 4d. per cwt.; and potatoes in 1899, when the average range of prices was from 2s. 5d. to 3s. 5d. per cwt. The highest price of bread was in the year 1898, when the 4lb. loaf averaged 6½d., and in the same year the price of oatmeal was highest, *viz.*, 15s. 3d. per cwt. The highest range for potatoes was from 3s. 4d. to 4s. 7d. per cwt. in 1900, and for beef from 55s. 6d. to 59s. 6d. per cwt. in 1902.

I have been favoured by the Local Government Board for Ireland with the Returns embodied in this Report relating to Pauperism in Ireland for which I desire to express my obligations. These showed that the average number of workhouse inmates in Ireland on Saturdays during the year 1907 was 44,208, being 253 under the average for the preceding year; and that the average number of persons receiving out-door relief (see Table XVII.) was 56,556, or 485 under the corresponding number for 1906.

THE WEATHER.

As heretofore through the kind permission of the Editor of the "Dublin Journal of Medical Science," the following particulars and those given on pages 147-168 are presented. These particulars have been abstracted from Returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, B.A., M.D., DUB.; D.S.C., OXON.; F.R.C.P.I.; F.R. MET. SOC.; and published in the Journal during the years 1907-1908. The Tables on pages 169-171. are also founded on Sir John Moore's observations.

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least .01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1907 was 29.939 inches. The highest observed reading was 30.925 inches at 9 A.M. on January 23rd. The lowest observed reading was 28.788 inches, at 2 P.M. on October 18th. The extreme range of atmospheric pressure was 2.137 inches, as compared with 2.132 inches in 1906.

The Mean Temperature of the air for the year was 49.6°. The highest reading was 77.8° on July 17th, and the lowest reading was 27.4° on January 25th. The average mean temperature for the years 1887-1906 was 49.3°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 49.9°.

Rain fell on 218 days, including snow or sleet on 20 days and hail on 29 days. The average annual number of rainy days in the years 1887-1906 was 194.6. The total rainfall measured 26.994 inches, compared with an average of 26.668 inches in the twenty years 1887-1906. During the first half of 1907 (January to June, inclusive) the rainfall was 12.336 inches on 106 days; during the second half (July to December, inclusive) 14.658 inches fell on 110 days.

As regards the Direction of the Wind, 730 observations were made during the year, with this result—N., 24; N.E., 49; E., 67; S.E., 55; S., 73; S.W., 125; W., 126; N.W., 106; Calms, 26.

I have pleasure in stating that I am much indebted to Dr. Ninian M. Falkner, Medical Superintendent of Statistics in this Office, for the valuable assistance he has given to me in the preparation of this Report, and for his strenuous efforts to perfect, as far as possible, the Statistics of Disease and Causes of Death.

I have the honour to be,

Your Excellency's faithful Servant,

ROBERT E. MATHESON,
Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
DUBLIN, 16th July, 1908.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1907.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1907.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.

| SUPERINTENDENT REGISTRARS' DISTRICTS. | Area in Statute Acres. | Popu- lation, 1902. | TOTAL. | | | SEXES. | | | | EXCESS. | | Excess of Births over Deaths. | |

| 1907 | 2,115,456 | 1,696,112 | 4,219,344 | | | | | | | | |

NOTE.—This Table has been constructed for the years 1835 to 1864—By adopting the rate of increase between the population of 1835 and 1841, according to the Irish Census Report of 1841.

1865 to 1894—By taking the English average birth-rate of 1 in 51, and death-rate of 1 in 45, and deducting the excess emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1895 to 1907.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1895; an allowance, proportioned by the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1895 over the actual population as recorded by the Census of that year.

1908 to 1911.—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1906 and 1911 as explained for the last period.

1912-1967.—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1912-1915, 1919-20, and 1920-1921, to allow for the discrepancy between the number thus arrived at for 1911, 1921, and 1922 respectively, and the population as shown by the Census in each of these years.

AGES OF THE POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

| Years. | Sexes. | Age-Groups. | | | | | | | | | | | | | | Total. |
|--------|----------|-------------|----------------|-----------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|-----------|
| | | Under 1. | 1 and under 5. | 5 and under 10. | 10 and under 15. | 15 and under 20. | 20 and under 25. | 25 and under 30. | 30 and under 35. | 35 and under 40. | 40 and under 45. | 45 and under 50. | 50 and under 55. | 55 and under 60. | 60 and under 65. | |
| 1861. | Males. | 66,600 | 181,355 | 309,715 | 365,984 | 399,594 | 397,787 | 365,563 | 377,543 | 361,869 | 304,801 | 271,795 | 205,474 | 150,000 | 760 | 2,607,370 |
| | Females. | 51,264 | 179,515 | 302,533 | 343,487 | 377,495 | 361,108 | 318,511 | 318,511 | 281,853 | 224,550 | 166,968 | 111,000 | 67,000 | 1,700 | 2,595,997 |

| | Total. | 117,564 | 360,870 | 612,248 | 709,471 | 777,089 | 758,895 | 684,074 | 696,054 | 643,662 | 529,351 | 438,763 | 316,474 | 217,000 | 1,460 | 5,203,367 |
| 1901. | Males. | 43,905 | 150,504 | 270,437 | 374,827 | 430,000 | 417,127 | 380,860 | 380,860 | 340,860 | 280,860 | 210,860 | 150,860 | 100,860 | 50,860 | 2,500,000 |
| | Females. | 41,905 | 148,504 | 268,437 | 372,827 | 428,000 | 415,127 | 378,860 | 378,860 | 338,860 | 278,860 | 208,860 | 148,860 | 98,860 | 48,860 | 2,480,000 |
| | Total. | 85,810 | 299,008 | 538,874 | 747,654 | 858,000 | 832,254 | 759,720 | 759,720 | 679,720 | 559,720 | 419,720 | 300,720 | 199,720 | 99,720 | 4,980,000 |

* In 1860 there were in 1861—6,443 males, and 1,595 females; in 1871 there were in 1872, viz., 1,175 males, and 1,595 females; in 1881 there were in 1882, viz., 1,175 males, and 1,595 females; and in 1891 there were in 1892, viz., 1,175 males, and 1,595 females. The age was not stated in the returns.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1907.

By SIR JOHN W. MOORE, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.L.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*)

JANUARY.—A month remarkable for its high mean atmospheric pressure (30.803 inches), its scanty rainfall (only .428 inch in Dublin on only 9 days and extending over only 30 hours), its warm anticyclonic S.W. and W. winds from the 5th to the 18th, and its biting anticyclonic N.E. and S.E. winds from the 19th to the 26th. The former anticyclone was central over the ocean to the southward of Ireland and over the Bay of Biscay—hence the warmth of its S.W. and W. to N.W. winds, which raised temperature above the freezing point all over the British Isles, France and Germany. The latter anticyclone, on the contrary, advanced steadily south-westwards from the White Sea to the Gulf of Riga between Sunday, the 20th, and Wednesday, the 23rd. At 6 p.m. of Tuesday, the 22nd, the barometer read 31.68 inches at Riga, and at 8 a.m. of Wednesday, the 23rd, the isobar of 31 inches stretched westward to Ulster, the barometer reading 31.01 inches at Donaghadee. This vast anticyclone of abnormal intensity caused a fresh or strong current of wind from the eastward to blow across Central Europe to France and the British Isles; this wind carried with it bitter frost, the thermometer falling to -8° at Munich on the 22nd and to -22° at Riga on the 23rd. Even in Ireland a minimum of 17° was recorded at Birr Castle on the morning of the 24th, and during the following night at Llangammarch Wells, in Wales, the sheltered thermometer fell to 6° , and the instrument exposed on the grass to 1° . An extraordinary circumstance is that at 8 a.m. of Wednesday, the 23rd, the thermometer stood as high as 69° at Seydisfjord on the east coast of Iceland, where a S.W. gale was blowing at the time. This station in the far North-west was 40° warmer than Constantinople, 62° warmer than Munich, and 81° warmer than Riga on that eventful morning.

In Dublin the arithmetical mean temperature (42.7°) was above the average (41.6°) by 1.1 degrees; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41.7° . In the forty-two years ending with 1906, January was coldest in 1881 (M. T. = 38.2°), and warmest in 1898 (M. T. = 45.8°). In 1906 the M. T. was 43.9° .

The mean height of the barometer was 30.803 inches, or 0.428 inch above the corrected average value for January—namely, 30.374 inches. The mercury rose to 30.925 inches at 9 a.m. of the 23rd, having fallen to 29.955 inches at 9 p.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1.967 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41.7° , or 1.3° below the value for January, 1906. Using the formula, *Mean Temp.* = *Max. + (Max. - Min.) x .52*, the M. T. becomes 42.8° , compared with a thirty years' (1871-1900) average of 41.7° . The arithmetical mean of the maximal and minimal readings was 42.7° , compared with a thirty years' average of 41.6° . On the 1st the thermometer in the screen rose to 84.1° —wind, S.W.; on the 25th the temperature fell to 27.6° —wind, W. The minimum on the grass was 23.6° , also on the 25th.

The rainfall was only .428 inch, distributed over 9 days. Of this amount .188 inch fell on the 1st. The average rainfall for January in the thirty-five years, 1866-1900, inclusive, was 2.230 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were much below the average. The record rainfall for January was in 1895—namely, 6.711 inches on 24 days. In 1876, only .406 inch was measured on but 9 days. In 1906, 4.127 inches fell on 22 days.

The atmosphere was foggy on the 1st, 4th, 21st and 25th. High winds were noted on 13 days, reaching the force of a gale on 3 days—the 1st, 28th and 29th. Snow or sleet fell on the 2nd, 3rd, 23rd, 24th, 25th, 26th and 29th; hail on the 1st, 2nd, 23rd, 25th, 29th and 30th. Temperature reached or exceeded 50° in the screen on 10 days; while it fell to 32° in the screen on 4 nights, compared with 2 nights in 1906 and 1906, 3 in 1904, 7 in 1903 and 1903, 5 in 1901, 2 in 1900, 4 in 1899, only 1 night in 1898, 13 nights in 1897, only 3 in 1896, but 18 in 1895. The minima on the grass were 32° or less on 16 nights, compared with 11 nights in 1906, 9 nights in 1906, 11 in 1904, 9 in 1903, 12 in 1902, 11 in 1901, 13 in 1900, 16 in 1899, only 3 in 1898, 21 in 1897, 8 in 1896, and 29 in 1895.

In Dublin the rainfall up to January 31st, 1907, amounted to only .428 inch on but 9 days compared with 4.127 inches on 22 days in 1906, 1.897 inches on 14 days in 1906, 2.633 inches on 19 days in 1904, 3.269 inches on 20 days in 1903, 1.614 inches on 12 days in 1902, 2.672 inches on 17 days in 1901, 2.579 inches on 27 days in 1900, only .406 inch on 9 days in 1876, and with a thirty-five years' average (1866-1900) of 2.230 inches on 18 days.

Mr. William J. Good reports that, at the Notual Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30.299 inches, the range of atmospheric pressure being from 29.953 inches at 9 p.m. of the 1st to 30.928 inches at 9 a.m. of the 23rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42.3°. The arithmetical mean of the daily maximal and minimal temperatures was 42.7°. The screened thermometers rose to 54.4° on the 1st, and fell to 27.5° on the 25th. On the 24th the grass minimum was 20.7°. On the 16th the black bulb in vacuo rose to 75.1°. Rain fell on 6 days to the amount of .409 inch, the greatest fall in 24 hours being .184 inch on the 1st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 46.9 hours, of which 5.2 hours occurred on the 30th. The mean daily sunshine was 1.5 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41.0°; at a depth of 4 feet it was 44.0°.

The rainfall at the Ordnance Survey Office, Phoenix Park, Dublin, was .569 inch on 11 days, the maximum in 24 hours being .250 inch on the 1st. The total amount of sunshine was 53.5 hours, the largest daily amount was 7.2 hours on the 30th. The thermometer fell to 22.4° in the screen on the night of the 24th.

Dr. Arthur G. Price, writing from the Burnaby Estate, Greystones, Co. Wicklow, reports that the rainfall at that place was only .550 inch on 9 days, compared with 4.065 inches on 14 days in 1905 at Knockdoon, 1.005 inches on 11 days in 1903, 2.735 inches on 17 days in 1904, 3.300 inches on 15 days in 1903, 1.860 inches on only 9 days in 1902, and 4.035 inches on 16 days in 1901.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at .440 inch on 7 days, .190 inch being measured on the 1st, and .175 inch on the 28th. The thermometer on the grass fell to 20° on the 24th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was only .362 inch on 6 days, compared with 3.288 inches on 20 days in January, 1906. The greatest fall in 24 hours was .175 inch on the 1st. The mean shade temperature was 38.6°, the extremes being—highest, 50° on the 1st; lowest, 24° on the 31st.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was .54 inch on 7 days, the greatest daily measurement being .23 inch on the 1st. The thermometer in the shade ranged from 52° on the 1st to 27° on the 25th. The mean shade temperature was 41.3°. There were snow showers on the 22nd and 29th, and hail and sleet fell on the 28th.

The Rev. Arthur Wilson, M.A., reports that rain fell on 23 days at the Rectory, Dunmanway, Co. Cork, to the amount of 3.70 inches. The heaviest falls were .71 inch on the 1st, .41 inch on the 2nd, and .29 inch on the 19th. On the whole, it was a dry, cold month. Thunder and lightning occurred on the evening of the 2nd.

Dr. Christopher Joynt, F.R.C.P.I., recorded .431 inch of rain on 8 days at 21 Leeson Park, Dublin. The heaviest fall in 24 hours was .185 inch on the 1st.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Clonsilla, Killiney, at .63 inch on 6 days. The maximal fall in 24 hours was .27 inch on the 28th. The average January rainfall of the 29 years (1885-1906) was 3.422 inches on 17 days. The present record is the lowest rainfall for January at Clonsilla—only .06 inch fell on but 5 days from the 2nd to the 27th. In 1895, on the contrary, 5.93 inches were measured on 24 days, and in 1905, 4.08 inches on 22 days. Snow, sleet, or hail fell on the 28th and 29th.

FEBRUARY.—The weather was distinctly cold until the 14th, when a mild spell set in connected with a strong westerly or oceanic wind, which swept across Europe along isobars running from W. to E. and showing steep gradients. The cold weather at the beginning was of anticyclonic origin; afterwards it was related to the N.W. winds of certain V-shaped depressions which drifted in from the Atlantic.

From the 17th to the 22nd inclusive, very stormy, rough weather prevailed. This was brought about by the presence of unusually deep atmospheric depressions in the North, while an anticyclone covered the Peninsula and France. On the morning of the 18th, the barometer was down to 29.23 inches at Reykjavik in Iceland, whereas it was as high as 30.28 inches at Biarritz. But a still greater range of pressure was observed at 8 a.m. of Wednesday, the 20th, when the barometer reached the unusually low level of 27.65 inches at Skudsmoen, in the S.W. of Norway, the reading at Lisbon being 29.44 inches—a difference in atmospheric pressure at sea level of more than two inches and three-quarters (2.79 inches). Small wonder that a destructive tempest strewed the shores of North-Western Europe with wreckage. A fine display of aurora borealis was seen on the night of the 9th. During the last six days the weather was fine and quiet with densely overcast skies.

In Dublin the mean temperature (40.3°) was 2° below the average (42.5°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 38.3°. In the forty-three years ending with 1907, February was coldest in 1896 (M. T. = 34.7°), and warmest in 1869 (M. T. = 48.7°) and in 1903 (M. T. = 47.5°). In 1905 the M. T. was 39.7°.

The mean height of the barometer was 30.002 inches, or 0.147 inch above the average value for February—namely, 29.855 inches. The mercury rose to 30.572 inches at 9 a.m. of the 5th, and fell to 29.907 inches at 7 a.m. of the 12th. The observed range of atmospheric pressure was, therefore, 1.665 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 38.5° , or 2.8° below the value for January, 1907. Using the formula, *Mean Temp. = Min. + (Max. - Min.) x .50*, the M. T. is 40.3° , compared with a thirty years' (1871-1900) average of 42.5° . On the 15th the thermometer in the screen rose to 55.7° —wind, S.W.; on the 5th it fell to 28.4° —wind, W. The minimum on the grass was 24.0° on the 5th.

The rainfall was 1304 inches, distributed over 14 days. The average rainfall for February in the thirty-five years, 1868-1900, inclusive, was 1990 inches, and the average number of rainy days was 16. The rainfall, therefore, and the rainy days were below the average. In 1885 the rainfall in February was large—3752 inches on 17 days; in 1879 also 3706 inches fell on 23 days. On the other hand, in 1891, only .042 inch was measured on but 2 days. In 1906, 1844 inches fell on 20 days.

The atmosphere was foggy on the 1st, 2nd, 3rd, 5th, 12th, 13th and 14th. The amount of cloud—55.9 per cent.—was considerably below the average—66 per cent. At 9 p.m. it was only 52.9 per cent. High winds were noted on 9 days, and reached the force of a gale on 6 days—namely, the 12th, 16th, 17th, 18th, 19th and 20th. Hail fell on the 10th, 12th and 19th. Snow or sleet fell on the 4th, 8th, 12th, 20th, and 21st. Lunar halos were seen on the 18th, 21st and 22nd. Solar halos appeared on the 11th, 16th, and 19th. There was a fine *aurea borealis* on the night of the 9th, and a faint display on the 10th.

The temperature reached or exceeded 50° in the screen on 6 days, while it fell to or below 32° on 14 nights, compared with as many as 18 nights in 1896. The minima on the grass were 52° or less on 18 nights, compared with every night in 1896. The thermometer failed to rise to 40° in the screen on the 22nd and 23rd. The highest minimum was 48.4° on the 17th.

In Dublin the rainfall up to February 28th, 1907, amounted to 1732 inches on 23 days, compared with 5771 inches on 42 days in 1906, 3872 inches on 29 days in 1903, 3362 inches on 22 days in 1902, 5608 inches on 35 days in 1905, 5847 inches on 26 days in 1904, 2647 inches on 25 days in 1908, and a thirty-five years' (1868-1900) average of 4290 inches on 34 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 29.998 inches, the highest reading observed being 30.545 inches at 9 a.m. of the 5th, the lowest, 28.996 inches at 9 a.m. of the 12th. The mean temperature was 40.5° , the mean dry-bulb reading at 9 a.m. and 9 p.m. being 39.5° . The screened thermometers fell to 26.7° on the 3rd, and rose to 55.4° on the 15th. The grass minimum was 16.6° on the 3rd, while the black bulb in sun rose to 85.3° on the 18th. The mean daily maximum was 45.0° ; the mean daily minimum, 34.9° ; and the mean daily minimum on the grass, 29.4° . Rain fell on 12 days to the amount of 1.180 inches, .375 inch being measured on the 11th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 75.6, giving a daily average of 2.7 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 38.8° ; at a depth of 4 feet, it was 42.2° .

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as 1361 inches on 13 days, .426 inch having been measured on the 11th.

At the Ordnance Survey Office, Phoenix Park, the rainfall was 1357 inches on 13 days, the maximal measurement in 24 hours being .340 inch on the 11th.

Miss Muriel E. O'Sullivan reports that at White Cross, Stillorgan, Co. Dublin, 1.185 inches of rain fell on 14 days, .432 inch, the maximum, being measured on the 11th. Since January 1, the rainfall at this station equals 1.625 inches on 21 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 13 days to the amount of 1.29 inches, the greatest daily fall being .47 inch on the 11th. In February, 1901, the rainfall was 1.55 inches on 10 days; in 1902, it was 2.76 inches on 11 days; in 1903, 2.95 inches on 15 days; in 1904, 4.05 inches on 21 days; in 1905, 1.07 inches on 12 days, and in 1906, 2.03 inches on 18 days. The temperature in the shade ranged from 54° on the 15th to 28° on the 3rd. The mean temperature in the screen was 39.5° , compared with 39.0° in 1902, 47.1° in 1903, 40.4° in 1904, 43.6° in 1905, and 39.6° in 1906.

Mr. R. Cathcart Dobbe, J.P., reports that at Knockdolia, Greystones, Co. Wicklow, the rainfall was 1.230 inches. The heaviest fall in 24 hours was .650 inch on the 11th. In February, 1901, the rainfall was 1.385 inches on 11 days; in 1902, it was 2.590 inches on 8 days; in 1903, 2.870 inches on 14 days; in 1904, 2.957 inches on 19 days; in 1905, .650 inch on 9 days; and in 1906, 1.845 inches on 14 days.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded 1.58 inches on 13 days, .69 inch being measured on the 11th. The mean temperature of the month was 39° , the extremes being—highest, 56° , on the 18th; lowest, 28° , on the 2nd and 6th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1.613 inches on 14 days. The greatest fall in 24 hours was .55 inch on the 11th. The mean shade temperature was 37.1° , the extremes being—highest, 55° , on the 18th; lowest, 24° , on the 23rd.

The rainfall at Clonsilla, Killisay, Co. Dublin, as observed by Mr. Robert O'B. Furlong, C.B., amounted to 1.21 inches on 12 days, compared with 2.85 inches on 12 days in 1902, 2.08 inches on 14 days in 1903, 3.56 inches on 20 days in 1904, .79 inch on 14 days in 1905, and 1.31 inches on 17 days in 1906. The average rainfall for February during 22 years, 1885-1906, at this station

is 1·814 inches on 141 days. The greatest rainfall in 24 hours was '37 inch on the 11th. Since January 1 the rainfall was 174 inches on 18 days, compared with 539 inches on 39 days in 1906, 308 inches on 26 days in 1906, 698 inches on 37 days in 1904, 490 inches on 35 days in 1903, 397 inches on 24 days in 1902, and 459 inches on 25 days in 1901. Snow or sleet and hail fell on the 7th, 19th and 30th.

Dr. T. H. Peyton, M.B., Resident Medical Superintendent of the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, reports that in December, 1906, the rainfall at that station was 2209 inches on 12 days, the maximal measurement for 24 hours being '798 inch on the 15th. The mean temperature for the month was 42·5°, the extremes being—highest, 59° on the 1st; lowest, 25°, on the 29th.

The total rainfall for 1906 was 27'305 inches on 182 days.

In January, 1907, the rainfall was '467 inch on 7 days. The mean temperature was 42·5°; the screened thermometer rising to 53·8° on the 12th, having fallen to 22° on the 2nd and 3rd.

In February, the rainfall was 1·606 inches on 16 days, '762 inch falling on the 11th. The mean temperature was 41·2°. On the 16th the thermometer rose to 63·2° in the screen, having fallen to 27·5° on the 1st.

In 1907, up to February 28th, the rainfall at Newcastle amounted to 2073 inches on 23 days.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 5'87 inches on 19 days, the greatest fall in 24 hours being '98 inch on the 11th. The rainfall for January and February equals 6'07 inches on 41 days.

In the City of Cork, Mr. William Miller registered 1·86 inches of rain on 17 days, the largest measurement in 24 hours being '63 inch on the 11th. The rainfall was 1·67 inches below the average for February. During the first two months of 1907 the rainfall was 393 inches, or 4·70 inches below the average. The thermometer in the screen rose to 52° on the 15th and fell to 25° on the 24th. The mean temperature was 38·4°, or 4° below the average for the month.

Dr. J. Byrnes Power, D.P.H., F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 40·7°, being 2° below the average for February during 20 previous years (1873-83 and 1895-1906), the extremes being—highest, 56°, on the 16th and 18th; lowest, 29·6°, on the 1st. At Bournemouth the mean was 38·9°, the extremes being—highest, 68°, on the 17th; lowest, 23°, on the 3rd. The mean daily range was 9·5°; at Bournemouth it was 11·4°. The mean relative humidity was 81 per cent., being equal to the average for the month during the previous 6 years. The total rainfall was 1'21 inches on 14 days, being 0·93 inch below the average for the month during 17 previous years (1873-83 and 1901-06). The duration of bright sunshine was 267 hours, as compared with 314 hours at the Phoenix Park, 876 hours at Southport, and 105·6 hours at Bournemouth.

A comparison of the following meteorological conditions prevailing at Kingstown during 1906 with similar ones at other stations throughout the United Kingdom, as given in the Annual Summary recently issued by the Meteorological Office, may be of interest:—(1) The annual mean temperature, 50·4° at Kingstown, was higher than that at any of the other 131 stations given, with the exception of 20, and this, notwithstanding the excessive summer heat at 17 of those 20 stations. (2) The annual rainfall at Kingstown, 209 inches, was less than that at any other of the 140 stations given, with only 8 exceptions. (3) The total duration of bright sunshine at Kingstown, 1,688 hours, was greater than that at 85 out of the 130 other stations given.

MARCH.—A warm, but changeable and showery, March. The month opened and closed with mild weather. During the greater part of the time an anticyclonic distribution of atmospheric pressure was observed over the southern half of the British Isles, France and Germany. This accounted for the prevalent S.W. and W. winds and the frequent showers which fell in Ireland. A notable exception to anticyclonic conditions occurred on the 16th, when a deep depression passed across Ireland, and the barometer fell to 28·794 inches in Dublin. On the 19th there was a heavy rainfall in the metropolitan county, but the amounts registered were widely different—at Glasnevin, '86 inch; Fitzwilliam Square, '742 inch; the Ordnance Survey Office, Phoenix Park, '740 inch; Trinity College, '713 inch; Leeson Park, '655 inch; Killiney, '47 inch; Dundrum, '46 inch; and Stillorgan, '404 inch.

After a stormy period, which ended on the 20th, the weather was chiefly fine and quiet to the close of the month, and the absence of cloud, which was remarkable, led to a wide diurnal range of temperature—on the 28th the thermometer passed through 35° at Bath and Oxford, and even in Dublin the range was 25·1° on the 27th and 21·6° on the 29th. A fine display of aurora borealis was seen on the evening of the 21st.

In Dublin the arithmetical mean temperature (46·5°) was 2° above the average (43·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 45·3°. In the forty-two years ending with 1906, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1906 the M. T. was 44·4°.

The mean height of the barometer was 30·107 inches, or 0·191 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·432 inches at 9 a.m. of the 23rd and fell to 28·794 inches about 8.30 p.m. of the 16th. The observed range of atmospheric pressure was, therefore, 1·638 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 45.5° . Using the formula, *Mean Temp. =* $\frac{Max. + (Min. - Min.) \times 485}{2}$, the M. T. becomes 48.8° . The arithmetical mean of the maximal and minimal readings was 46.5° , compared with a thirty years' (1871-1900) average of 48.6° . On the 27th the thermometer in the screen rose to 64.1° —wind, S.W.; on the 31st the temperature fell to 31.8° —wind, W.N.W. The minimum on the grass was 28.9° , on the 23rd.

The rainfall was 1.934 inches, distributed over 19 days. The average rainfall for March in the thirty-five years, 1856-1900, inclusive, was 1.900 inches, and the average number of rainy days was 16.0. The rainfall, therefore, was very slightly below, while the rainy days were above, the average. In 1867 the rainfall in March was very large—4.972 inches on 23 days. On the other hand, the smallest March rainfall was .268 inch on 8 days in 1893. In 1902, only .963 inch fell on 13 days. In 1906 the rainfall was 1.520 inches on 17 days.

The atmosphere was foggy in the city on the 2nd, 9th, 23rd, 24th, 25th, 27th, and 31st. High winds were noted on 14 days, reaching the force of a gale on 7 occasions—namely, the 7th, 18th, 16th, 17th, 18th, 19th and 20th. Snow or sleet occurred on the 19th; hail fell on the 18th and 20th. Aurora borealis was seen on the 21st and 30th. Thunder was heard on the 31st. A solar halo appeared on the 10th, and a lunar corona on the 28th. Temperature reached or exceeded 50° in the screen on 25 days, compared with 17 days in 1905, 20 in 1906, 10 in 1904, 18 in 1903, 23 in 1902, only 6 in 1901, only 5 in 1900, 19 in 1899, 9 in 1898, 14 in 1897, and 21 in 1896. It fell to 32° in the screen on only one night—the 31st—and on the 27th it rose to 64.1° , and on the 29th to 65.3° . The minima on the grass were 32° or less on 9 nights, compared with 13 nights in 1906, 8 nights in 1905, 13 in 1904, 4 in 1903, 5 in 1902, 11 in 1901, 14 in 1900, 13 in 1899, 15 in 1898, 9 in 1897 and 8 in 1896.

The rainfall in Dublin during the three months ending March 31st amounted to 8.666 inches on 43 days, compared with 7.291 inches on 59 days in 1905, 5.578 inches on 45 days in 1906, 7.988 inches on 55 days in 1904, 9.128 inches on 61 days in 1903, 5.114 inches on 43 days in 1902, 5.656 inches on 46 days in 1901, 6.698 inches on 63 days in 1900, only 1.660 inches on but 32 days in 1899, and a thirty-five years' (1856-1900 inclusive) average of 6.170 inches on 50.0 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 30.104 inches, the highest reading observed being 30.420 inches at 9 p.m. of the 11th, the lowest, 29.923 inches at 9 p.m. of the 16th. The mean temperature was 45.9° , the mean dry-bulb reading at 9 a.m. and 9 p.m. being 48.0° . The screened thermometers rose to 64.8° on the 29th, and fell to 31.3° on the 31st. The grass minimum was 22.2° on the 3rd, while the black bulb ex vacuo rose in the sun to 109.2° on the 27th. The mean daily maximum was 53.1° ; the mean daily minimum, 38.7° ; and the mean daily minimum on the grass, 31.7° . Rain fell on 16 days to the amount of 1.833 inches, .713 inch being measured on the 19th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 137.6, giving a daily average of 4.4 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 44.0° ; at a depth of 4 feet, it was 44.2° . During the month the subsoil temperature at 4 feet increased from 42.5° on the 1st to 45.9° on the 31st.

Mr. R. Cathcart Debbé, J.P., reports that at Knockdolan, Greystones, Co. Wicklow, 1.810 inches of rain fell on 14 days. The maximal fall in 24 hours was .510 inch on the 19th.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded a rainfall of 1.35 inches on 14 days, the maximum in 24 hours being .52 inch on the 19th. The mean temperature of the month was 46° , the extremes being—lowest, 32° , on the 2nd, 30th and 31st; highest, 62° , on the 27th. The total rainfall at Clonsilla, Greystones, since January 1st, equals 3.190 inches on 38 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 18 days to the amount of 1.62 inches, compared with 2.20 inches on 13 days in 1901, 1.98 inches on 18 days in 1902, 4.53 inches on 28 days in 1903, 2.60 inches on 21 days in 1904, 5.31 inches on 28 days in 1905, and 1.80 inches on 17 days in 1906. The greatest daily rainfall was .44 inch on the 19th. The temperature in the shade ranged from 80° on the 27th and 29th to 38° on the 23rd. The mean shade temperature was 46.3° , compared with 41.2° in 1901, 46.4° in 1902, 45.7° in 1903, 44.1° in 1904, 45.0° in 1905, and 43.9° in 1906. Since January 1st, 1907, the rainfall at this station amounts to 3.45 inches on 38 days, compared with 6.71 inches on 40 days in the first quarter of 1901, 7.02 inches on 43 days in 1903, 11.56 inches on 42 days in 1903, 10.14 inches on 57 days in 1904, 8.76 inches on 56 days in 1905, and 8.67 inches on 56 days in 1906.

At White Cross, Stillorgan, Miss Mariel O'Sullivan measured 1.338 inches of rain on 20 days, the maximum in 24 hours being .404 inch on the 19th. At this station the rainfall in the first quarter of 1907 equals 2.968 inches on 41 days, compared with 6.938 inches on 48 days in 1905, and 7.810 inches on 56 days in 1906.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, as 1.727 inches on 18 days, .555 inch being measured on the 19th.

The rainfall at Clonevin, Killiney, Co. Dublin, as returned by Mr. Robert O'B. Furlong, C.B., was 1.53 inches on 17 days, compared with 1.32 inches on 18 days in 1905, .842 inches on 21 days in 1906, 2.01 inches on 17 days in 1904, 3.40 inches on 29 days in 1903, 1.50 inches on 21 days in 1902, 1.57 inches on 17 days in 1901, and a twenty-two years' (1885-1906) average of 1.912 inches on 16.7 days. The maximum in the 20 years was 3.59 inches,

in 1885; the minimum was '26 inch, in 1893. The heaviest fall in 24 hours was '47 inch on the 19th. At this station the total rainfall since January 1st was 9'27 inches on 36 days, compared with 6'91 inches on 57 days in the first quarter of 1905. In the first quarter of 1891 only 1'24 inches of rain fell on 26 days.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, as 1'677 inches on 15 days, compared with 3'473 inches on 24 days in 1905, and 1'071 inches on 16 days in 1906. The greatest rainfall in 24 hours was '488 inch on the 16th. The extremes of temperature in the shade were—highest, 57°, on the 25th; lowest, 29°, on the 30th; the mean temperature being 43'1°.

Mr. W. Miller registered 1'13 inches of rain at Cork on 15 days. The greatest fall in 24 hours was '60 inch on the 16th. The rainfall was 1'54 inches in defect of the average for March. The rainfall of the first quarter of 1907 was 4'06 inches, or 8'24 inches less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 2'48 inches of rain fell there in March on 18 days, '80 inch being measured on the 16th, '42 inch on the 18th, and '27 inch on the 17th.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 17 days to the total amount of 3'898 inches, the largest measurement being '740 inch on the 19th. The duration of bright sunshine was 152'7 hours, of which 11'3 hours occurred on the 29th.

APRIL.—A cloudy, unsettled, rainy or, rather, showery month. It would have been distinctly cold, like April, 1906, had it not been for a warm spell between the 22nd and 26th—the mean temperature of the 23rd was 60'2°, that of the 24th was 59'1°. With the exception of this brief foretaste of summer, the month was cool, cloudy, and marked by a prevalence of winds from polar quarters, principally the North-west. About two-thirds of the sky was clouded—the percentage of cloud at 9 a.m. being as much as 75. The evening skies were clear—at 9 p.m. the cloudiness was no more than 56'7 per cent. The estimated duration of sunshine was only 112'5 hours, or a daily average of 3'76 hours, compared with 165 hours, or a daily average of 5'3 hours in March, with its shorter days.

In Dublin the arithmetical mean temperature (47'2°) was 0'4° below the average (47'6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 46'2°. In the forty-three years ending with 1907, April was coldest in 1879 (the cold year) (M. T. = 44'5°), and warmest in 1893 (M. T. = 51'4°). In 1906 the M. T. was 45'9°.

The mean height of the barometer was 29'767 inches, or 0'063 inch below the average value for April—namely, 29'830 inches. The mercury rose to 30'367 inches at 9 a.m. of the 23rd, having fallen to 29'113 inches at 9 a.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 1'254 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46'2°, or only 0'9° above the value for March, 1907. Using the formula, *Mean Temp. = Min. + (Max. - Min.) × .476*, the value is 46'8°, or 0'6° below the average mean temperature for April, calculated in the same way, in the thirty years, 1871-1903, inclusive (47'3°). The arithmetical mean of the maximal and minimal readings was 47'2°, compared with a thirty years' (1871-1900, inclusive) average of 47'6°. On the 23rd the thermometer in the screen rose to 67'0°—wind, S.W.; on the 15th the temperature fell to 35'2°—wind, N.W. The minimum on the grass was 29'1° on the 5th.

The rainfall was 2'622 inches, distributed over 22 days. The average rainfall for April in the thirty-five years, 1866-1900, inclusive, was 1'850 inches, and the average number of rainy days was 15. The rainfall, therefore, was considerably in excess of the average, while the number of rainy days much exceeded it. In 1877 the rainfall in April was very large—4'707 inches on 21 days. On the other hand, in 1873, only '498 inch was measured on 8 days. In 1906, 1'829 inches fell on 18 days.

Fog was observed on the 4th, 5th, 10th, and 15th. Thunder occurred in a hail-storm about noon of the 27th. High winds were noted on 9 days, but only once reached the force of a gale—on the 18th. Hail fell on the 7th, 8th, 10th, 27th and 30th; snow and sleet on the 3rd and 6th. The temperature rose above 50° in the screen on 3 days. It failed to reach 60° on 4 days. It never fell to 32° in the screen, but on 6 nights it fell to or below 32° on the grass. The mean lowest temperature on the grass was 38'7°, compared with 33'3° in 1906, 37'3° in 1906, 39'1° in 1904, 37'0° in 1903, 36'8° in 1902, 37'3° in 1901, and only 31'6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 6'288 inches on 64 days, compared with 9'120 inches on 77 days in 1905, 7'844 inches on 71 days in 1906, 9'056 inches on 74 days in 1904, 10'176 inches on 78 days in 1903, 7'175 inches on 59 days in 1902, 6'620 inches on 58 days in 1901, only 3'203 inches on 45 days in 1891, and a thirty-five years' average of 8'120 inches on 65 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, returns the mean height of the barometer as 29'767 inches, the highest reading observed being 30'361 inches at 9 a.m. of the 26th, the lowest 29'123 inches at 9 a.m. of the 3rd. The mean temperature was 46'5°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 46'4°. Rain fell on 20 days to the amount of 2'891 inches, '329 inch being measured on the 2nd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 116'7, giving a

daily average of 3.9 hours: The corresponding figures for April, 1904, were 168 hours and 5.6 hours, for 1906, 105 hours and 3.3 hours, and for 1906, 182.0 hours and 6.1 hours. The highest temperature in the shade was 66.1° on the 23rd, the lowest was 31.1° on the 28th. The highest reading of the black bulb (a *vacuo* thermometer (solar radiation) was 121.5° on the 23rd. The lowest temperature on the grass (terrestrial radiation) was 21.8° on the 5th. The mean earth temperatures at 9 a.m. were—at a depth of one foot, 66.5°, at a depth of 4 feet, 46.4°.

Dr. T. H. Peyton returns the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, at 2.648 inches on 20 days, the maximal fall in 24 hours being .696 inch on the 2nd. Since January 1, 1907, the rainfall at this station amounts to 6.137 inches on 55 days. The thermometers in the screen rose to 65.2° on the 23rd and 24th, and fell to 35.0° on the 6th, 7th, 29th and 30th. At Newcastle, the rainfall in March, 1907, was 1.418 inches on 12 days, the maximum in 24 hours being .546 inch on the 16th. The mean temperature of the month was 48.2°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockodolan, Greystones, Co. Wicklow, the rainfall amounted to 2.610 inches on 18 days, compared with 1.755 inches on 9 days in 1906, 2.635 inches on 18 days in 1906, only .930 inch on 14 days in 1904, 1.185 inches on 9 days in 1903, 3.105 inches on 14 days in 1902, and 2.800 inches on 15 days in 1901. The heaviest fall in 24 hours was .680 inch on the 2nd. The total rainfall in 1907, up to April 30th, was 5.700 inches on 54 days, compared with 9.420 inches on 50 days in 1906, 8.436 inches on 58 days in 1905, 9.037 inches on 68 days in 1904, 12.385 inches on 63 days in 1903, 9.315 inches on 48 days in 1902, and 10.060 inches on 56 days in 1901.

Dr. Arthur G. Price reports that at Clonsilla, Greystones, the rainfall of April was 2.26 inches, on 18 "raindays," the heaviest daily rainfalls being .58 inch on the 2nd and .49 inch on the 5th. The mean temperature was 48°, the extremes being—highest, 66° on the 23rd, lowest, 30° on the 4th.

According to Mr. Robert O'Brien Furlong, C.B., at Clonsilla, Killybeg, Co. Dublin, 2.41 inches of rain fell on 23 days. The maximal fall in 24 hours was .44 inch on the 2nd. Hail or sleet fell on 8 days. The average rainfall in April of the twenty-two years, 1885-1906, was 1.807 inches on 14.8 days. Since January 1, 1907, 5.88 inches of rain fell at this station on 58 days, compared with 8.53 inches on 73 days in 1906, 9.17 inches on 69 days in 1905, 9.02 inches on 69 days in 1904, 9.67 inches on 76 days in 1903, 8.08 inches on 59 days in 1902, and 7.62 inches on 59 days in 1901. The temperature range was from 53° to 62°.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 2.43 inches on 28 days, compared with 1.68 inches on 17 days in 1906, 8.14 inches on 24 days in 1905, 1.48 inches on 18 days in 1904, 1.35 inches on 18 days in 1903, 2.63 inches on 16 days in 1902, and 1.19 inches on 12 days in 1901. The greatest daily rainfall was .59 inch on the 2nd. The mean shade temperature was 46.4°, compared with 48.3° in 1901, 48.6° in 1902, 45.9° in 1903, 48.9° in 1904, 46.4° in 1905, and 45.4° in 1906. The thermometric range was from 64° on the 23rd and 24th to 33° on the 15th. Hail fell on the 27th and 30th.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 2.313 inches on 19 days, compared with 1.388 inches on 13 days in 1906, and 1.773 inches on 25 days in 1903. The greatest fall in 24 hours was .335 inch on the 2nd. The shade mean temperature was 44.0°, compared with 43.6° in 1906 and 44.8° in 1905, the extremes being—highest, 67° on the 23rd, lowest, 28.5° on the 4th.

In Cork, according to Mr. W. Miller, the rainfall amounted to 2.89 inches on 19 days, .75 inch being measured on the 5th. Since January 1, 1907, 6.95 inches of rain have fallen in Cork against an average, for the first four months of the year, of 12.78 inches.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 2.595 inches on 22 days, the largest amount recorded in 24 hours being .430 inch on the 2nd.

The rainfall recorded by Miss Muriel O'Sullivan at White Cross, Stillorgan, was 2.455 inches on 23 days, compared with 1.700 inches on 19 days in 1906, and 3.122 inches on 24 days in 1905. The maximum in 24 hours was .500 inch on the 2nd.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 22 days to the amount of 2.442 inches, the greatest measurement in 24 hours being .315 inches on the 13th.

Dr. J. Byrne Power, F.R. Met. Soc., D.P.H., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 46.4°, being 1.3° below the average for April during the 20 previous years (1873-93 and 1898-1906). The extremes were—highest, 65.5° on the 23rd and 24th; lowest, 32.5° on the 15th. At Bournemouth the mean was 46.6°, the extremes being—highest, 69° on the 24th; lowest, 31° on the 15th and 20th. The average mean temperature for the past winter (Nov., Dec., Jan., Feb. and March) was—at Kingstown, 46.1°; at Bournemouth, 41.7°. The total winter rainfall was—at Kingstown, 8.18 inches; at Bournemouth, 8.34 inches. The mean daily range of temperature at Kingstown was 10.2°, at Bournemouth it was 14.6°. The mean temperature of the sea at Sandycove bathing-places was 46.4°, or 0.5° above the average for the month during the previous 9 years. The mean relative humidity was 77 per cent., being 1 per cent. above the average for the month during the previous 6 years. The rainfall for the month was 2.44 inches on 20 days, or 0.67 inch above the

average for April during 17 previous years (1873-83 and 1901-06). At Bournemouth the rainfall amounted to 3.40 inches on 19 days. The duration of bright sunshine was 136.0 hours, which was 32.1 hours below the average for the month during the previous 5 years. At Southport it was 160.8 hours, and at Bournemouth 166.9 hours.

MAY.—The month opened with low barometer readings and strong and squally westerly winds, rising to a gale on the 2nd and 4th. Then came a week of southerly winds and heavy rains—the measurement for the week ended Saturday, the 11th, being 2.215 inches, of which 1.115 inches fell on the night of the 6th in connection with a thunderstorm. Cold winds from polar quarters brought low temperatures after Tuesday, the 14th, but the rainfall was slight and infrequent till the 29th, when a shallow atmospheric depression spread in from the Atlantic and threw the weather into a gloomy, damp and rainy state, which lasted to the close of the month.

In Dublin the arithmetical mean temperature (51.4) was 0.7° below the average (52.1°). The mean dry-bulb readings at 9 a.m. and 3 p.m. were 50.8°. In the forty-three years ending with 1907, May was coldest in 1869 (M. T. = 48.2°), and warmest in 1893 (M. T. = 56.7°). In 1906 the M. T. was 51.7°.

The mean height of the barometer was 29.813 inches, or 0.176 inch below the corrected average value for May—namely, 29.989 inches. The mercury rose to 30.334 inches at 9 p.m. of the 17th, having fallen to 29.130 inches at 12.35 p.m. of the 2nd. The observed range of atmospheric pressure was, therefore, 1.204 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 3 p.m. was 50.8°, or 4.6° above the value for April, 1907—46.2°. Using the formula, *Mean Temp. = Min. + (Max. - Min.) × .47*, the value is 51.0°, or 0.7° below the average mean temperature for May, calculated in the same way, in the thirty years, 1871-1900, inclusive (51.7°). The arithmetical mean of the maximal and minimal readings was 51.4°, compared with a thirty years' average of 52.1°. On the 37th the thermometer in the screen rose to 87.5°—wind, E.; on the 1st the temperature fell to 34.4°—wind, W.N.W. The minimum on the grass was 31.0°, also on the 1st.

The rainfall amounted to 3.211 inches, distributed over 17 days. The average rainfall for May in the thirty-five years, 1866-1900, inclusive, was 2.020 inches, and the average number of rainy days was 15. The rainfall and the rainy days were, therefore, both above the average. In 1886 the rainfall in May was very large—5.472 inches on 21 days; in 1869, also, 5.414 inches fell on 19 days. On the other hand, in 1895, only .177 inch was measured on but 3 days. In 1896 the fall was only .190 on 7 days. In 1906, 2.472 inches fell on 20 days.

A solar halo appeared on the 1st, 5th, 21st and 29th. High winds were noted on 9 days, and attained the force of a gale on the 2nd and 6th. Hail fell on the 2nd and 21st. There was a fog on the evening of the 26th. Lightning was seen on the 5th, and a thunderstorm occurred on the evening of the 6th.

During the month the thermometer did not fall below 32° in the screen, but on the 1st it fell to 31.0° on the grass. The mean minimal temperature on the grass was 41.8°, compared with 41.3° in 1906, 42.5° in 1905, 42.8° in 1904, 44.3° in 1903, 40.3° in 1902, 41.7° in 1901, and 37.6° in 1894. The maximum reached or exceeded 60° on 9 days, but never fell short of 50°. The absolute maximum was 67.5° on the 27th.

The rainfall in Dublin during the five months ended May 31st amounted to 9.499 inches on 81 days, compared with 11.552 inches on 97 days in 1906, 9.096 inches on 81 days in 1905, 11.741 inches on 92 days in 1904, 12.660 inches on 95 days in 1903, 9.273 inches on 81 days in 1902, 7.724 inches on 67 days in 1901, 5.971 inches on 70 days in 1896, and a thirty-five years' average of 10.140 inches on 80 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, returns the mean height of the barometer as 29.816 inches, the highest reading observed being 30.334 inches at 9 p.m. of the 17th, the lowest, 29.171 inches at 9 p.m. of the 2nd. The arithmetical mean temperature was 49.7°, the mean dry-bulb reading at 9 a.m. and 3 p.m. being 50.8°. Rain fell on 18 days to the amount of 3.013 inches, 1.085 inches being measured on the 6th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 173.0, giving a daily average of 5.6 hours. The corresponding figures for May, 1904, were 192.5 hours and 6.2 hours, for 1905, 215.7 hours and 7.0 hours, and for 1906, 182.6 hours and 4.3 hours, respectively. The mean earth-temperature at 9 a.m. was 51.8° at a depth of one foot below the surface, 49.8° at 4 feet. The corresponding values for 1906 were 50.7° and 48.6°. The highest temperature recorded by the black bulb in *vacuo* (solar radiation) was 124.4° on the 13th, the lowest temperature on the grass (terrestrial radiation) was 33.1° on the 21st. The highest temperature in the shade was 65.4° on the 27th; the lowest was 30.3° on the 18th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall measured by Mr. R. Cathcart Doherty, J.P., was 4.920 inches, distributed over 15 days—1.680 inches falling on the 6th, and .560 inch on the 10th. The total fall since January 1st, 1907, equals 10.62 inches on 69 days, compared with 11.665 inches on 66 days in 1906, 9.611 inches on 67 days in 1905, 12.027 inches on 84 days in 1904, 15.635 inches on 79 days in 1903, 11.750 inches on 68 days in 1902, 11.205 inches on 65 days in 1901, and only 5.716 inches on 52 days in 1896.

Dr. Arthur G. Price measured 4'82 inches of rain on 16 days at Clonsilla, Greystones, Co. Wicklow. The heaviest fall in 24 hours was 1'49 inches on the 6th. In addition, 56 inch fell on the 10th and 51 inch on the 5th.

According to Mr. Robert O'B. Furlong, C.B., the rainfall at Clonsilla, Killinney, was 3'64 inches on 15 days, compared with 2'55 inches on 20 days in 1906, 1'83 inches on 9 days in 1905, 2'48 inches on 15 days in 1904, 2'54 inches on 15 days in 1903, 2'58 inches on 21 days in 1902, and 1'90 inches on 10 days in 1901. The maximal fall in 24 hours was 1'17 inches on the 6th. The average rainfall in May at this station during the 22 years, 1885-1906, inclusive, was 2'115 inches on 13'8 days. Since January 1st, 1907, 9'22 inches of rain have fallen at Clonsilla on 73 days.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, as 3'65 inches on 16 days, compared with 2'74 inches on 21 days in 1906, 1'42 inches on 11 days in 1905, 2'46 inches on 18 days in 1904, 2'86 inches on 18 days in 1903, 3'38 inches on 22 days in 1902, and 1'09 inches on 10 days in 1901. The greatest daily measurement was 1'06 inches on the 6th, when there was a thunderstorm. The temperature in the shade ranged from 36° on the 1st to 66° on the 24th. The mean temperature of the month was 51'1°, compared with 51'8° in 1906, 54'5° in 1905, 53'3° in 1904, 53'1° in 1903, 50'5° in 1902, and 52'6° in 1901. There were hail showers on the 1st and 2nd.

Dr. T. H. Peyton reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 4'885 inches on 18 days, the greatest fall in 24 hours being 1'992 inches on the 6th. From January 1, 1907, to May 31st, inclusive, 11'018 inches of rain were measured at this station on 74 days. The screened thermometers ranged from 34'4° on the 22nd to 62'5° on the 25th.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 3'665 inches of rain on 17 days, the maximum in 24 hours being 1'100 inches on the 6th.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 3'235 inches on 16 days, 1'110 inches being measured on the 6th.

Mr. T. Bateman returns the rainfall at the Green, Malahide, Co. Dublin, at 3'200 inches on 18 days, compared with 3'174 inches on 19 days in 1906. The greatest rainfall in 24 hours was 1'09 inches on the 6th. The extremes of temperature in the shade were—highest, 67°, on the 27th; lowest, 33°, on the 21st. The mean temperature was 48'7°, compared with 49'7° in 1906.

Mr. W. Miller registered 3'58 inches of rain at Cork on 19 days. The greatest fall in 24 hours was 50 inch on the 1st and 12th. The rainfall was 1'38 inches in excess of the average for May. The rainfall of the first five months of 1907 was 10'63 inches, or 4'81 inches less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 6'27 inches of rain fell there on 22 days, '94 inch being measured on the 30th, '75 inch on the 1st and 29th, and '70 inch on the 9th.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 18 days to the total amount of 2'774 inches, the largest measurement being 1'040 inches on the 6th. The duration of bright sunshine was 165'7 hours, of which 13'6 hours occurred on the 19th.

JUNE.—It seemed hardly possible that a more inclement June than that of 1879—the "cold year"—could occur. And yet June, 1907, establishes a record for low temperature, wind and rain-frequency in Dublin. There were only 3 days on which rain was not measured in appreciable amount. The wind blew strongly on as many as 17 days, chiefly from westerly points of the compass, and the mean temperature was only 55'4° compared with 55'9° in June, 1879. The rainfall was not as heavy as in that phenomenally cold June, when 4'046 inches were recorded on 24 days; but it was more frequent, for the rain-days numbered 37 out of 30. At 9 a.m. three-fourths of the sky were, on the average, covered with clouds, and throughout the month there was an unusual tendency to a formation of cirrus cloud at a great height.

In Dublin the arithmetical mean temperature (55'4°) was below the average (58'0°) by 2'6°, the mean dry-bulb readings at 9 a.m. and 9 p.m. were 54'4°. In the forty-three years ending with 1907, June was coldest in 1883 (M. T. = 55'8°) and 1879 ("the cold year") (M. T. = 55'8°). It was warmest in 1887 (M. T. = 62'3°); in 1896 (M. T. = 61'4°); and in 1899 (M. T. = 61'5°). In 1906 the M. T. was 59'6°. June, 1907, thus establishes a record for coldness.

The mean height of the barometer was 29'761 inches, or 0'156 inch below the corrected average value for June—namely, 29'917 inches. The mercury rose to 30'232 inches at 9 p.m. of the 16th, having fallen to 29'399 inches at 9 a.m. of the 10th. The observed range of atmospheric pressure was, therefore, 0'833 inch.

The mean temperature deducted from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54'4°, or 3'6° above the corresponding M. T. for May, 1907. Using the formula, $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times \frac{1}{465}$, the value was 54'9°, or 1'5° below the average mean temperature for June, calculated in the same way, in the thirty years, 1871-1900, inclusive (57'5°). The arithmetical mean of the maximal and minimal readings was 55'4°, compared with a thirty years' average of 58'0°. On the 14th the thermometer in the screen rose to 65'2°—wind, S.W.; on the 25th the temperature fell to 43'0°—wind, W.S.W. The minimum on the grass was 40'2° also on the 25th.

The rainfall amounted to 2·837 inches on 27 days. The average rainfall for June in the thirty-five years, 1865-1900, inclusive, was 1·920 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days were considerably above the average. In 1878 the rainfall in June was very large—5·068 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1889, only 1·00 inch was measured on 6 days. In 1887 the rainfall was only 252 inch, distributed over 5 days. In 1906, 1·049 inches fell on 12 days.

High winds were noted on as many as 17 days, and reached the force of a gale on the 3rd, 20th and 24th. A solar halo was seen on the 30th. Temperature never exceeded 65·2° in the screen. Thunder and lightning occurred on the 10th and 24th. Hail fell on the 10th, 24th and 28th—in a severe hailstorm on the 24th.

The rainfall in Dublin during the six months ending June 30th amounted to 12·336 inches on 108 days, compared with 12·641 inches on 109 days in 1906, 10·201 inches on 92 days in 1905, 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903, 13·344 inches on 98 days in 1902, 9·362 inches on 80 days in 1901, only 6·741 inches on 87 days in 1887, and a thirty-five years' average of 12·080 inches on 95 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, returns the mean height of the barometer as 29·767 inches, the highest reading observed being 30·285 inches at 9 p.m. of the 18th, the lowest, 29·403 inches at 9 a.m. of the 10th. The arithmetical mean temperature was 54·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 54·6°. The thermometer rose to 65·7° in the shade on the 16th, and fell to 40·0° on the 17th. The grass minimum was 34·9° on the 7th. Rain fell on 23 days to the amount of 2·732 inches, 501 inch being measured on the 4th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 129·4, giving a daily average of 4·3 hours. The corresponding figures for 1906 were 217·6 hours and 7·5 hours, and for 1905, 210·3 hours and 7·0 hours. The mean earth temperature read at 9 a.m. was 55·6° at a depth of 1 foot below the surface of the ground, 52·3° at a depth of 4 feet.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 3·470 inches on 23 days, compared with 870 inch on 7 days in 1906, 1·500 inches on 10 days in 1905, 2·280 inches on 10 days in 1904, 1·785 inches on 11 days in 1903, and 3·341 inches on 18 days in 1902. The heaviest rainfall in 24 hours was 400 inch on the 11th and 22nd. The total fall since January 1 has been 14·090 inches on 92 days, compared with 12·335 inches on 73 days in 1906, 11·111 inches on 77 days in 1905, 14·307 inches on 94 days in 1904, 17·440 inches on 90 days in 1903, 16·091 inches on 84 days in 1902, 13·670 inches on 75 days in 1901, and only 7·356 inches on 61 days in 1896.

At Clonsilla, Greystones, Co. Wicklow, Dr. Arthur G. Price measured 5·390 inches of rain on 25 days; 58 inch being recorded on the 4th and 5th taken together. The mean temperature was 56°, the extremes being—highest, 71°, on the 10th; lowest, 41°, on the 24th.

Dr. Francis P. Leyland reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell on 27 days to the amount of 3·703 inches, the maximal fall in 24 hours being 485 inch on the 8th. The mean temperature for the month was 53·8°, the extremes being—highest, 67·5° on the 7th; lowest, 43·0° on the 22nd and 25th. The June rainfalls in recent years at this station were—1903, 2·004 inches on 12 days; 1904, 2·494 inches on 12 days; 1905, 2·051 inches on 13 days; 1906, 831 inch on 13 days.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 2·67 inches on 27 days, compared with 1·36 inches on 15 days in 1906, 1·51 inches on 12 days in 1905, 1·22 inches on 14 days in 1904, 1·54 inches on 19 days in 1903, 3·08 inches on 19 days in 1902, and 1·71 inches on 13 days in 1901. The greatest daily fall was 39 inch on the 10th. The mean shade temperature was 58·6°. The thermometric range was from 67° on the 4th and 16th to 46° on the 3rd and 16th.

The rainfall recorded at Clonsilla, Killiney, Co. Dublin, by Mr. R. O'B. Furlong, C.B., was 2·45 inches on 23 days, compared with 87 inch on 11 days in 1906 and 1·56 inches on 11 days in 1905. The maximal fall in 24 hours was 54 inch on the 4th. The average rainfall in June in the 22 years (1885-1906) was 1·753 inches on 13·0 days. The total fall at Clonsilla since January 1, 1907, amounts to 11·67 inches on 96 days, compared with 12·36 inches on 89 days in the first six months of 1905, and 11·95 inches on 104 days in 1906.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, was 2·872 inches on 23 days, compared with 1·77 inches on 13 days in 1906. The heaviest fall in 24 hours was 506 inch on the 4th. The mean shade temperature was 54·2°, the extremes being—highest, 69·3° on the 15th; lowest, 38·0° on the 24th. The M. T. was 58·4° in 1903, and 57·4° in 1906.

Dr. C. Joynt returns the rainfall at 21 Leeson Park, Dublin, at 2·582 inches on 24 days, 440 inch having been recorded on the 4th.

At White Cross, Stillorgan, Co. Dublin, Miss Muriel O'Sullivan registered a rainfall of 2·416 inches on 23 days—the largest measurement in 24 hours being 260 inch on the 4th.

The Rev. Arthur Wilson, M.A., reports a rainfall of 5·90 inches on 25 days at the Rectory, Dunmaway, Co. Cork. The month was very wet and cold. On the 11th 77 inch was measured; on the 4th 72 inch, and on the 24th 50 inch. The rainfall for the first six months of 1907 at Dunmaway was 20·27 inches. At 5 p.m. of the 30th, thunder and lightning occurred and a hailstorm "with hailstones as large as small marbles."

Mr. W. Miller returns the rainfall at Cork as 353 inches on 25 days—this amount exceeding the average for June by 77 inch. The greatest rainfall in 24 hours was 31 inch on the 11th. The rainfall of the first six months of 1907 in Cork was 1416 inches, or 832 inches below the average.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell in June on 26 days to the total amount of 3'049 inches, 590 inch being registered on the 7th. The duration of bright sunshine was 1163 hours, the most in one day being 10·6 hours on the 29th.

JULY.—True to the character of 1907, July was a changeable month, full of surprises. Until the 12th the weather was unseasonably cold and very showery. In Dublin rain fell daily on the first nine days—heavily on the 2nd (390 inch), and 3rd (460 inch). On the latter day a thunderstorm occurred at 1 p.m. On the 12th a warm period set in, lasting till the 22nd. The warmth was at first accompanied by gloom and a muggy atmosphere, but the 17th and 18th were perfect summer days. On the 19th a series of electrical disturbances began, thunder and lightning prevailing day after day for four days. Near Dublin the centre of the storms was over the mountains, an easterly sea breeze along the coast piling up vast masses of cumulus above the hills. On the afternoon of Sunday, the 21st, the display of forked lightning over the mountains was very fine, and torrential, though local, showers sent a freshet down the Bray Water. From the 24th to the end of the month, showery weather again prevailed, and the wind became strong and gusty from S.W. to N.W. points of the compass.

In Dublin the arithmetical mean temperature (59°6') was 09° below the average of the 35-years 1871-1905 (60°5'); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58°7'. In the forty-three years ending with 1907, July was coldest in 1879 ("the cold year") (M. T. = 57°2'). It was warmest in 1905 (M. T. = 63°8'); in 1887 (M. T. = 63°7'); in 1868 ("the warm year") in 1901 (M. T. = 63°5'); and in 1900 (M. T. = 63°4'). In 1906 the M. T. was 60°7'.

The mean height of the barometer was 30'014 inches, or 0'099 inch above the corrected average value for July—namely, 29'915 inches. The mercury rose to 30'507 inches at 9 a.m. of the 11th, and fell to 29'450 inches at 9 p.m. of the 3rd. The observed range of atmospheric pressure was, therefore, 1'057 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58°7', or 4°3' above the value for June, 1907. Using the formula, *Mean Temp. = Min. + (Max. - Min.) × .485*, the value was 59°1', or 1°0', below the average mean temperature for July, calculated in the same way, in the thirty-five years 1871-1905 inclusive (60°1'). The arithmetical mean of the maximal and minimal readings was 59°6', compared with a thirty-five years' average of 60°5'. On the 17th, the thermometer in the screen rose to 77°3'—wind, N.W. On the 11th the temperature fell to 43°8'—wind W.N.W. The minimum on the grass was 39°7', also on the 11th.

The rainfall was 2'022 inches, distributed over 19 days. The average rainfall for July in the thirty-five years 1871-1905, inclusive, was 2'68 inches, and the average number of rainy days was 17. The rainfall, therefore, was below, while the rainy days were above, the average. In 1880 the rainfall in July was very large—6'087 inches on 24 days; in 1896, also, 5'474 inches fell on 18 days. On the other hand, in 1870, only 539 inch was measured on 8 days; in 1889, the fall was only 789 inch on 9 days; and in 1888, 741 inch fell on but 5 days. In 1906, 1'023 inches fell on 13 days.

High winds were noted on only 2 days, and never attained the force of a gale. Temperature reached or exceeded 70° in the screen on 8 days, compared with 10 days in 1906, 17 days in 1905, 10 days in 1904, and 7 days in both 1902 and 1903. The thermometer failed to reach 60° on the 8th, when the maximum was 59°7'. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68°7'.

A solar halo was seen on the afternoon of the 7th. Thunder-storms occurred on the 3rd, 21st, and 22nd; thunder was heard on the 5th, 20th and 21st; and lightning was seen on the 19th, 21st and 31st. There was a fog on the 14th.

The rainfall in Dublin during the seven months ending July 31st amounted to 14'358 inches on 127 days, compared with 13'664 inches on 122 days in 1906, 11'022 inches on 109 days in 1905, 13'905 inches on 117 days in 1904, 19'072 inches on 131 days in 1903, 15'507 inches on 115 days in 1902, 11'432 inches on 93 days in 1901, 17'809 inches on 129 days in 1900, 14'416 inches on 107 days in 1899, 18'080 inches on 106 days in 1898, 15'600 inches on 125 days in 1897, 7'935 inches on 89 days in 1887, and a thirty-five years' (1871-1905) average of 14'71 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 30'020 inches, the range of atmospheric pressure being from 30'511 inches at 9 a.m. of the 11th to 29'457 inches at 9 p.m. of the 3rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58°9'. The arithmetical mean of the daily maximal and minimal temperatures was also 58°9'. The screened thermometers rose to 79°5' on the 17th, and fell to 43°0' on the 11th. On the 11th the grass minimum was 35°0'. On the 17th the black bulb in 24 hours rose to 125°5'. Rain fell on 18 days to the amount of 1'777 inches, the greatest fall in 24 hours being 385 inch on the 3rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 178·1 hours, of which 13·2 hours occurred on the 18th. In July, 1904, there were 201 hours of bright sunshine, in July, 1905, 162·2 hours, and in July, 1906, 184·8 hours. The mean sub-soil temperatures were—at 1 ft., 59°0'; at 4 ft., 50°7'. The one-foot thermometer ranged between 56°7' on the 7th and 63°9' on the 19th. The four-foot thermometer ranged from 58°9' on the 1st to 57°9' on the 31st.

Dr. Arthur S. Goff reports that at Lynton, Dunderum, County Dublin, the rainfall was 1.79 inches on 16 days. The maximal fall in 24 hours was .37 inch, measured on the 5th. The mean temperature was 61.0°, the range being from 81° on the 16th to 44° on the 11th. In July, 1901, 2.65 inches of rain fell at this station on 11 days; in 1902, 4.27 inches on 91 days; in 1903, 3.65 inches on 24 days; in 1904, 1.22 inches on 17 days; in 1905, .98 inch on 20 days; and in 1906, 1.25 inches on 18 days.

At White Cross, Seilorgan, Miss Muriel E. O'Sullivan measured 1.831 inches of rain on 18 days, the largest amount which fell in 24 hours being .280 inch on the 2nd.

At Clonsavin, Killiney, Co. Dublin, Mr. Robert O'Brien Purlong, C.B., reports that the rainfall in July was 1.94 inches on 18 days, compared with a twenty-two years' (1885-1906) average of 2.434 inches on 18.0 days. On the 3rd the rainfall was .38 inch. In July, 1906, .97 inch fell on 14 days; in 1905, 1.03 inches fell on 15 days; in 1904, only .77 inch on 15 days; in 1903, 3.54 inches on 19 days; in 1902, 3.64 inches on 13 days; in 1901, 2.80 inches on 13 days. Thunder occurred on the 19th, 20th, 21st and 22nd. Since January, 1, 1907, 18.61 inches of rain have fallen on 114 days at this station, compared with 18.54 inches on 95 days in the corresponding 7 months of 1901, 16.90 inches on 111 days in 1902, 17.39 inches on 122 days in 1903, 18.69 inches on 110 days in 1904, 13.59 inches on 104 days in 1905, and 12.72 inches on 118 days in 1906. The lowest July fall was .70 inch on 9 days in 1885; the highest, 6.72 inches on 30 days in 1896.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was 1.758 inches on 17 days. The largest daily fall was .245 inch on the 2nd, and again on the 24th. The mean shade temperature was 59.1°, the extremes being—highest, 76.5° on the 17th; lowest, 42.0° on the 30th.

At the Ordnance Survey Office, Phoenix Park, rain fell on 18 days to the amount of 2.151 inches, the greatest rainfall in 24 hours being .415 inch on the 9th. The total duration of bright sunshine was 174.9 hours, the longest daily sunshine being 13.3 hours on the 17th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 2.525 inches on 13 days, compared with 1.095 inches on 13 days in 1906, 1.932 inches on 11 days in 1905, 1.395 inches on 15 days in 1904, 2.790 inches on 17 days in 1903, 4.550 inches on 11 days in 1902, and 2.390 inches on 10 days in 1901. Of the total rainfall .830 inch fell on the 13th. The total fall since January 1st has been 16.615 inches on 105 days, compared with 13.630 inches on 86 days in 1906, 13.043 inches on 88 days in 1905, 15.702 inches on 109 days in 1904, 20.230 inches on 107 days in 1903, 19.641 inches on 95 days in 1902, and 16.060 inches on 85 days in 1901.

Dr. Arthur G. Price reports that at Clonsilla, Greystones, rain fell on 18 days to the amount of 2.23 inches. The mean temperature was 55.0°, the extremes being—highest, 77° on the 17th; lowest, 44° on the 10th, 11th and 30th. The heaviest rainfall in 24 hours was .55 inch on the 13th.

Dr. Francis P. Leyland reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell on 18 days to the amount of 2.209 inches, the maximal fall in twenty-four hours being .385 inch on the 9th. The mean temperature for the month was 58.6°; the extremes being—highest 79.0° on the 17th; lowest, 43.4° on the 11th. The July rainfalls in recent years at this station were—1903, 4.309 inches on 22 days; 1904, 2.258 inches on 18 days; 1905, 1.991 inches on 12 days; 1906, .934 inch on 13 days. Since January 1, 16.930 inches of rain have fallen at this station on 119 days.

According to Mr. W. Miller, the rainfall in Cork City was 2.20 inches, or .43 inch less than the average, and the rainy days were 13. The greatest fall was .85 inch on the 24th. The mean temperature of the month was 58.6°, or 1.7° below the average for July. The thermometer rose to 78.0° on the 18th and 19th, and fell to 41.0° on the 2nd. The rainfall for 1907 up to July 31st was 16.36 inches—or 4.25 inches less than the average for the first seven months of the year—on 110 days.

The Rev. Arthur Wilson, M.A., reports a rainfall of 2.17 inches on 12 days at Dunmanway Rectory, Co. Cork. The heaviest falls in 24 hours were—.50 inch on the 4th, and .48 inch on the 24th. There was absolute drought from the 13th to the 22nd, with very hot weather, especially on the 17th and 18th. During the first week there was an exceedingly cold N.W. wind. Sheet lightning was seen on the nights of the 22nd.

Dr. J. Byrne Power, D.P.H., F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that station was 58.5°, being the lowest mean for July, as compared with a record of 20 previous years (1873-93 and 1898-1906), and 2.1° below the average for the month during these 20 years. The extremes were—highest, 75.5° on the 18th; lowest, 42.5° on the 11th. At Bournemouth the mean was 59.1°, being the lowest mean for the month at that station, as compared with a record of 9 previous years, and as much as 3.7° below the average during these years. The extremes were—highest, 79°, on the 16th; lowest, 45°, on the 13th. The mean range of temperature was 11.6° at Kingstown, and at Bournemouth 14.4°. The average temperature of the sea at Sandycove bathing-place was 58.2°, being only 0.3° below the average for the month during the previous 9 years, and the only July during those years for which the mean temperature of the sea was higher than that of the land. The mean relative humidity was 76 per cent., being the average percentage for the month at Kingstown during 6 previous years. The rainfall amounted to 2.16 inches on 16 days, being 0.33 inch below the average for the month during 17 previous years (1873-93 and 1901-06). The duration of bright sunshine was 175.8 hours, being 2.5 hours below the average of the month during the previous 6 years. The duration at the Ordnance Survey Office, Phoenix Park, Dublin, was 174.9 hours, 22.39 hours at Bournemouth, and 218.3 hours at Southport.

August.—While August partook of the changeable character of its predecessors, it was not an unfavourable month. The mean temperature was 54° below that of the exceptionally warm August of 1906, and also about one degree below the average for August in the 35 years, 1871-1905. The wind blew with great persistence from westerly (S.W., W. & N.W.) points, and often with considerable force. More than six-tenths of the sky was clouded over, the percentage of cloud being greater—contrary to the rule—at 9 p.m. (63.6 per cent.) than at 9 a.m. (59.7 per cent.).

In Dublin the arithmetical mean temperature (58.8°) was below the average (59.7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 57.8° . In the forty-three years ending with 1907, August was coldest in 1881 (M. T.— 57.0°), and warmest in 1899 (M. T.— 63.4°). In 1906 the M. T. was 63.2° .

The mean height of the barometer was 29.927 inches, or 0.030 inch above the corrected average value for August—namely, 29.897 inches. The mercury rose to 30.383 inches at 9 p.m. of the 21st, and fell to 29.517 inches at 9 a.m. of the 4th. The observed range of atmospheric pressure was, therefore, .866 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57.8° . It was 0.9° below the value for July, 1907. Using the formula, *Mean Temp. = Min. + (Max.—Min.) \times .47*, the mean temperature was 58.4° , or 0.9° below the average mean temperature for August calculated in the same way, in the thirty-five years 1871-1905, inclusive (59.3°). The arithmetical mean of the maximal and minimal readings was 58.8° , compared with a thirty-five years' average of 59.7° . On the 18th, the thermometer in the screen rose to 73.1° —wind, S.S.W.; on the 30th, the temperature fell to 44.1° —wind, N.W. The minimum on the grass was 40.7° , also on the 30th.

The rainfall was 2.230 inches on 19 days. The average rainfall for August in the thirty-five years 1871-1906, inclusive, was 3.24 inches, and the average number of rainy days was 18. The rainfall, therefore, was below the average, while the rainy days were slightly above the average. In 1900, the rainfall in August was very large—5.871 inches on 17 days; in 1889, also, 5.747 inches were registered on 22 days. On the other hand, in 1884, only .777 inch was measured on 8 days. August, 1906, established a record for rainfall in this month in Dublin, for the measurement was 7.019 inches on 22 days, 5.436 inches having fallen on the 25th. In 1906, the rainfall was 1.761 inches on 17 days.

High winds were noted on 15 days, but attained the force of a gale on only one day, the 16th, and then only for a short time. Temperature reached 70° in the screen on only one day, the 13th, compared with 7 days in August, 1901, only one day in both 1902 and 1903, 9 days in 1904, one day in 1905, and 17 days in 1906. A solar halo was seen on the 24th. Hail fell on the 15th. There was fog on the 30th. Lightning was seen on the night of the 9th, and aurora borealis at 9 p.m. of the 31st.

The rainfall in Dublin during the eight months ending August 31st amounted to 16.588 inches on 146 days, compared with 15.435 inches on 139 days in 1906, 18.041 inches on 131 days in 1905, 16.808 inches on 135 days in 1904, 21.873 inches on 157 days in 1903, 18.455 inches on 135 days in 1902, 14.384 inches on 108 days in 1901, 9.455 inches on 96 days during the same period in 1887, and a thirty-five years' average (1871-1905) of 17.95 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. J. E. W. Flood reports that the mean height of the barometer was 29.929 inches. The range of atmospheric pressure was between 30.386 inches at 9 p.m. of the 21st and 29.616 inches at 9 a.m. of the 4th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58.7° . The arithmetical mean of the daily maximal and minimal temperatures was 58.9° . The screened thermometers rose to 73.8° on the 13th, and fell to 43.1° on the 30th. On the 24th the grass minimum was 37.3° . On the 28th the black bulb *de vane* rose to 133.6° . Rain fell on 19 days to the amount of 3.215 inches, the greatest fall in 24 hours being .481 inch on the 29th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 151.4 hours, of which 97 hours occurred on the 6th, 9.4 hours on the 10th, and 9.4 hours on the 27th. In August, 1904, there was 183.75 hours of bright sunshine, in 1905, 121.9 hours, and in 1906, 176.9 hours. The mean earth-temperatures were—at 1 ft., 59.1° ; at 4 ft., 57.3° . The one-foot thermometer ranged between 60.7° on the 14th and 56.9° on the 30th. The four-feet thermometer ranged from 58.0° on the 1st to 56.9° on the 22nd and following days.

According to Mr. Robert O'Brien Furlong, C.B., at Clonsilla, Kildiney, Co. Dublin, 2.19 inches of rain fell on 17 days. The maximal fall in 24 hours was .50 inch on the 29th. The average rainfall in August of the twenty-two years, 1885-1906, was 3.239 inches on 17.0 days. Since January 1st, 1907, 15.80 inches of rain fell at this station on 131 days.

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park at 2.355 inches, of which .520 inch fell on the 29th, and .340 inch on the 28th. The rainy days were 21. In July, 1.875 inches of rain fell at this station on 17 days, the largest daily fall being .470 inch on the 3rd. On the 2nd, also, .348 inch was recorded.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 3.51 inches on 19 days. The maximal falls in 24 hours were .48 inch on the 28th, and again on the 29th. The corresponding figures for 1901 were 3.11 inches on 16 days, for 1902, 2.78 inches on 18 days, for 1903, 2.78 inches on 25 days, for 1904, .98 inch on 20 days, for 1905, 9.35 inches on 21 days, and for 1906, 1.48 inches on 15 days. The mean shade temperature was 59.8° , the range being from 73° on the 13th to 44° on the 30th. In August, 1901, the M. T. was 60.5° , in 1902, it was 58.7° , in 1903, 58.6° , in 1904, 60.5° , in 1905, 59.1° , and in 1906, 63.6° .

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 2841 inches of rain on 19 days, the largest amount which fell in 24 hours being 540 inch on the 29th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2326 inches on 20 days; the heaviest fall in 24 hours was 417 on the 2nd. In August, 1906, 2369 inches fell on 17 days, the greatest fall in 24 hours being 552 inch on the 23rd. The mean shade temperature was 58.1°, the extremes being—highest, 72.0° on the 8th; lowest, 38.0° on the 31st.

According to Mr. R. Cathcart Dobbs, J.P., at Knockdolian, Greystones, Co. Wicklow, the rainfall for August was 1950 inches on 17 days, compared with 1755 inches on 13 days in 1905, 8915 inches on 22 days in 1905, 2875 inches on 20 days in 1904, 2570 inches on 27 days in 1903, 3520 inches on 18 days in 1902, and 3825 inches on 15 days in 1901. The heaviest fall in 24 hours was 370 inch on the 28th. The total fall since January 1st, amounts to 18545 inches on 122 days, compared with 15455 inches on 99 days in 1906, 21068 inches on 110 days in 1905, 18577 inches on 129 days in 1904, 33100 inches on 134 days in 1903, 23161 inches on 111 days in 1902, and 19655 inches on 100 days in 1901.

At Clonsilla, Greystones, Co. Wicklow, Dr. Arthur G. Price recorded a rainfall of 189 inches, distributed over 16 days. The greatest measurement in 24 hours was 38 inch on the 28th. The mean temperature was 55.5°, the highest being 80° on the 13th; the lowest 39° on the 31st.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. Francis P. Leyland measured 2663 inches of rain on 18 days, the maximum in 24 hours being 596 inch on the 29th. Up to August 31st, the rainfall of 1907 at this station amounts to 19493 inches on 137 days. The mean temperature for August was 57.4°, the extremes being—highest, 75.2° on the 13th; lowest, 42.8° on the 30th.

According to Mr. W. Miller, the rainfall in Cork City was 296 inches, or 0.52 inch less than the average, and the rainy days were 19. The greatest fall was 73 inch on the 2nd. On the 11th 65 inch fell during a violent thunderstorm from 9 to 10 p.m. The mean temperature of the month was 57.2°, or 2.5° below the average. The thermometer rose to 67.5° on the 20th and fell to 45.0° on the 22nd. The rainfall for 1907 up to August 31st, was 1934 inches, compared with an average of 2411 inches.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 808 inches on 20 days. The largest measurements in 24 hours were 130 inches on the 2nd, and 96 inch on the 3rd and again on the 11th. A great thunderstorm occurred on the night of the 11th, with vivid lightning for 2 hours. Between 7.30 p.m. and 10.30 p.m. 76 inch of rain fell.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 23 days to the amount of 2867 inches, the largest measurement in 24 hours being 550 inch on the 29th. The total duration of bright sunshine was 1607 hours, the longest daily spell being 108 hours on the 10th.

SEPTEMBER.—September, 1907, opened with as cold a spell as has been observed at this season for very many years, but on the 5th there was a sudden rise of temperature, and the remainder of the month was warm, fine, and tranquil, like the Septembers of 1865, 1898, and 1908. In the wake of a baric depression, which was central near Malin Head on the morning of the 2nd and afterwards travelled north-eastwards to Norway, fresh N.W. winds brought clouds, showers, and low temperature. On the 3rd the thermometer in Dublin ranged from 42.8° to 52.5°, and the mean was 47.4°. On September 2, 1906, the thermometer rose from a minimum of 58.9° to a maximum of 77.8°. The mean of that hot September day was 63.4°, or 21° above that of the cold September 3rd of 1907. In the unsettled first week the dominant wind was S.W., and rain fell on 5 days to the amount of 514 inch. During the rest of the month there were only 2 "rain days," and the measurement was only 335 inch. The fine autumnal weather was due to the existence over the British Isles, France and Germany of an anticyclone of unusual staying power and immobility.

In Dublin the arithmetical mean temperature (57.8°) was 1.9° above the average (55.9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 56.5°. In the forty-three years ending with 1907, September was coldest in 1886 and 1892 (M. T. = 53.0°), and warmest in 1865 (M. T. = 61.4°) and 1896 (M. T. = 60.2°). In 1906 the M. T. was 57.1°.

The mean height of the barometer was 30.091 inches, or 0.181 inch above the corrected average value for September—namely, 29.910 inches. The mercury rose to 30.472 inches at 9 a.m. of the 18th, having fallen to 29.486 inches at 11.15 a.m. of the 2nd. The observed range of atmospheric pressure was, therefore, .986 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56.8°, or only 1.0° below the value for August, 1907. Using the formula, $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times .476$, the mean temperature was 57.5°, or 1.5° above the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871-1906, inclusive (56.7°). The arithmetical mean of the maximal and minimal readings was 57.8°, compared with a thirty-five years' average of 55.8°. On the 10th the thermometer in the screen rose to 71.2° wind, S.E.; on the 4th the temperature fell to 38.7°—wind, N.W. The minimum on the grass was 34.5° on the 4th.

The rainfall was 562 inch on 7 days. The average rainfall for September in the thirty-five years, 1871-1906, inclusive, was 2210 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4048 inches on, however, only 13 days; in 1896 no less than 5073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only .056 inch was measured on but 3 days. In 1906, 696 inch fell on 7 days.

High winds were noted on only 2 days, and never attained the force of a gale. The atmosphere was foggy on the 3rd, 7th, 8th, 18th, 26th, 21st, 22nd, and 30th. A solar halo was observed on the 8th. Lightning was seen on the 10th.

The rainfall in Dublin during the nine months ending September 30th amounted to 17.140 inches on 153 days, compared with 16.121 inches on 145 days in 1906, 19.266 inches on 145 days in 1905, 19.147 inches on 152 days in 1904, 28.269 inches on 174 days in 1903, 21.425 inches on 149 days in 1902, 18.070 inches on 124 days in 1901, only 10.968 inches on 112 days in 1887, and a thirty-five years' average of 20.160 inches on 146 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. J. E. W. Flood, Sch., reports that the mean height of the barometer was 30.098 inches. The range of atmospheric pressure was from 29.506 inches at 9 a.m. of the 2nd to 30.473 inches at 9 a.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57.6°. The arithmetical mean of the daily maximal and minimal temperatures was 57.8°. The screened thermometers rose to 72.8° on the 10th, and fell to 39.1° on the 4th. On the latter date the grass minimum was 31.1°. On the 7th the black bulb in *vacuo* rose to 134.3°. Rain fell on 6 days to the amount of .454 inch, the greatest fall in 24 hours being .238 inch on the 3rd. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 56.2 hours, of which 9.1 hours occurred on the 10th. The mean earth temperatures were—at 1 ft., 57.3°; at 4 ft., 56.3°. The one-foot thermometer ranged from 59.4° on the 11th to 53.6° on the 4th. The four-feet thermometer ranged from 58.9° on the 1st, 3rd, and 7th, to 55.9° on the 8th.

Dr. Francis P. Leyland reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was .939 inch on 8 days, the maximal daily fall was .380 inch on the 3rd. On the 4th also .322 inch fell. The thermometer in the shade rose to 68.4° on the 9th and fell to 38.2° on the 4th. The mean temperature was 67.6°. Up to September 30th the rainfall of 1907 has amounted to 20.432 inches on 145 days.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Clonsilla, Kildiney, Co. Dublin, was only .62 inch on 7 days, the maximum being .27 inch on the 3rd. The average September rainfall at this station in 22 years (1885-1906) was 2.00 inches on 13 days. Partial drought prevailed from the 4th to the 30th, only .17 inch of rain having fallen. Between the 8th and 30th inclusive, only .05 inch fell. Up to the 30th, from January 1st, 18.32 inches of rain had fallen on 136 days. In 1906, the September rainfall was only .34 inch on 6 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was .900 inch on 7 days, compared with .338 inch on 8 days in 1905, 1.055 inches on 10 days in 1906, 2.880 inches on 12 days in 1904, 3.980 inches on 20 days in 1903, 5.995 inches on 12 days in 1902, and 6.430 inches on 19 days in 1901. The heaviest fall in 24 hours was .300 inch on the 3rd. At Knockdolian the rainfall since January 1st, 1907, has been 19.465 inches on 129 days, compared with 16.793 inches on 105 days in 1906, 22.113 inches on 120 days in 1905, 31.467 inches on 141 days in 1904, 27.060 inches on 154 days in 1903, 27.156 inches on 133 days in 1902, and 28.105 inches on 119 days in 1901.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded a rainfall of .85 inch on 7 days. The greatest rainfall in 24 hours was .30 inch on the 3rd. Temperature was highest (70°) on the 5th and 6th, lowest (38°) on the 3rd. The mean temperature was 66°.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at .67 inch on 8 days, compared with 5.03 inches on 18 days in 1901, 4.09 inches on 19 days in 1902, 4.33 inches on 21 days in 1903, 2.94 inches on 19 days in 1904, 1.67 inches on 16 days in 1905, and .62 inch on 8 days in 1906. The greatest daily fall was .34 inch on the 3rd. The mean temperature in the shade was 58.2°, compared with 55.5° in 1903, 66.2° in 1904, 54.9° in 1905, and 57.8° in 1906. The screened thermometers, rose to 70° on the 9th and 10th, and fell to 40° on the 4th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was .602 inch on 7 days, the greatest fall in 24 hours being .306 inch on the 2nd. The mean shade temperature was 56.9°, the extremes being—highest, 71° on the 12th; lowest, 36° on the 3rd. In September, 1906 the rainfall was .481 inch on 9 days.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.L., registered .567 inch of rain on 8 days, the greatest fall in 24 hours being .275 inch on the 3rd.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 2.28 inches on 9 days, the heaviest fall in 24 hours being .83 inch on the 25th. No rain fell from the 10th to the 24th, and only .08 inch from the 8th to the 24th.

Mr. Wm. Miller states that in the City of Cork the rainfall was 2.32 inches on 9 days, or 0.66 inch below the average for September. The rainfall was greatest on the 26th, when 1.29 inches was measured. In the 9 months ended September 30th, the rainfall was 21.66 inches, or 6.23 inches less than the average.

Miss Muriel E. O'Sullivan reports that at Whitecross, Stillorgan, Co. Dublin, the rainfall was 1.071 inches on 9 days, of which amount .395 inch was measured on the 3rd.

The rainfall recorded at the Ordnance Survey Office, Phoenix Park, was only .459 inch on 7 days, the greatest measurement in 24 hours being .200 inch on the 3rd. The total amount of sunshine at this station was 106.4 hours, the most registered on any one day being 9.8 hours on the 21st.

OCTOBER.—True to its wonted character, October of this year was a rainy month—the total fall being 5·121 inches on 29 "rain-days." The heaviest rainfalls took place on the 8th (7·11 inch), 30th (5·19 inch), and 9th (4·80 inch). But the month was mild.

The unusual number of 29 "rain-days" establishes a record for wetness, but the total rainfall was exceeded in October, 1875 (7·049 inches on 26 days), and 1880 (7·253 inches on 15 days). In the latter October 1890 inches fell on the 5th, and no less than 2·736 inches on the 27th. Thunder and lightning, with heavy rain, prevailed between 4 and 7 p.m. of the 9th. A fragment of a rainbow-coloured solar halo was seen at 9 a.m. of the 30th.

In Dublin the arithmetical mean temperature (48·9°) was very slightly above the average (49·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 49·4°. In the forty-three years ending with 1907, October was coldest in 1892 (M. T. = 44·8°) and in 1896 (M. T. = 45·0°). It was warmest in 1876 (M. T. = 53·1°). The M. T. in 1906 was 51·2°.

The mean height of the barometer was 29·551 inches or 0·279 inch below the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·092 inches at 9 p.m. of the 4th, and fell to 28·768 inches at 2 p.m. of the 18th. The observed range of atmospheric pressure was, therefore, 1·324 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 49·4°, or 7·4° below the value for September, 1907. The arithmetical mean of the maximal and minimal readings was 49·9°, compared with a thirty-five years' (1871-1906) average of 49·5°. Using the formula, *Mean Temp. = Min. + (Max. - Min.) × .485*, the mean temperature was 49·8°, or 0·8° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871-1906, inclusive (49·3°). On the 5th the thermometer in the screen rose to 65·1°—wind, W.S.W.; on the 24th the temperature fell to 32·8°—wind, W. The minimum on the grass was 30·0° on the 16th.

The rainfall was 5·121 inches, distributed over 29 days; both the rainfall and the rainy days were much above the average. The average rainfall for October in the thirty-five years, 1871-1906, inclusive, was 2·870 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1876, also, 7·049 inches fell on 26 days. On the other hand, in 1904 only .454 inch fell on 11 days, in 1890 only .639 inch fell on but 11 days; in 1884, only .884 inch on but 14 days; and in 1868 only .888 inch on 15 days. In 1906 the rainfall was 3·818 inches on 22 days.

High winds were noted on 9 days, but attained the force of a gale on only two occasions—the 1st and 18th. The atmosphere was more or less foggy in Dublin on the 8th, 12th, 20th, 23rd, 24th, and 29th. A lunar rainbow was seen on the 19th. Solar halos were seen on the 4th, 16th, and 30th; there was a lunar halo on the 16th. Lightning occurred on the evenings of the 3rd, and 8th, and a thunderstorm on the 9th.

The rainfall in Dublin during the ten months ending October 31st amounted to 22·281 inches on 182 days, compared with 12·388 inches on 123 days during the same period in 1887 (the dry year), 20·466 inches on 145 days in 1901, 24·481 inches on 172 days in 1902, 27·282 inches on 196 days in 1903, 19·601 inches on 163 days in 1904, 20·462 inches on 161 days in 1905, 19·459 inches on 168 days in 1906, and a thirty-five years' (1871-1906) average of 23·050 inches on 164 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 29·565 inches, the range of atmospheric pressure being from 30·092 inches at 9 p.m. of the 4th to 28·848 inches at 9 p.m. of the 18th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50·3°. The arithmetical mean of the daily maximal and minimal temperatures was also 50·3°. The screened thermometers rose to 65·8° on the 6th, and fell to 33·0° on the 24th. On this latter date the grass minimum was 29·6°, but it was 27·9° on the 16th, and ground frost was felt on 3 nights. On the 5th the black bulb *in vacuo* rose to 93·6°. Rain fell on 27 days to the amount of 4·969 inches, the greatest fall in 24 hours being .730 inch on the 8th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was only 55·5 hours, of which 7·6 hours occurred on the 7th. The mean daily sunshine was but 1·8 hours. The mean temperature of the soil at 9 a.m., at a depth of 1 foot, was 51·6°; at a depth of 4 feet it was 55·8°. The subsoil temperature at 1 foot decreased from 58·5° on the 6th to 47·9° on the 27th. At 4 feet it decreased from 56·0° on the 1st, 2nd, and 3rd, to 51·2° on the 31st.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., returns the rainfall in October at 4·88 inches on 28 days, compared with 2·780 inches on 20 days in 1902, 3·820 inches on 25 days in 1903, only .290 inch on 12 days in 1904, 1·01 inches on 14 days in 1905, 3·43 inches on 24 days in 1906, and a twenty-two years' average (1885-1906) of 2·789 inches on 18·8 days. On the 14th .75 inch fell. Since January 1st, 1907, 21·30 inches of rain have fallen at this station on 166 days. In October, 1894, the rainfall at Cloneevin was 8·48 inches on 18 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·744 inches on 24 days, the greatest fall in 24 hours being .465 inch on the 30th. The mean shade temperature was 47·9°, the extremes being—highest, 67·0° on the 5th; lowest, 29° on the 15th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 30 days to the amount of 5·40 inches, compared with 2·40 inches on 21 days in 1901, 3·45 inches on 24 days in 1902, 3·38 inches on 25 days in 1903, .42 inch on 9 days in 1904, 1·34 inches on 15 days in 1905, and 4·52 inches on 24 days in 1906. The greatest measurement in 24 hours was .83 inch on the 8th. The mean temperature in the shade was 49·9°, the range being from 45° on the 6th to 35° on the 18th and 24th. The mean temperature of October was 50·6° in 1901, 50·9° in 1902, 50·8° in 1903, 51·6° in 1904, 47·1° in 1905, and 50·7° in 1906. Thunder and lightning occurred on the 8th and 9th.

Dr. Christopher Joynt, F.R.C.P.I., registered 5·625 inches of rain on 30 days at 21 Leeson Park, Dublin, the largest measurement in 24 hours being 7·60 inch on the 8th.

Miss Marial E. O'Sullivan recorded a rainfall of 5·620 inches on 26 days at White Cross, Stillorgan, Co. Dublin. The heaviest fall in 24 hours was 6·90 inch on the 5th. On the 19th 5·00 inch fell, and on the 18th 4·60 inch.

Mr. R. Cathcart Debbs, J.P., reports that the rainfall in October, at Knockdolian, Greystones, Co. Wicklow, amounted to 5·665 inches on 24 days. Of this quantity, 900 inch fell on the 30th. From January 1st, 1907, up to October 31st, rain has fallen at Knockdolian on 153 days to the total amount of 25·130 inches. In 1901 the rainfall in the corresponding ten months was 28·030 inches on 135 days; in 1902 it was 31·811 inches on 140 days; in 1903, 30·905 inches on 181 days; in 1904, 22·087 inches on 151 days; in 1905, 23·754 inches on 131 days; and in 1906, 20·998 inches on 135 days.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded 5·37 inches of rain on 27 days. The greatest fall in 24 hours was 90 inch on the 30th.

Dr. Francis P. Leyland reports a rainfall of 6·296 inches on 29 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow. The greatest fall in 24 hours was 1·412 inches on the 30th, a very heavy downpour taking place between 8 p.m. and 12 midnight of that day. The rainfall to October 31st at this station amounts to 26·738 inches on 174 days. The mean temperature for October was 49·9°, the maximum being 65·6° on the 5th, and the minimum 33·8° on the 16th.

Mr. William Miller states that in the City of Cork there were 27 days with rain during the month—total fall, 5·07 inches, which was 1·74 inches over the average. The greatest day's rain was that of the 20th—0·65 inch. The rainfall of the past ten months was 26·63 inches, which was 3·49 inches short of the average for the same period.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 6·43 inches on 28 days at the Rectory, Dunmanway, Co. Cork. There were many fine and bright days, the rain often falling at night. The heaviest falls in 24 hours were 91 inch on the 17th, 71 inch on the 18th, and 66 inch on the 20th. The rainfall for 10 months of 1907 is 42·31 inches, compared with 43·18 inches in 1905, and 43·29 inches in 1906.

At the Ordnance Survey Office, Phoenix Park, Dublin, the October rainfall was 5·202 inches on 27 days, compared with 5·551 inches on 30 days in 1906, 1·855 inches on 17 days in 1905, 6·80 inch on 10 days in 1904, and 2·339 inches on 24 days in 1903. The heaviest fall in 24 hours was 7·57 inch on the 8th. At the Royal Botanic Gardens, Glasnevin, rain fell on 29 days to the amount of 5·860 inches, the greatest daily fall being 97 inch on the 9th.

NOVEMBER.—A cool, comparatively quiet November, notable for a freedom from high winds in the Dublin district. The rainy period which had lasted through October, drew to a close on the 4th, after which date four consecutive rainless days were recorded. Comparatively fine autumnal weather held during the second week. Clouds spoiled the view of the transit of Mercury across the sun on Thursday, the 14th. The weather of the third week was cold and changeable, but on the whole it was fine, and the rainfall was slight. At 8 a.m. of Tuesday, the 19th, the barometer ranged from 28·28 inches at Reykjavik on the south-west coast of Iceland to 30·9 inches and upwards over central Russia. During the last week a series of deep atmospheric depressions came in from the Atlantic, causing heavy rains in all parts of the British Islands, sleet and hail in the northern districts.

In Dublin the arithmetical mean temperature (44·6°) was 0·7° below the average (45·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·0°. In the forty-three years ending with 1907, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1906 the M. T. was 47·5°.

The mean height of the barometer was 29·923 inches, or 0·068 inch above the corrected average value for November—namely, 29·856 inches. The mercury rose to 30·487 inches at 9 a.m. of the 30th, having fallen to 28·917 inches at 9 a.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·570 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·0°, or 5·4° below the value for October, 1907. The arithmetical mean of the maximal and minimal readings was 44·6°, compared with a thirty-five years' (1871-1905) average of 45·8°. On the 4th the thermometer in the screen rose to 56·1°—wind, S.S.W.; on the 25th the temperature fell to 29·3°—wind, W. The minimum on the grass was 24·5° on the 25th.

The rainfall was 2·684 inches on 14 days—the rainfall and rainy days were below the average. The average rainfall for November in the thirty-five years, 1871-1905, inclusive, was 2·720 inches, and the average number of rainy days was 17. In 1888, 6·459 inches fell on 25 days. On the other hand, the rainfall in 1896 was only 6·64 inch on nine days. In 1905 the rainfall was 3·551 inches on 19 days; in 1906, it was 1·562 inches on 17 days.

High winds were noted on only 3 days and never attained the force of a gale. The atmosphere was more or less foggy in Dublin on the 6th, 7th, 8th, 9th, 17th, 18th, 27th, and 30th. Solar halos were seen on the 17th and 30th. Lunar halos appeared on the 15th, 17th, and 22nd. There were lunar coronae on the 16th and 19th. There was a lunar rainbow on the evening of the 16th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 24·845 inches on 196 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·085 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 30·678 inches on 172 days in 1904, 24·013 inches on 180 days in 1905, 21·001 inches on 185 days in 1906, and a thirty-five years' average of 35·750 inches on 181 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 29·927 inches, the range of atmospheric pressure being from 30·484 inches at 9 a.m. of the 30th to 28·924 inches at 9 a.m. of the 28th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·8°. The arithmetical mean of the daily maximal and minimal temperatures was 45·3°. The screened thermometers rose to 57·8° on the 4th, and fell to 31·2° on the 25th. On the 19th the grass minimum was 28·7°. On the 1st the black bulb *in vacuo* rose to 77·0°. Rain fell on 13 days to the amount of 2·478 inches, the greatest fall in 24 hours being ·523 inch on the 25th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 33·9 hours, of which 4·4 hours occurred on the 10th. The mean daily sunshine was but 1·1 hours. The mean temperature of the soil at 9 a.m. was 45·7° at a depth of 1 foot; at a depth of 4 feet it was 49·4° at 9 a.m.

At Gloneerin, Killybeg, Co. Dublin, Mr. Robert O'B. Farlong, C.B., states that 2·41 inches of rain fell on 15 days, compared with a twenty-two years' (1885-1906) average of 2·975 inches on 16·2 days. The maximal fall in 24 hours was ·57 inch on the 27th. Since January 1, 1907, 23·71 inches of rain have fallen at this station on 182 days. The corresponding figures for 1901 were 26·10 inches on 181 days; 1902, 30·18 inches on 178 days; 1903, 30·05 inches on 203 days; 1904, 20·39 inches on 168 days; 1905, 25·95 inches on 157 days; and 1906, 20·22 inches on 183 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 2·895 inches on 14 days. Of the total quantity 7·90 inch fell on the 27th. From January 1st, 1907, up to November 30th, rain fell at Greystones on 167 days to the amount of 28·025 inches. The corresponding figures for 1901 were 31·425 inches on 147 days; 1902, 37·101 inches on 187 days; 1903, 33·070 inches on 193 days; 1904, 23·572 inches on 160 days; 1905, 27·515 inches on 150 days; and 1906, 27·638 inches on 140 days.

Dr. Francis P. Leyland reports a rainfall of 2·519 inches on 16 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow. The greatest fall in 24 hours was ·315 inch on the 25th. The rainfall to November 3rd at this station amounts to 29·547 inches on 190 days. The mean temperature for the month was 48·3°, the maximum being 54·4° on the 2nd and 14th, and the minimum 34·2° on the 25th.

The rainfall recorded at Clonsilla, Greystones, by Dr. Arthur G. Price was 2·67 inches on 13 days. The greatest fall in 24 hours was ·76 inch on the 27th.

Dr. Arthur S. Goff reports that at Lyndon, Dundrum, Co. Dublin, rain fell on 19 days to the amount of 3·10 inches, the greatest measurement in 24 hours being ·80 inch on the 1st. In November, 1901, the rainfall was 3·53 inches on 8 days; in 1902, it was 4·61 inches on 17 days; in 1903, 1·83 inches on 14 days; in 1904, 1·26 inches on 11 days; in 1905, 4·35 inches on 22 days; and in 1906, 1·80 inches on 15 days. The mean temperature in the shade was 44·8°, the range being from 54° on the 1st, 2nd, 4th and 14th to 32° on the 25th and 30th.

At White Cross, Stillorgan, Co. Dublin, Miss Muriel E. O'Sullivan measured 2·910 inches of rain on 16 days. The heaviest rainfall in 24 hours was ·550 inch on the 1st, but ·540 inch fell on the 27th.

Dr. Christopher Joynt, F.R.C.P.I., registered 2·810 inches on 16 days at Leeson Park, Dublin. The maximum in 24 hours was ·550 inch on the 1st. In November, 1905, 3·735 inches of rain had been recorded at this station, and in 1906, 1·485 inches.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·684 inches on 15 days—the greatest fall in 24 hours being ·313 inch on the 27th. The mean shade temperature was 40·6°, the extremes being—highest, 53·5° on the 14th; lowest, 24° on the 24th.

In the City of Cork Mr. William Miller returns the rainfall at 3·23 inches, or ·05 inch over the average for November. There were 16 rainy days. The heaviest fall in 24 hours was ·93 inch on the 3rd. Up to November 30th, the rainfall of 1907 amounted to 30·54 inches, that is 3·41 inches less than the average for eleven months of the year.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 4·29 inches on 19 days, the heaviest falls in 24 hours being ·90 inch on the 1st, ·78 inch on the 25th, and ·55 inch on the 27th. Thunder and lightning occurred on the evening of the 26th.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 16 days to the amount of 2·362 inches, the largest measurement in 24 hours being ·990 inch on the 27th. The total amount of sunshine was 67·8 hours, the most in one day being 8·7 hours on the 18th.

DECEMBER.—A dull, rainy, open month, but severely cold during the last seven days. On Sunday, the 1st, a large anticyclone still covered the British Isles, but the system was retreating steadily eastwards. Very unsettled conditions followed, as a succession of deep atmospheric depressions passed north-eastwards across the Atlantic between the British Isles and Iceland. The weather remained rough and very unsettled, with unusually frequent rainfalls until the 15th, when a brief

spell of fine, quiet, cold weather accompanied a ridge of high barometric pressure which drifted eastwards, across Ireland in the first instance and England later on. In the third week (16th to 23rd) a warm southerly air-current passed over western Europe, temperature exceeding the average throughout the United Kingdom—to the extent of more than 4° generally and more than 6° in the midland counties of England. A marked change occurred on Christmas Eve, with the setting in of a strong S.E. wind tangential to a vast continental anticyclone, within the limits of which intense cold prevailed in Northern and Central Europe. The last week was extremely severe, keen and strong easterly winds blowing over the whole country, with leaden skies and frequent showers of hail, sleet, and snow. The change was attended by a rainstorm of exceptional duration in the south of Ireland. At the Rectory, Dunmanway, Co. Cork, 4 inches of rain fell in the seventy-two hours ended at 9 a.m. of the 28th.

In Dublin the arithmetical mean temperature (43°F) was 1° above the average (42°F); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 42° . In the forty-three years ending with 1907, December was coldest in 1878 (M. T. = 32°), and in 1874 (M.T. = 36°); warmest in 1898 (M. T. = 47°), and in 1900 and 1906 (M. T. = 47°).

The mean height of the barometer was 29.630 inches, or 0.245 inch below the corrected average value for December—namely 29.675 inches. The mercury rose to 30.246 inches at 9 p.m. of the 23rd, having fallen to 28.782 inches at 3.30 p.m. of the 8th. The observed range of atmospheric pressure was, therefore, 1.464 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42° , or 1° below the value for November, 1907. Using the formula $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times .52$, the value was 43° or 1° above the average mean temperature for December, calculated in the same way, in the thirty-five years, 1871-1906, inclusive (42°). The arithmetical mean of the maximal and minimal readings was 43° , compared with a thirty-five years average of 42° . On the 20th the thermometer in the screen rose to 54.8° —wind, S.; on the 15th the temperature fell to 31.0° —wind, W. The minimum on the grass was 28.1° on the 15th. There was only one day of frost in the screen, but 9 nights of frost on the grass were recorded.

The rainfall was 3.149 inches, distributed over 23 days. The average rainfall for December in the thirty-five years, 1871-1906, was 2.25 inches, and the average number of rainy days was 17. The rainfall, therefore, was slightly below, while the rainy days were considerably in excess of, the average. In 1876 the rainfall in December was very large—3.666 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4.749 inches fell on as many as 27 days. On the other hand, in 1867, only .771 inch was measured on 13 days; in 1886, only .742 inch on 10 days; in 1882, only .795 inch on 10 days; and in 1871, only .797 inch on 15 days. In 1906, 1.906 inches of rain fell on 18 days.

High winds were noted on 14 days, and attained the force of a gale on five occasions—the 4th, 8th, 9th, 13th and 26th. The atmosphere was more or less foggy in Dublin on the 15th, 19th, and 23rd. Hail fell on the 4th, 13th, 26th, 27th, 28th, 30th and 31st; snow or sleet, on the 26th, 27th, 29th, 30th and 31st. A lunar halo was seen on the 22nd, and a lunar corona on the 12th. Thunder and lightning occurred on the 4th.

The rainfall in Dublin during 1907 amounted to 28.994 inches on 218 days, compared with 22.807 inches on 203 days in 1906, 25.277 inches on 193 days in 1905, 27.180 inches on 189 days in 1904, 31.401 inches on 228 days in 1903, 29.375 inches on 203 days in 1902, 26.075 inches on 179 days in 1901, only 16.801 inches on 160 days in 1897, and a thirty-five years' (1871-1906) average of 28.00 inches on 198 days.

Mr. William J. Good reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.633 inches, the range of atmospheric pressure being from 28.844 inches at 9 p.m. of the 8th to 30.246 inches at 9 p.m. of the 23rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42° . The arithmetical mean of the daily maximal and minimal temperatures was 43° . The screened thermometers rose to 56° on the 26th, and fell to 27.4° on the 24th. On this latter date the grass minimum was 31.2° . On the 11th the black bulb in *vacuo* rose to 70.1° . Rain fell on 17 days to the amount of 2.081 inches, the greatest fall in 24 hours being .530 inch on the 13th. The duration of bright sunshine, according to the Campbell-Stokes recorder was 236 hours, of which 37 hours occurred on the 5th. The mean daily sunshine was .08 hour. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41.8° ; at a depth of 4 feet it was 45.3° .

Mr. R. Cathcart Dobbs, J.P., reports that, at Knockdolian, Greystones, Co. Wicklow, the rainfall in December was 2.665 inches on 30 days, compared with 1.860 inches on 11 days in 1906, 1.405 inches on 10 days in 1905, 1.890 inches on 15 days in 1904, 2.880 inches on 18 days in 1903, and 2.920 inches on only 11 days in 1902. Of the total amount .440 inch fell on the 19th. From January 1st to December 31st, 1907, rain fell at Knockdolian on 187 days, to the total amount of 30.390 inches. The corresponding figures for 1901 were 34.750 inches on 186 days; 1902, 40.321 inches on 168 days; 1903, 35.900 inches on 211 days; 1904, 35.462 inches on 175 days; 1905, 28.920 inches on 180 days; and 1906, 24.488 inches on 181 days.

Dr. Arthur G. Price reports a rainfall of 3.03 inches on 23 days at Clonsilla, Greystones, Co. Wicklow, the heaviest fall in 24 hours being .50 inch. on the 7th. The mean temperature of December was 40° , the extremes being—highest, 51° on the 8th; lowest, 32° on the 5th, 6th, 11th, 12th, 13th, 14th, 22nd and 23rd. The rainfall during 1907 at Clonsilla amounted to 30.09 inches on 199 days. The greatest daily measurement was 1.49 inches on May 6.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at 3'115 inches on 22 days, '455 inch being measured on the 7th, and '450 inch on both the 8th and the 19th. The total rainfall for the year was 28'575 inches on 219 days, compared with 28'386 inches on 197 days in 1906.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was 2'303 inches on 17 days. The greatest fall in 24 hours was '535 inch on the 19th. The mean shade temperature was 38'8°, the extremes being—highest, 50° on the 7th; lowest 25° on the 14th. The total rainfall for 1907 was 25'352 inches on 193 days.

The Rev. Arthur Wilson, M.A., reports that rain fell on 27 days at the Rectory, Dunmanway, Co. Cork, to the large amount of 11'50 inches. The heaviest falls were 1'71 inches on the 27th, 1'88 inches on the 26th, 1'33 inches on the 7th, 1'03 inches on the 19th, and '66 inch on the 25th. Rain fell almost incessantly from the morning of Christmas Day till 9.15 a.m. of the 28th. The rainfall for the year was 58'40 inches on 244 days. In 1906 it had been 56'72 inches on 211 days, and in 1905, 50'55 inches on 228 days.

Dr. Christopher Joynt, F.R.C.P.I., recorded 2.132 inches of rain on 24 days at 21 Leeson Park, Dublin. On the 19th, '493 inch was recorded, and on the 7th the measurement was '300 inch. The total rainfall for the year was 27'365 inches on 217 days, compared with 23'112 inches on 198 days in 1906.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Clonevin, Killiney, at 2'23 inches on 21 days. The maximal fall in 24 hours was '35 inch on the 19th. The average December rainfall of the 22 years (1885-1906) was 2'346 inches on 16'8 days. Since January 1, 1907, 25'94 inches of rain have fallen at this station on 203 days, compared with 22'34 inches on 201 days in 1906.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 23 days to the amount of 2'68 inches, '49 inch being measured on the 19th. Temperature ranged from 54° on the 21st to 31° on the 4th. The mean shade temperature was 42'1° Fahrenheit. In 1903, 2'21 inches of rain fell on 20 days; in 1904, 2'14 inches on 21 days; in 1906, 1'71 inches on 16 days; and in 1905, 1'79 inches on 17 days. The total rainfall in 1907 at Lynton was 26'36 inches on 219 days, compared with 25'61 inches on 205 days in 1906.

At Cork, according to Mr. W. Miller, the December rainfall was 7'02 inches on 26 days, the measurement being 2'57 inches in excess of the average. The greatest daily rainfall was 1'07 inches on the 27th. The year's rainfall at this station was 37'58 inches on 224 days, the total being 0'62 under the average, while the rainy days were 27 in excess.

The rainfall at the Ordnance Survey Office, Phoenix Park, Dublin, was 2'165 inches on 20 days, the maximum in 24 hours being '670 inch on the 19th. The total amount of sunshine was 422 hours; the largest daily amount was 5'5 hours on the 5th. The thermometer fell to 25'7° in the screen on the night of the 24th.

RAINFALL IN 1907.

At 40 Fitzwilliam Square, Dublin.

Rain Gauge:—Diameter of Funnel, 8 in. Height of top—above ground, 1 ft. 4 in.;
above sea level, 50 ft.

| Month. | Total Depth. | Greatest Fall in 24 hours. | | Number of Days on which "it or more fell." | Month. | Total Depth. | Greatest Fall in 24 hours. | | Number of Days on which "it or more fell." |

* Maximum.

The rainfall was 28.994 inches, or 1.006 inches less than the average annual measurement of the thirty-five years, 1871-1905, inclusive—viz., 29.000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16.601 inches—the only approach to this measurement in Dublin being in 1870, when only 20.859 inches fell; in 1884, when the measurement was 20.467 inches; and in 1883, with its rainfall of 20.493 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32.966 inches—or as nearly as possible double the fall of 1887—fell on 239 days. In 1900 the rainfall was 34.338 inches, or 6.338 inches in excess of the average for the thirty-five years, 1871-1905. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35.586 inches fell on 238 days, and in 1880, when 34.512 inches were measured on, however, only 188 days. In 1906 the rainfall was 22.967 inches on 203 days.

In 1907 there were 218 "rain-days" or days upon which not less than .005 inch of rain (five-thousandths of an inch) was measured. This was 29 over the average number of rain-days, which was 198 in the thirty-five years, 1871-1905, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

In 1905 the rainfall in 24 hours, from 9 a.m. to 9 a.m., on only one occasion exceeded one inch—namely, on August 25th, but it then amounted to 3.436 inches, the greatest daily fall registered in Dublin since these records began. On only one occasion in 1907 did one inch of rain fall on a given day in Dublin—viz., May 6th, 1.115 inches.

In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2.037 inches. In 1902, 1.342 inches fell on July 25th, and 2.075 inches on September 2nd. In 1903 the maximal daily rainfall was .968 inch on September 10th. In 1904, 1.092 inches fell on May 31st, and 1.197 inches on September 12th. The excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3.436 inches in Dublin (Fitzwilliam Square). It was the ninth occasion only since 1865—that is, in 42 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2.432 inches); October 27th, 1880 (2.736 inches); May 28th, 1892 (2.056 inches); July 24th, 1896 (3.020 inches); August 6th, 1899 (2.227 inches); August 2nd, 1900 (2.135 inches); November 11th, 1901 (2.037 inches); and September 2nd, 1903 (2.075 inches). On no previous occasion within the past 42 years had 3 inches or upwards been measured.

Included in the 218 rainy days in 1907 are 20 on which snow or sleet fell, and 29 on which there was hail. In January hail was observed on 6 days, in February on 3 days, in March on 2 days, in April on 5 days, in May on 2 days, in June on 3 days, in August on one day, and in December on 7 days. Snow or sleet fell on 7 days in January, 5 days in February, one day in March, 2 days in April, and 5 days in December. Thunderstorms occurred once in May, October, and December, twice in June, and 3 times in July. Thunder was heard without visible lightning once in March and April, and 3 times in July. Lightning was seen once in May, August, September, and December, twice in October, and 3 times in July.

The rainfall in the first six months was 12'336 inches on 103 days. The rainfall exceeded 5 inches in October (5'131 inches), the rain-days being 29.

The rainfall was distributed quarterly as follows:—3'666 inches fell on 42 days in the first quarter, 5'670 inches on 66 days in the second, 4'204 inches on 45 days in the third, 2'854 inches on 45 days in the fourth quarter.

More or less fog prevailed on 50 occasions—4 in January, 7 in February, 7 in March, 4 in April, 1 in May, 1 in July, and in August, 6 in September, 5 in October, 8 in November, and 5 in December. High winds were noted on 117 days—18 in January, 9 in February, 14 in March, 9 in April, 10 in May, 17 in June, 3 in July, 15 in August, 2 in September, 9 in October, 3 in November, and 14 in December. The high winds amounted to gales (force 7 or upwards, according to the Beaufort scale) on 30 occasions—3 in January, 6 in February, 7 in March, 1 in April, 2 in May, 3 in June, 1 in August, 2 in October, and 5 in December.

Solar halos were seen on 21 occasions, a lunar halo on 11 nights. Aurora borealis was seen twice in February and in March, once in August.

Mr. Robert O'Brien Farlong, M.A. C.B., writes relative to the rainfall at Clonevin, Killiney:—The total number of inches measured in 1907 was 25'94 on 203 days, compared with 22'34 inches on 201 days in 1906.

The rainfall of 1907 is 1'81 inches below the average of 22 years (1885-1906)—viz., 27'75 inches.

The number of days on which '01 inch or upwards fell—viz., 203, is 17'6 in excess of the average for the same period—viz., 185'2 days.

The number of rainy days has been exceeded in only 3 years—viz., 1897, 204 days; 1900, 205 days; and 1903, 219 days.

The greatest amount measured in any month during 1907 was 4'98 inches on 28 days in October; the smallest, '52 inch, on 7 days in September.

The heaviest fall in 24 hours was on May 6th, when 1'17 inches fell.

Snow, sleet, or hail, was observed on 15 days.

Abstract of Meteorological Observations taken at Dublin (40 Fitzwilliam-square, West) during the Year 1907.

NOTE.—The temperature given above were deduced from the actual and reduced readings of the thermometer. For the years 1887 to 1895, inclusive, Kew's Formula was used, viz. — Mean Temperature in $^{\circ}\text{F.} = (\text{Max.} - \text{Min.}) \div 41$; for subsequent years the formula used was the following:—Mean Temperature in $^{\circ}\text{F.} = (\text{Max.} - \text{Min.}) \div 5$, the \div sign being 0 varying from north to south.

ABSTRACT OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Sc.D., F.R.S.

In compiling the following Table (pp. 172-175) the stations have been grouped into two Districts, namely 1, Ireland, North; 2, Ireland, South. Each District is represented by six stations.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are provided for in the Table. The wind observations at Valencia are based on the records of a standard Robinson anemometer (factor 2.2). Velocities between 15 and 33 miles in the hour have been entered in the Tables as strong winds, velocities of 33 miles in the hour, or above, as gales. At the remaining stations the wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking these results.

The stations selected, with the names of the Observers are shown below.

LIST OF STATIONS AND OBSERVERS.

| Station. | Observer. |
|------------------------------------|---|
| IRELAND, NORTH:— | |
| Malla Road, | Meteorological Office. |

* The Hours of Observations are 9 a.m. and 3 p.m., local time, at all the Stations except Mullin Road, Donaghadee, Malinbeg, and Rath's Point, A.M., and where also Greenwich time is kept. The means under Barometric, Apparent, and Cloud No. Mullin Road, Donaghadee, Malinbeg, and Rath's Point, are for the Quarter and for the Year.
† The Apparent and Barometric means are based on observations as follows:—Rainfall 30 years, 1875-1904; Temperature 36 years, 1875-1910; Sunshine 30 years, 1881-1910.
‡ The number of days of rain are given in the table.
§ The Sunshine Values for Dublin are obtained at the Meteorological Observatory on the Phoenix Park, and the Earth Temperature at Trinity College.

[illegible]

No. 14,855.

DUBLIN CASTLE,

18th July, 1908.

Sir,

I have to acknowledge the receipt of your letter of the 16th instant, forwarding, for submission to His Excellency the Lord Lieutenant, your detailed Annual Report on Marriages, Births, and Deaths for the Year 1907.

I am,

Sir,

Your obedient servant,

J. B. DOUGHERTY.

The Registrar-General,

Charlemont House,

Dublin.

DIAGRAM No. 1—Showing the respective rates per 1,000 of the Population, represented by the number of Marriages, Births and Deaths, registered in Ireland, in each of the Twenty Years, 1888-1907 and by the number of Emigrants enumerated in the same years

CAUSES OF DEATH

TUBERCULOSIS.

DIAGRAM No. 2.—Showing the Death-Rate in Ireland, as compared with England and Scotland, during each of the forty-four years 1850-1893.

DIAGRAM No. 4—Showing the Proportion of Deaths registered from Tuberculosis at each age period, per 1,000 living at those ages, in Ireland, in England and Wales and in Scotland during the year, 1905.

IRELAND ———— ENGLAND ———— SCOTLAND ———— (To Exce page XXXV)

DIAGRAM No. 5—Showing in each of Four General Classes* the mortality per 1,000 of the Population in 1901, represented by deaths from Tuberculous Phthisis registered in the Dublin Registration Area during each of the Years, 1901—1907.

DIAGRAM No. 6—Showing the Proportion of Deaths of Infants under One Year of Age, per 1,000 Births, in the Dublin Registration Area, and in the Cities of Belfast and of Cork, as compared with that in Large Towns* of England and 8 of the Principal Towns of Scotland, during each of the Years, 1901—1907.

*The figure for 1901 relating to the Large English Towns embraces returns for 33 Towns, those for the Years 1902-7 refer to 76 Towns.
